Object-Oriented Programming Via Fortran 90/95 J. E. Akin,2003-01-13 Learn how to write technical applications in a modern object oriented approach using Fortran 90 or 95 This book will teach you how to stop focusing on the traditional procedural abilities of Fortran and to employ the principles of object oriented programming to produce clear highly efficient executable codes In addition to covering the OOP methodologies the book also covers the basic foundation of the language and good programming skills The author highlights common themes by using comparisons with Matlab and C and uses numerous cross referenced examples to convey all concepts quickly and clearly Complete code for the examples is included on the book s web site **Microsoft RPC Programming Guide** John Shirley,Ward Rosenberry,1995 The most common use for client server technology is to combine the graphical display capabilities of a desktop PC with the database and number crunching power of a large central system But peer to peer programs can run equally well **Introduction to Programming with Fortran** Ian Chivers,Jane Sleightholme,2012-02-08 This edition has been revised to stress the use of modern Fortran throughout Key features lots of clear simple and complete examples highlighting the core language features of modern Fortran including data typing array processing control structures functions subroutines user defined types and pointers pinpoints common problems that occur when programming has sample output from a variety of compilers expands on the first edition by introducing modules as soon as the fundamental language features have been covered Modules are the major organisational feature of Fortran and are the equivalent of classes in other languages major new features covered in this edition include introduction to object oriented programming in Fortran introduction to parallel programming in Fortran using MPI OpenMP and Coarray Fortra this edition has three target audiences the complete beginner existing Fortran programmers wishing to update their code those with programming experience in other languages Ian Chivers and Jane Sleightholme are the joint owners of comp fortran 90 which is a lively forum for the exchange of technical details of the Fortran language Ian is the editor of the ACM Fortran Forum and both Jane and Ian have both been involved in the Fortran standardisation process The authors have been teaching and supporting Fortran and related areas for over 30 years and their latest book reflects the lessons that have been learnt from this Monthly Catalog of United States Government Publications ,2003 *An Introduction to High-performance Scientific Computing* ,1996 Designed for undergraduates An Introduction to High Performance Scientific Computing assumes a basic knowledge of numerical computation and proficiency in Fortran or C programming and can be used in any science computer science applied mathematics or engineering department or by practicing scientists and engineers especially those associated with one of the national laboratories or supercomputer centers This text evolved from a new curriculum in scientific computing that was developed to teach undergraduate science and engineering majors how to use high performance computing systems supercomputers in scientific and engineering applications Designed for undergraduates An Introduction to High Performance Scientific

Computing assumes a basic knowledge of numerical computation and proficiency in Fortran or C programming and can be used in any science computer science applied mathematics or engineering department or by practicing scientists and engineers especially those associated with one of the national laboratories or supercomputer centers The authors begin with a survey of scientific computing and then provide a review of background numerical analysis IEEE arithmetic Unix Fortran and tools elements of MATLAB IDL AVS Next full coverage is given to scientific visualization and to the architectures scientific workstations and vector and parallel supercomputers and performance evaluation needed to solve large scale problems The concluding section on applications includes three problems molecular dynamics advection and computerized tomography that illustrate the challenge of solving problems on a variety of computer architectures as well as the suitability of a particular architecture to solving a particular problem Finally since this can only be a hands on course with extensive programming and experimentation with a variety of architectures and programming paradigms the authors have provided a laboratory manual and supporting software via anonymous ftp Scientific and Engineering Computation series
