Liberatore, 2012-12-06 Matthew J Liberatore Department of Management Villanova University Villanova PA 19085 1 BACKGROUND The weakening competitive position of many segments of u s manufacturing has been analyzed debated and discussed in corporate boardrooms academic journals and the popular literature One result has been a renewed commitment toward improving productivity and quality in the workplace The drive to reduce manufacturing related costs while meeting ever changing customer needs has led many firms to consider more automated and flexible manufacturing systems The extent to which these new technologies can support business goals in productivity quality and flexibility is an especially important issue for manufacturing firms in the u s and other Western nations Problems have arisen in developing performance measures and evaluation criteria which reflect the full range of costs and benefits associated with these technologies Some would argue that managerial policies and attitudes and not the shortcomings of the equipment or manufacturing processes are the major impediments to implementation Kaplan 1984 *Advances in*

*Computers*, 1999-09-14 Since its first volume in 1960 *Advances in Computers* has presented detailed coverage of innovations in hardware and software and in computer theory design and applications It has also provided contributors with a medium in which they can examine their subjects in greater depth and breadth than that allowed by standard journal articles As a result many articles have become standard references that continue to be of significant lasting value despite the rapid growth taking place in the field

*Interoperability Principles and Standards: Applications to Collaborative and Automated Systems* François Vernadat, Arturo Molina, Hervé Panetto, Georg Weichhart, 2025-03-19 Interoperability is the ability for two or more systems to

interoperate i.e. to share and use common information and/or to use functionality of one another. The purpose of the book is to explain what one should know to be able to understand or implement systems interoperability at the technical, semantic and organization levels of an enterprise system or of a collaborative automated system. In particular, it presents the rationale, the basics, the common methods and the essential standards for the engineering of interoperable systems. The book is intended to serve as a textbook for those who need 1) to study basic principles, concepts and techniques along with applications of systems interoperability and 2) need to know applicable standards for planning engineering or implementing interoperability solutions. Applications will concern but are not limited to automated collaborative environments. The book should also serve as a reference document for students and academia at under graduate and graduate levels or in engineering schools as well as for researchers, practitioners, consultants and engineers faced with interoperability problems in service, industrial, government or administrative sectors.
