*The Art of Agent-oriented Modeling* Leon Sterling, Kuldar Taveter, 2009 The Art of Agent Oriented Modeling is an introduction to agent oriented software development for students and for software developers who are interested in learning about new software engineering techniques Foreword

*Production System Models of Learning and Development* David Klahr, Pat Langley, Robert Neches, 1987 Cognitive psychologists have found the production systems class of computer simulation models to be one of the most direct ways to cast complex theories of human intelligence There have been many scattered studies on production systems since they were first proposed as computational models of human problem solving behavior by Allen Newell some twenty years ago but this is the first book to focus exclusively on these important models of human cognition collecting and giving many of the best examples of current research In the first chapter Robert Neches Pat Langley and David Klahr provide an overview of the fundamental issues involved in using production systems as a medium for theorizing about cognitive processes emphasizing their theoretical power The remaining chapters take up learning by doing and learning by understanding discrimination learning learning through incremental refinement learning by chunking procedural learning and learning by composition A model of cognitive development called BAIRN is

described and a final chapter reviews John Anderson's ACT theory and discusses how it can be used in intelligent tutoring systems including one that teaches LISP programming skills. In addition to the editors, the contributors are Yuichiro Anzai, Hokkaido University, Japan; Paul Rosenbloom, Stanford; and Allen Newell, Carnegie Mellon. Stellan Ohlsson, University of Pittsburgh; Clayton Lewis, University of Colorado Boulder; Iain Wallace, and Kevin Bluff Deakon, University Australia; and John Anderson, Carnegie Mellon. David Klahr is Professor and Head of the Department of Psychology at Carnegie Mellon University. Pat Langley is Associate Professor, Department of Information and Computer Science, University of California, Irvine, and Robert Neches is Research Computer Scientist at University of Southern California. Information Sciences Institute. Production System Models of Learning and Development is included in the series Computational Models of Cognition and Perception, edited by Jerome A. Feldman, Patrick J. Hayes, and David E. Rumelhart. A Bradford Book. Enterprise Modeling Kurt Sandkuhl, Janis Stirna, Anne Persson, Matthias Wißotzki, 2014-09-15. Enterprise modeling (EM) methods and techniques are indispensable for understanding the present situation of an enterprise and for preparing for its future, particularly in times of continuous organizational change, an increasing pace of innovation, new market challenges, or technology advances. The authors combine a detailed description of the 4EM methodology with their concrete experience gathered in projects. Their book addresses the modeling procedure, modeling language, and modeling practices in a uniquely integrated approach. It provides practical advice on common challenges faced by enterprises and offers a flexible EM method suitable for tackling those challenges. Much of the work presented stems from actual research projects and has been validated with scientific methods. The 4EM methodology has proven its practical value in a large number of successful development and/or change management projects in industry and the public sector. The book was written for anyone who wants to learn more about EM with a specific focus on how to do it in practice and/or how to teach it. Its main target audience thus includes instructors in the field of EM or business information systems, students in Information Systems or Business Administration, and practitioners working in enterprise or change management. The authors describe a clear reading path for each of these audiences and complement the work with a set of slides and further teaching material available under [www.4em-method.com](http://www.4em-method.com).

**Proceedings of the 2024 3rd International Conference on Information Economy, Data Modelling and Cloud Computing (ICIDC 2024)** Evan Poh Hock Lau, Aslina Baharum, Ali Hussein Wheeb, Lei Chen, 2024-08-30. This is an open access book. ICIDC 2024 is to bring together innovative academics and industrial experts in the field of Information Economy, Data Modeling, and Cloud Computing research to a common forum. The primary goal of the conference is to promote research and developmental activities in Information Economy, Data Modeling, and Cloud Computing research, and another goal is to promote scientific information interchange between researchers, developers, engineers, students, and practitioners working all around the world. The conference will be held every year to make it an ideal platform for people to share views and experiences in Information Economy, Data Modeling, and Cloud Computing research and related areas. 2024 3rd International

