**Handbook of Global Logistics** James H. Bookbinder, 2012-10-06

Global logistics entails tradeoffs in facility location, distribution networks, the routing and scheduling of deliveries by different modes of travel (e.g. air, water, truck, rail), procurement, and the overall management of international supply chains. In an increasingly global economy, then, logistics has become a very important matter in the success or failure of an organization. It is an integral part of supply chain management that involves not just operations management considerations but production engineering and regional science issues as well. As Director of the prestigious Waterloo Management of Integrated Manufacturing Systems Research Group (WATMIMS) which specializes in logistics and manufacturing, Jim Bookbinder is uniquely qualified to edit a handbook on global logistics. He has aligned a set of prominent contributors for this volume. The chapters in the Handbook are organized into discrete sections that examine modes of logistics in particular countries; operations within a free trade zone; innovative features impacting international logistics; case studies of specific companies; and a look toward the future. Contributors are from the Americas, Europe, and Asia, and they push the state of the art in areas such as trade vs. security, border issues, cabotage within NAFTA, green logistics corridors within the EU, inland ports, direct-to-store considerations, and all the questions that need to be confronted in any given region. This will certainly appeal to researchers and practitioners alike and could serve as required or

Kaufmann, 2018-03-23 Tuberculosis TB remains the prime bacterial infection worldwide with 10.4 million infections and a death toll of 1.7 million people in 2016 according to WHO statistics. Tuberculosis is caused by members of the *Mycobacterium tuberculosis* complex facultative intracellular bacteria able to thrive within otherwise potent innate defense cells the macrophages. In a world of increasing numbers of infections with drug resistant *M. tuberculosis* strains the daunting race between developing new therapeutics and emerging resistant strains will hardly produce a winner. This cycle can only be broken by enhancing population wide immune control through a better vaccine as the only one currently in use *M. bovis* Bacillus Calmette Guérin (BCG). The protective efficacy of BCG against pulmonary tuberculosis in all age groups is dissatisfying and geographically highly diverse with the tropical areas showing the lowest efficacy rates. Despite worldwide vaccination coverage the impact of BCG on the steep decrease of tuberculosis incidence rates in the developed world seems therefore questionable and can rather be attributed to improved social housing and nutritional conditions, better health care surveillance and treatment systems. The last 15 years saw tremendous efforts to improve vaccination strategies against tuberculosis. Different paths of vaccine approaches were followed including genetically improved BCG strains, attenuated *M. tuberculosis* variants, recombinant viral vectors and subunit vaccine candidates combined with novel more potent adjuvants. With the first novel vaccine candidates being evaluated in clinical phases II and III and initial results chastening the expectations a critical reassessment of all candidates is inevitable. Here we assembled experts to review and assess the current status of novel anti tuberculosis vaccine candidates, their efficacy and prospects for implementation as well as the pitfalls and possible measures for improvement.      **Bovine Tuberculosis -**

**International Perspectives on Epidemiology and Management** Andrew W. Byrne, Adrian R. Allen, Daniel J. O'Brien, Michele A. Miller, 2019-10-17 Bovine tuberculosis (bTB) is a significant zoonotic pathogen with a global distribution and a considerable economic impact. It has a notoriously complex epidemiology varying by affected region and often involving multiple host species. Here we present an international collection of papers that address both national and international factors impacting on the control of bovine tuberculosis. We hope this Research Topic will provide a forum which may generate a greater understanding of the disease in a wider context and inform future eradication efforts through the design of more effective interventions.      **Book of Abstracts of the 47th Annual Meeting of the European Association for Animal Production**, 1996-09 The Book of Abstracts represents the main publication of the 47th Annual Meeting of the European Association for Animal Production in Lillehammer from 25-29 August 1996.
