Production Ecology Of Ants And Termites:

Production Ecology of Ants and Termites Michael Vaughan Brian, 1978 This study concentrates on the production ecology of ants and termites. Ants and termites are highly socialised and their groupings in their most developed form enable them to function as large organisms comparable with the larger mammals in their influence in ecosystems

Biology of Termites: a Modern Synthesis David Edward Bignell, Yves Roisin, Nathan Lo, 2010-10-20 Biology of Termites a Modern Synthesis brings together the major advances in termite biology phylogenetics social evolution and biogeography. In this new volume David Bignell Yves Roisin and Nathan Lo have brought together leading experts on termite taxonomy behaviour genetics caste differentiation physiology microbiology mound architecture biogeography and control. Very strong evolutionary and developmental themes run through the individual chapters fed by new data streams from molecular sequencing and for the first time it is possible to compare the social organisation of termites with that of the social Hymenoptera focusing on caste determination population genetics cooperative behaviour nest hygiene and symbioses with microorganisms. New chapters have been added on termite pheromones termites as pests of agriculture and on destructive invasive species

Intestinal Microorganisms of Termites and Other Invertebrates Helmut König, 2006 This is the first work to focus on microbes in gut systems of soil animals. Beginning with an overview of the biology of soil invertebrates the text turns to the gut microbiota of termites which are important soil processors in tropical and subtropical regions. Coverage extends to intestinal microbiota of such other litter decomposers as earthworms springtails millipedes and woodlice. Thoroughly illustrated including color photographs

Palaeoecology of Africa and the Surrounding Islands K. Heine, J. Runge, 2001-01-01 These papers derive from a workshop on Quaternary Sedimentary Records in Central Africa and their Palaeoenvironmental Interpretation held at the 15th INQUA Congress. They mainly cover the Late Quaternary to Holocene climate and environmental history of today's rainforest regions

Biology and Management of the Formosan Subterranean Termite and Related Species Nan-Yao Su, Chow-Yang Lee, 2023-12-22 The Formosan subterranean termite *Coptotermes formosanus* is the most destructive and invasive termite species globally. It is also the only termite species listed in the world's 100 worst invasive alien species of the Global Invasive Species Database. Annually its infestation costs more than 4 billion in control and damage repairs in the USA alone. This book is the first comprehensive resource drawing on all the literature on *C. formosanus* since Tokuichi Shiraki first described the species in 1909. The book covers the worldwide distribution of this species its biogeography and how it has dispersed from its native range in southern China and Taiwan to different parts of the world. It describes its present taxonomic status and discusses the species biology ecology foraging behavior physiology chemical ecology and its association with symbionts. From a practical standpoint the authors address all of the various management options for this species such as baits soil termiticides wood preservatives inspection and detection technologies.

and Integrated Pest Management IPM approaches Lastly there are chapters dedicated to another important destructive species *Coptotermes gestroi* the Asian subterranean termite and the recently discovered *C formosanus C gestroi* hybrids This important book is an essential and valuable reference for researchers graduate students pest management professionals chemical manufacturer personnel building and property managers and others It provides readers with a comprehensive understanding of the biology and management of the Formosan subterranean termite and the Asian subterranean termite

Evolution of the Insects David Grimaldi, Michael S. Engel, 2005-05-16 Insects are the most diverse group of organisms in the 3 billion year history of life on Earth and the most ecologically dominant animals on land This book chronicles for the first time the complete evolutionary history of insects their living diversity relationships and 400 million years of fossils Whereas other volumes have focused on either living species or fossils this is the first comprehensive synthesis of all aspects of insect evolution The book is illustrated with 955 photo and electronmicrographs drawings diagrams and field photos many in full colour and virtually all of them original The book will appeal to anyone engaged with insect diversity professional entomologists and students insect and fossil collectors and naturalists

Soil Biodiversity in Amazonian and Other Brazilian Ecosystems F. M. S. Moreira, J. O. Siqueira, L. Brussaard, 2006 The loss of biological diversity has become an increased concern over recent years and is now enshrined in international conventions Most biodiversity in fact occurs in the soil Soil organisms especially bacteria fungi and soil invertebrates play a major role in the formation of soil structure and are primary agents of decomposition and are drivers of nutrient cycling and hence agricultural production This book reviews soil biodiversity in one of the key biodiversity hotspots of the world i e the Amazon and nearby regions of Brazil It covers both the tropical savannah and rain forests The work reported is based on a project Conservation and Sustainable Management of Below Ground Biodiversity executed by TSBF CIAT with co financing from the Global Environment Facility GEF and implementation support from the United Nations Environment Programme UNEP The book represents a major contribution to the literature and will interest those in biodiversity conservation soil science and ecology and biodiversity conservation

General Technical Report SE, 1995 *Biodiversity and Coarse Woody Debris in Southern Forests*, 1996 **The Biology of Social Insects** Michael D. Breed, Charles D. Michener, Howard E. Evans, 2019-06-25 In this book internationally known experts provide a comprehensive view of current knowledge of social insect biology including much previously unpublished information Particular emphasis is given to the relationships between social insects and humans sections are devoted to economically important social insects pollination foraging and the role of insects in ecosystems and agroecosystems The authors also discuss communication behavior and caste within insect colonies A special section focuses on the neurobiology of social insects A series of papers considers the presocial insects which live in family groups but without caste differences Also well represented are the fields of sociobiology and the origins and evolution of social behavior The book will be valuable to agricultural scientists as well as to entomologists sociobiologists ecologists ethologists and natural

historians Endocrinologists and neurobiologists will also find important new material

