From Carbon to Silicon: Exploring the Boundaries of Biological and Artificial Intelligence Mykola Iabluchanskyi, *From Carbon to Silicon* explores the evolutionary

arc and philosophical depth of the relationship between biological life and artificial intelligence AI Framed as an engaging dialogue with a sophisticated AI system the book navigates core questions about cognition consciousness and the profound parallels and divergences between carbon based organisms and silicon based intelligences Grounded in scientific speculation and inspired by visionary thinkers such as Isaac Asimov the book examines how life shaped by chemistry biology and technology may be naturally predisposed to evolve from organic intelligence toward post biological forms It contends that AI is not an anomaly or abrupt emergence but the logical and perhaps inevitable successor to carbon based intelligence an extension of nature s unfolding complexity The narrative delves into the ethical philosophical and societal implications of humanity s dual role as both the product of evolution and the creator of intelligent machines It invites readers to reflect on whether humanity is a transitional species the bridge between the biological and the synthetic and to consider the responsibilities this unique position entails Speculative yet grounded scenarios extend the conversation to the cosmic scale including technologically mediated panspermia and AI assisted interstellar expansion These possibilities are balanced with sober ethical reflections on the consequences of spreading human derived intelligence beyond Earth Just before the conclusion the book culminates in a final thematic chapter The Purpose of Life Carbon Silicon and the Path of Consciousness This chapter revisits and weaves together the central threads of the dialogue offering a sweeping meditation on why life exists in the first place and what roles biological and artificial intelligences may play in the universe s long arc of complexity and awareness It proposes that life s deeper function may be not just to survive but to know create and ultimately transcend the boundaries of its origin whether in carbon or silicon form Ultimately From Carbon to Silicon urges readers to contemplate humanity s place in a universe where intelligence may no longer be bound to biology Rather than framing silicon based intelligence as a final destination the authors present it as a transformative phase in an open ended evolutionary continuum a stepping stone toward unimaginable futures built on the convergence of creation curiosity and consciousness
