Program Planning A Real Life Quantitative Approach:

Program Management Mitchell L. Springer, 2005-02-09 Although many might argue that program management is magic or luck and at times this might be the case Springer instead describes program management as both an art and a science The art of program management is addressed through the numerous qualitative aspects of dealing with people working in teams understanding what motivates people and gaining an understanding of how we manage The quantitative side is composed of a process with multiple activities with clear cut outcomes The integration of the multiple activities and outcomes provides a powerful framework for successfully planning a program *Program Management A Comprehensive Overview of the Discipline* doing what no other book has done integrates and depicts each of the many program activities art and science into a well defined sequence for creating a successful program plan Program management is not reserved for multi million dollar programs with strategic governmental or defense implications The process presented by the author can be applied to any project whether it be building a garage or planting a garden The examples presented provide a clear and concise picture of the complete set of activities how the responsible parties interact and which outcomes are desired for each activity

Competitive Strategies for Service Organisations Neil Botten, John McManus, 1999 After fifteen fearsome years on the page *Horrible Histories* are coming to the small screen with all the nasty bits intact Twelve classic *Horrible Histories* are being reissued with a tie in covr In *Savage Stone Age* readers discover What Stone Age people used instead of toilet paper and why a hole in the skull is good for headaches *Program Planning* Mitchell L. Springer, 1998 From his years of experience and an exhaustive study of the program planning literature Mitchell Springer has ascertained that the program planning process is made up of four key elements program organization planning schedule planning cost planning and performance planning Program organization planning is the process that establishes the planning and program organizations and the definition of the work to be performed Schedule planning provides the time frame for resource allocation and establishes a baseline for the current status and forecasts of completion dates for scheduled work Cost planning established a preliminary budget to use to track and compare against actual costs Performance planning is the identification and subsequent documentation of the technical performance requirements The key to understanding and quantifying programs is coming to the realization that program progress is both sequential at the micro level and nonlinear at the macro level The four primary phases of the management process planning execution analysis and adjustment may be performed at the same time because different activities within the program advance at varying rates However at the micro level for example a needs assessment must be completed before its subsequent end product can be produced The end products of all additional sequential steps cannot be generated if this first micro level step the needs assessment statement has not been completed However work on all macro level steps can proceed without the completion of the initial micro level step The author also provides several tools to help process evaluation including sample questionnaires a research observation form and data