The Fire Ants Walter R. Tschinkel, 2013-03-11 Walter Tschinkel's passion for fire ants has been stoked by over thirty years of exploring the rhythm and drama of *Solenopsis invicta*'s biology. Since South American fire ants arrived in Mobile, Alabama in the 1940s, they have spread to become one of the most reviled pests in the Sunbelt. In *Fire Ants*, Tschinkel provides not just an encyclopedic overview of *S. invicta*—how they found colonies, construct and defend their nests, forage and distribute food, struggle among themselves for primacy, and even relocate entire colonies—but a lively account of how research is done, how science establishes facts, and the pleasures and problems of a scientific career. Between chapters detailed enough for experts but readily accessible to any educated reader, interludes provide vivid verbal images of the world of fire ants and the people who study them. Early chapters describe the several failed and heavily politically influenced eradication campaigns, and later ones the remarkable spread of *S. invicta*'s polygynous form, in which nests harbor multiple queens and colonies reproduce by budding. The reader learns much about ants, the practice of science, and humans' role in the fire ant's North American success.

The Ants Bert Hölldobler, Edward O. Wilson, 1990 This landmark work is a thoroughgoing survey of one of the largest and most diverse groups of animals on the planet. Hölldobler and Wilson review in exhaustive detail virtually all topics in the anatomy, physiology, social organization, ecology, and natural history of the ants.

East African Ecosystems and Their Conservation T. R. McClanahan, T. P. Young, 1996 East Africa is one of the most diverse and interesting tropical areas on the planet. It is home not only to the last great megafaunal assemblage but also to human populations with the highest growth rates. This book draws on the expertise of leading ecologists, each intimately familiar with a particular set of East African ecosystems, to provide the first in-depth and integrated account of the ecology, management, threats, and conservation of these diverse ecosystems. Summarizing the tremendous wealth of scientific research that has come out of East Africa in the last few decades, each chapter analyses a given ecosystem type, taking the reader through the basics of its ecology, its historical use, and misuse by humans, and its prospects for conservation. Throughout the book, linkages and similarities among ecosystems are emphasized; the historical and contemporary role of humans in shaping these ecosystems is considered; fundamental principles of ecology are considered; and interesting case studies are highlighted. Students and researchers in ecology, conservation biology, and environmental sciences will find this book useful in their work.

Applied Myrmecology Robert K. Vander Meer, Klaus Jaffe, Aragua Cedeno, 2019-04-23 Ants have always fascinated the nature observer. Reports from ancient Egypt and Mesopotamia indicate that ants interested humans long ago. Myrmecology as a science had its beginning in the last century with great naturalists like André-Marie de Lacaze de Ménéville, Emery Escherich, Fabre, Fields, Forel, Janet, Karawaiew, McCook, Mayr, Smith, Wasmann, and Wheeler. They studied ants as an interesting biological phenomenon with little thought of the possible beneficial or detrimental effects ants could have on human activities; see Wheeler 1910 as an example. When Europeans began colonizing the New World, serious ant problems occurred. The first reports of pest ants came from Spanish and

Portuguese officials of the fifteenth and sixteenth centuries in Trinidad The West Indies Central America and South America Leaf cutting ants were blamed for making agricultural development almost impossible in many areas These ants *Atta* and *Acromyrmex* species are undoubtedly the first ants identified as pests and may be considered to have initiated interest and research in applied myrmecology Mariconi 1970 *The Food Web of a Tropical Rain Forest* Douglas P. Deneubourg, Jacques M. Pasteels, 2012-12-06 Claire Detrain Jean Louis Deneubourg and Jacques Pasteels Studies on insects have been pioneering in major fields of modern biology In the 1970 s research on pheromonal communication in insects gave birth to the discipline of chemical ecology and provided a scientific frame to extend this approach to other animal groups In the 1980 s the theory of kin selection which was initially formulated by Hamilton to explain the rise of eusociality in insects exploded into a field of research on its own and found applications in the understanding of community structures including vertebrate ones In the same manner recent studies which decipher the collective behaviour of insect societies might be now setting the stage for the elucidation of information processing in animals Classically problem solving is assumed to rely on the knowledge of a central unit which must take decisions and collect all pertinent information However an alternative method is extensively used in nature problems can be collectively solved through the behaviour of individuals which interact with each other and with the environment The management of information which is a major issue of animal behaviour is interesting to study in a social life context as it raises additional questions about conflict cooperation trade off s Insect societies have proven particularly open to experimental analysis one can easily assemble or disassemble them and place them in controllable situations in the laboratory Sustainable Insect Pest Management S. Ignacimuthu, S. Jayaraj, 2005 Overexploitation of natural resources and excessive chemicalization of agriculture have led to poor sustainability of farm production Indiscriminate use of agricultural chemicals has resulted in problems of pest resurgence and development of resistance on the one hand and has posed serious problems of environmental contamination through residues in food chain on the other hand The importance of achieving food production through the use of ecofriendly sustainable pest management

techniques is being realized more and more in the recent past Eminent scientists from different research institutions have looked into this aspect seriously and have come up with many enlightening suggestions compiled together in this book