Conference on Information Economy Data Modeling and Cloud Computing ICIDC 2024 is scheduled to be held in Dalian China from June 21-23, 2024. Big data provides rich resources for modeling in the economic field. Through data modeling, we can obtain the dynamic change trend of various indicator data, analyze the relationship between elements in the process of related economic activities, and can reveal the relationship that is difficult to show by traditional technology. Therefore, how to use big data information to model and study the development trend of economic operation plan is of great significance. This conference will continue to focus on the application of big data in the economic field and conduct more in-depth research in combination with cloud computing.

**Operations Research: Introduction To Models And Methods** Richard Johannes Boucherie, Henk Tijms, Aleida Braaksma, 2021-10-26. This attractive textbook with its easy-to-follow presentation provides a down-to-earth introduction to operations research for students in a wide range of fields such as engineering, business analytics, mathematics, and statistics, computer science, and econometrics. It is the result of many years of teaching and collective feedback from students. The book covers the basic models in both deterministic and stochastic operations research and is a springboard to more specialized texts, either practical or theoretical. The emphasis is on useful models and interpreting the solutions in the context of concrete applications. The text is divided into several parts. The first three chapters deal exclusively with deterministic models, including linear programming with sensitivity analysis, integer programming, and heuristics and network analysis. The next three chapters primarily cover basic stochastic models and techniques, including decision trees, dynamic programming, optimal stopping, production planning, and inventory control. The final five chapters contain more advanced material, such as discrete-time and continuous-time Markov chains, Markov decision processes, queueing models, and discrete event simulation. Each chapter contains numerous exercises, and a large selection of exercises includes solutions.

Products and Services Igor Fuerstner, 2010-11-02. Today's global economy offers more opportunities but is also more complex and competitive than ever before. This fact leads to a wide range of research activity in different fields of interest, especially in the so-called high-tech sectors. This book is a result of widespread research and development activity from many researchers worldwide, covering the aspects of development activities in general as well as various aspects of the practical application of knowledge.

**Information Systems: Modeling, Development, and Integration** Jianhua Yang, Athula Ginige, Heinrich C. Mayr, Ralf-D. Kutsche, 2009-04-17. UNISCON 2009 United Information Systems Conference was the third conference in the series that is based on the idea to pool smaller but highly interesting scientific events on information systems into one large conference. Here, people from different scientific backgrounds can present their research results, share their ideas, and discuss future trends in these various areas. UNISCON 2009 was held in Sydney, Australia, in the University of Western Sydney Campbelltown Campus. In 2009, the following scientific events were held under

the umbrella of UNISCON 2009 th 8 International Conference on Information Systems Technology and Its Applications ISTA 2009 th 8 International Workshop on Conceptual Modelling Approaches for e Business eCOMO 2009 Second Workshop on Model Based Software and Data Integration MBSDI 2009 We received 115 papers for the three events Papers were submitted from over 25 countries After a rigorous review process 39 papers were accepted as full papers and 14 papers as short papers for presentation at the conference and published in these proceedings In addition to the above three events we also organized a Doctoral Consortium to provide a forum for doctoral students to get feedback from experts in the area about their research projects

Fundamentals of Production Logistics Peter Nyhuis,Hans-Peter Wiendahl,2008-09-19 At last here is what logistics researchers have been waiting for a book that comprehensively encapsulates for the first time the fundamentals of modeling Logistic Operating Curves for production and storage processes The text includes information on how they can be derived and calculated based on standard operating data In doing so the authors clearly demonstrate the mutual dependencies between the often contradictory logistic objectives i e on the one hand low throughput times and high delivery reliability and on the other hand low WIP levels and high rates of utilization Moreover they also explain how these objectives can be improved using the Logistic Operating Curve Theory and why this method thus provides an interesting alternative to simulations
