Web Application Security Carlos Serrao, Vicente Aguilera, Fabio Cerullo, 2010-11-19. IBWAS 2009, the Iberic Conference on Web Applications Security, was the first international conference organized by both the OWASP Portuguese and Spanish chapters in order to join the international Web application security academic and industry communities to present and discuss the major aspects of Web applications security. There is currently a change in the information systems development paradigm. The emergence of Web 2.0 technologies led to the extensive deployment and use of Web-based applications and Web services as a way to develop new and flexible information systems. Such systems are easy to develop, deploy, and maintain, and they demonstrate impressive features for users, resulting in their current wide use. The social features of these technologies create the necessary massification effects that make millions of users share their own personal information and content over large web-based interactive platforms. Corporations, businesses, and governments all over the world are also developing and deploying more and more applications to interact with their businesses, customers, suppliers, and citizens to enable stronger and tighter relations with all of them. Moreover, legacy non-Web systems are being ported to this new intrinsically connected environment. IBWAS 2009 brought together application security experts, researchers, educators, and practitioners from industry, academia, and international communities such as OWASP in
