  Program Transformation and Programming Environments F.L. Bauer,Peter Pepper,H. Remus,2012-12-06 Proceedings of the NATO Advanced Research Workshop on Program Transformation and Programming Environments   Specification and Transformation of Programs Helmut A. Partsch,2012-12-06 Specification and transformation of programs is short for a methodology of software development where from a formal specification of a problem to be solved programs correctly solving that problem are constructed by stepwise application of formal semantics preserving transformation rules The approach considers programming as a formal activity Consequently it requires some mathematical maturity and above all the will to try something new A somewhat experienced programmer or a third or fourth year student in computer science should be able to master most of this material at least this is the level I have aimed at This book is primarily intended as a general introductory textbook on transformational methodology As with any methodology reading and understanding is necessary but not sufficient Therefore most of the chapters contain a set of exercises for practising as homework Solutions to these exercises exist and can in principle be obtained at nominal cost from the author upon request on appropriate letterhead In addition the book also can be seen as a comprehensive account of the particular transformational methodology developed within the Munich CIP project   Readings in Artificial Intelligence and Software Engineering Charles Rich,Richard C. Waters,2014-06-28 Readings in Artificial Intelligence and Software Engineering covers the main techniques and application of artificial intelligence and software engineering The ultimate goal of artificial intelligence applied to software engineering is automatic programming Automatic programming would allow a user to simply say what is wanted and have a program produced completely automatically This book is organized into 11 parts encompassing 34 chapters that specifically tackle the topics of deductive synthesis program transformations program verification and programming tutors The opening parts provide an introduction to the key ideas to the deductive approach namely the correspondence between theorems and specifications and between constructive proofs and programs These parts also describes automatic theorem provers whose development has be designed for the programming domain The subsequent parts present generalized program transformation systems the problems involved in using natural language input the features of very high level languages and the advantages of the programming by example system Other parts explore the intelligent assistant approach and the significance and relation of programming knowledge in other programming system The concluding parts focus on the features of the domain knowledge system and the artificial intelligence programming Software engineers and designers and computer programmers as well as researchers in the field of artificial intelligence will find this book invaluable   *Automatic Program Development* Olivier Danvy,Fritz Henglein,Harry Mairson,Alberto Pettorossi,2008-01-12 This work a tribute to renowned researcher Robert Paige is a collection of revised papers published in his honor in the Higher Order and Symbolic Computation Journal in 2003 and 2005 Among them there are two key papers a retrospective view of his research lines and a

proposal for future studies in the area of the automatic program derivation The book also includes some papers by members of the IFIP Working Group 2 1 of which Bob was an active member **Building Tightly Integrated Software Development Environments: The IPSEN Approach** Manfred Nagl,1996-11-13 This coherently written book is the final report on the IPSEN project on Integrated Software Project Support Environments devoted to the integration of tools for the development and maintenance of large software systems The theoretical and application oriented findings of this comprehensive project are presented in the following chapters Overview introduction classification and global approach The outside perspective tools environments their integration and user interface Internal conceptual modeling graph grammar specifications Realization derivation of efficient tools Current and future work open problems Conclusion summary evaluation and vision Also included is a comprehensive bibliography listing more than 1300 entries and a detailed index

Proceedings of the 1990 ACM Conference on LISP and Functional Programming Association for Computing Machinery,1990 *Algebraic System Specification and Development* Michel Bidoit,1991-06-26 Methods for the algebraic specification of abstract data types were proposed in the early 1970s in the USA and Canada and became a major research issue in Europe shortly afterwards Since then the algebraic approach has come to play a central role in research on formal specification and development as its range of applications was extended to the specification of complete software systems to the formal description of the program development process and to the uniform definition of syntax and semantics of programming languages Today this approach extends beyond just software to the development of integrated hardware and software systems These flourishing activities in the area of algebraic specifications have led to an abundance of approaches theories and concepts which have universal algebra category theory and logic as a common mathematical basis This volume is an annotated bibliography which provides an up to date overview of past and present work on algebraic specification No attempt is made to provide a coherent introduction to the topic for beginners the intention is rather to provide a guide to the current literature for researchers in algebraic specification and neighboring fields Some indications of how the different approaches are related are included together with some ideas concerning possible future directions **Logic Program Synthesis and Transformation** John P. Gallagher,1997-03-12 This book constitutes the strictly refereed post workshop proceedings of the Sixth International Workshop on Logic Program Synthesis and Transformation LOPSTR 96 held on board a ship sailing from Stockholm to Helsinki in August 1996 The 17 revised full papers were carefully selected from a total of initially 27 submissions The topics covered range over the areas of synthesis of programs from specifications verification transformation specialization and analysis of programs and the use of program schemata in program development

Division of Educational Programs, *Scientific and Technical Aerospace Reports* ,1992 4th Refinement Workshop Joseph M. Morris,Roger C. Shaw,2013-03-14 This volume contains the proceedings ofthe 4th Refinement Workshop which was organised by the British Computer Society specialist group in Formal Aspects of Computing Science and held in Wolfson College Cambridge on 9 11 January 1991 The term refinement embraces the theory and practice of using formal methods for specifying and implementing hardware and software Most of the achievements to date in the field have been in developing the theoretical framework for mathematical approaches to programming and on the practical side in formally specifying software while more recently we have seen the development of practical approaches to deriving programs from their speCifications The workshop gives a fair picture of the state of the art it presents new theories for reasoning about software and hardware and case studies in applying known theory to interesting small and medium scale problems We hope the book will be Of interest both to researchers in formal methods and to software engineers in industry who want to keep abreast of possible applications of formal methods in

industry The programme consisted both of invited talks and refereed papers The invited speakers were Ib S0rensen Jean Raymond Abrial Donald MacKenzie Ralph Back Robert Milne Mike Read Mike Gordon and Robert Worden who gave the introductory talk This is the first refinement workshop that solicited papers for refereeing and despite a rather late call for papers the response was excellent *Central European Functional Programming School* Zoltán Horváth,2008-09-29 This volume presents eight carefully revised texts from selected lectures given by leading researchers at the Second Central European Functional Programming School CEFP 2007 held in Cluj Napoca Romania in June 2007 The eight revised full papers presented were carefully selected during two rounds of reviewing and improvement for inclusion in the book The lectures cover a wide range of topics such as interactive workflows lazy functional programs lambda calculus and object oriented functional programming Logic-Based Program Synthesis and Transformation Andy King,2008-11-26 This postproceedings volume of the 17th International Symposium on Logic Based Program Synthesis and Transformation LOPSTR 2007 examines program termination program transformation constraint solving and analysis as well as software engineering *KORSO: Methods, Languages, and Tools for the Construction of Correct Software* Manfred Broy,Stefan Jähnichen,1995-11-08 This book constitutes the final report of the work carried out in the project KORSO Korrekte Software funded by the German Federal Ministry for Research and Technology KORSO is an evolutionary prototype oriented project aimed at improving the theoretical foundations of quality driven software engineering and at implementing known techniques for applications of practical relevance The 21 strictly refereed papers presented are organized in five sections on methods for correctness languages development systems and logical frameworks tools and case studies In addition the preface and introductory paper give valuable background information and a concise state of the art overview Knowledge-based Software Development for Real-time Distributed Systems Jeffrey J.-P.
