The Production of New Potato Varieties G. J. Jellis, D. E. Richardson, 1987-08-28 The potato is one of the world's most important food crops. It produces more nutritious food from less land in a shorter time than any other major crop. Therefore, advances in the production of new potato varieties will greatly contribute to the world's food supply. The book outlines strategies used in the breeding and testing of potato varieties. It considers prospects for varietal improvement using both traditional and new techniques including genetic manipulation, tissue culture, and protoplast fusion. Opportunities for breeding varieties suitable for propagation from true seed of particular significance to the agricultural systems of developing countries are also featured, together with an extensive bibliography. The book is based on the proceedings of a joint meeting of EAPR and EUCARPIA at King's College Cambridge December 1985. It contains contributions from many leading authorities in potato breeding and variety assessment throughout the world and will interest postgraduate students in plant breeding, genetics, and molecular biology, together with professionals engaged in potato research and the application of molecular biology to agriculture.

Breeding for Disease Resistance R. Johnson, G. J. Jellis, 2013-03-14 There is an increasing need for an understanding of the fundamental processes involved in the mechanisms by which disease resistances are introduced into crop plants. This book provides a wide-ranging coverage of the successes and failures of the classical techniques; it describes the advances towards modern technology and addresses the problems of pathogen variation. Crop plants that are considered include cereals, wheat, barley, rice, potatoes, vegetables, and soft fruits.

Advances in Research on Potato Production Shashank Shekhar Solankey, 2025-06-11 Potato (*Solanum tuberosum* L.) is the world's third most important food crop and the fourth most important food crop in India. Potatoes are nutritionally rich, fat-free, gluten-free, and high in dietary fibre. They are also a good source of vitamin C, vitamin B6, phenols, iron, potassium, phosphorus, magnesium, and protein as compared to cereals. They are more energy-packed than any other popular vegetables and have the ability to combat hidden hunger, which is a major global health issue. The potato is also considered the king of vegetables due to its versatile uses and is an important staple food worldwide. According to the FAOSTAT database, 2023 global potato production in 2022 was 375 million tonnes, with the top producers being China (95.5 million tonnes) and India (56 million tonnes). The United Nations declared 2008 the International Year of the Potato (IYP) to increase awareness of the relationship that exists between poverty, food security, malnutrition, and the potential contribution of the potato in defeating hunger. Moreover, this magical crop can generate a higher yield compared to the other crops; hence, it is one of the most notable crops to eliminate hunger and poverty. Therefore, sustainable potato production is important for food security and social welfare in future climate change scenarios. It is important to inform that potatoes have a shallow root system and are

highly sensitive to environmental conditions and climate change It is projected that potato yield may decrease up to 32 per cent by 2050 due to increasing temperatures and drought conditions Thus future potato breeding programmes should focus on enhancing abiotic and biotic stress tolerance through the utilization of the natural germplasm conserved in different gene banks along with climate friendly agronomical practices Moreover potato breeding should benefit from the effectiveness and ease of molecular techniques such as marker assisted selection genome wide association studies functional genomics and transgenics The development of new potato varieties can also be achieved via genetic engineering and genome editing Disease free potato seed production requires the integration of tissue culture methods followed by the production of mini tubers under an aeroponic system As it is a staple food for millions and demand for potatoes will increase in the future which makes this crop suitable for future research Hence the present book is formulated for professionals researchers and post graduate students who is working with advanced production breeding and post harvest technologies on potato crop specially in Indian perspective

The Production of New Potato Varieties: Technologies Advances G. J. Jellis, D. E. Richardson, 1987 *Workshop on Recent and Future Developments of the Potato in the World* J. G. Hermesen, J. C. Heslen, 1987

Farmers, Scientists, and Plant Breeding David Arthur Cleveland, Daniela Soleri, 2002-01-01 The purpose of this book is to examine the nature of and relationship between the knowledge of farmers and of scientists and how these can be best integrated in plant breeding

Biotechnology Jean A. Larson, 1988 Genetic Resources, Chromosome Engineering, and Crop Improvement Ram J. Singh, 2006-11-07 Summarizing landmark research Volume 3 of this essential series furnishes information on the availability of germplasm resources that breeders can exploit for producing high yielding vegetable crop varieties Written by leading international experts this volume offers the most comprehensive and up to date information on employing genetic resource

Plant Breeding Reviews, Volume 25 Jules Janick, 2010-04-07 Plant Breeding Reviews presents state of the art reviews on plant genetics and the breeding of all types of crops by both traditional means and molecular methods Many of the crops widely grown today stem from a very narrow genetic base Understanding and preserving crop genetic resources is vital to the security of food systems worldwide

Advances in Potato Chemistry

and Technology Jaspreet Singh, Lovedeep Kaur, 2016-01-19 *Advances in Potato Chemistry and Technology* Second Edition presents the latest knowledge on potato chemistry including the identification analysis and uses of chemical components in potatoes. Beginning with a brief description of potato components, the book then delves into their role during processing, then presenting information on strategies for quality optimization that provides students, researchers, and technologists working in the area of food science with recent information and updates on state-of-the-art technologies. The updated edition includes the latest information related to the identification analysis and use of chemical components of potatoes, carbohydrate and non-carbohydrate composition, cell wall chemistry, an analysis of glycoalkaloids, phenolics, and anthocyanins, thermal processing, and quality optimization. In addition, new and sophisticated methods of quality determination of potatoes and their products, innovative and healthy potato-based foods, the future of genetically modified potatoes, and the non-food use of potatoes and their products is discussed. Includes both the emerging non-food uses of potato and potato by-products as well as the expanding knowledge on the food-focused use of potatoes. Presents case studies on the problems, factors, proposed solutions, and pros and cons of each, allowing readers facing similar concerns and issues to effectively and efficiently identify an appropriate solution. Written by a global collection of experts in both food and non-food potato science. Genetic Improvement of Solanaceous Crops, Volume 1 M. K. Razdan, 2005-01-06. Potato is the most significant non-cereal crop. Much attention has been paid to this commercially important crop. The aim of this volume is to capture the recent advances made in improving potatoes using traditional breeding methods as well as genetic engineering technology. The book provides a critical appraisal of the state-of-the-art findings on Quick Bibliography Series, 1976. **Biotechnology** G. Thottappilly, 1992. Need for biotechnology research in Africa. Enhancing the genetic base. Cell and tissue culture. Controlled gene manipulation. Using molecular markers. Other selected applications of biotechnology. Policy issues. **The Potato Crop** P. M. Harris, 2012-12-06. Research and publications on the potato crop have burgeoned since the first edition of this book was published in 1978. However, the warm reception of the first edition suggested that it had a useful part to play in promoting the scientific basis for understanding and improving the yield and quality of the crop. Since the first edition was out of print and a second reprint would not have taken into account the contributions made by research over the intervening years, it became obvious that a complete revision was necessary. There was, in particular, a need to take account of the rapid extension of interest in the crop into climates and farming systems with which it has not been traditionally associated. Those involved with the crop will be sadly aware that a number of contributors to the first edition are no longer with us. Their contribution to our knowledge of the crop will, however, be a permanent legacy of their achievement. I would like to thank all those who have contributed to the book for their willingness to cooperate in the difficult task of bringing their particular subject up to date. This is even more noteworthy for the pressure of time appears to be almost an order of magnitude higher than it was when the first edition was tackled.
