Programmers And Managers The Routinization Of Computer Programming In The United States:

Programmers and Managers Philip Kraft,1977 Programmers and Managers P. Kraft,1977-07-18 *Programmers and Managers : the Routinization of Computer Programming Inthe United States* P. Kraft,1977 **Uncovering Labour in Information Revolutions, 1750-2000: Volume 11** Aad Blok,Greg Downey,2003-12-15 Discussion of the current Information Revolution tends to focus on technological developments in information and communication and overlooks both the human labour involved in the development maintenance and daily use of information and communication technologies ICTs and the consequences of the implementation of these ICTs for the position and divisions of labour This volume aims to redress this imbalance by exploring the role position and divisions of information and communication labour in the broadest sense through periods of revolutionary technological change *Programmers and Managers* P. Kraft,2012-12-06 Norbert Wiener perhaps better than anyone else understood the intimate and delicate relationship between control and communication that messages intended as commands do not necessarily differ from those intended simply as facts Wiener noted the paradox when the modem computer was hardly more than a laboratory curiosity Thirty years later the same paradox is at the heart of a severe identity crisis which con fronts computer programmers Are they primarily members of management acting as foremen whose task it is to ensure that orders emanating from executive suites are faithfully translated into comprehensible messages Or are they perhaps simply engineers preoccupied with the technical difficulties of relating software to hardware and vice versa Are they aware furthermore of the degree to which their work whether as manager or engineer routinizes the work of others and thereby helps shape the structure of social class relation ships I doubt that many of us who lived through the first heady and frantic years of software development at places like the RAND and System Development Corporations ever took time to think about such questions The science fiction like setting of mysterious machines blinking lights and torrents of numbers served to awe outsiders who could only marvel at the complexity of it all We were insiders who constituted a secret society into which only initiates were welcome So today I marvel at the boundless audacity of a rank out sider in writing a book like *Programmers and Managers* The Computer Boys Take Over Nathan L. Ensmenger,2012-08-24 The contentious history of the computer programmers who developed the software that made the computer revolution possible This is a book about the computer revolution of the mid twentieth century and the people who made it possible Unlike most histories of computing it is not a book about machines inventors or entrepreneurs Instead it tells the story of the vast but largely anonymous legions of computer specialists programmers systems analysts and other software developers who transformed the electronic computer from a scientific curiosity into the defining technology of the modern era As the systems that they built became increasingly powerful and ubiquitous these specialists became the focus of a series of critiques of the social and organizational impact of electronic computing To many of their contemporaries it seemed the computer boys were taking over not just in the corporate setting but also in government politics and society in

general In *The Computer Boys Take Over* Nathan Ensmenger traces the rise to power of the computer expert in modern American society His rich and nuanced portrayal of the men and women a surprising number of the computer boys were in fact female who built their careers around the novel technology of electronic computing explores issues of power identity and expertise that have only become more significant in our increasingly computerized society In his recasting of the drama of the computer revolution through the eyes of its principle revolutionaries Ensmenger reminds us that the computerization of modern society was not an inevitable process driven by impersonal technological or economic imperatives but was rather a creative contentious and above all fundamentally human development

Hashagen, Reinhard Keil-Slawik, Arthur L. Norberg, 2013-06-29

Feminism Confronts Technology Judy

Wajcman, 2013-05-29 *Feminism Confronts Technology* provides a lively and engaging exploration of the impact of technology on women's lives from word processors to food processors and genetic engineering to the design of cities Comprehensive and critical this book surveys the sociological and feminist literature on technology highlighting the male bias in the way technology is defined as well as developed Wajcman sets the scene with an overview of feminist theories of science and technology encompassing the technologies of production and reproduction as well as domestic technology The author challenges the common assumption that technology is gender neutral looking at whether technology can liberate women or whether the new technologies are reinforcing sexual divisions in society

Second Bibliographic Guide to the History of Computing, Computers, and the Information Processing Industry James W. Cortada, 1996-01-30 Complementing the author's 1990 bibliography *A Bibliographic Guide to the History of Computing Computers and the Information Processing Industry* this bibliography provides 2 500 new citations covering all significant literature published since the late 1980s It includes all aspects of the subject biographies company histories industry studies product descriptions sociological studies industry directories and traditional monographic histories and covers all periods from the beginnings to the personal computer New to this volume is a chapter on the management of information processing operations useful to both historians and managers of information technology Together with the earlier bibliography this work provides the most comprehensive bibliographic guide to the history of computers computing and the information processing industry The organization of the book follows that of the earlier work with the addition of the new chapter on the management of information processing All entries are new to this volume Titles are annotated and each chapter begins with a short introduction A full table of contents and author and subject indexes enhance accessibility to the material

Social Thinking--software Practice Yvonne

Dittrich, Christiane Floyd, Ralf Klischewski, 2002 A collection of essays on the interrelationship of social science and software practice Software practice which includes software development design and use needs to go beyond the traditional engineering framework Drawing on a variety of social theory approaches this book focuses on interdisciplinary cooperation in software practice The topics discussed include the facilitation of collaborative software development communication

between developers and users and the embedding of software systems in organizations *Systems Development Methods for the Next Century* W. Gregory Wojtkowski, Wita Wojtkowski, Stanislaw Wrycza, Armi Krajowej, Joze Zupancic, 2012-12-06 This book is a result of the ISD 97 Sixth International Conference on Information Systems Development Methods and Tools Theory and Practice held August 11-14 1997 in Boise Idaho USA The purpose of this Conference was to address the issues facing academia and industry when specifying developing managing and improving software systems The selection of papers was carried out by the International Program Committee All papers were reviewed in advance by at least three people Papers were judged according to their originality relevance and presentation quality All papers were judged purely on their own merits independently of other submissions This year's Information Systems Development Conference ISD 97 is the first ISD conference being held in the US ISD was brought into existence almost ten years ago It continues the fine tradition of the first Polish Scandinavian Seminar on Current Trends in Information Systems Development Methodologies held in Gdansk Poland in 1988 ISD 98 will be held in Bled Slovenia ISD 97 consists not only of the technical program represented in these proceedings but also tutorials on improved software testing and end user information systems and workshop on sharing knowledge within international high technology industries that are intended for both the research and business communities We would like to thank the authors of papers accepted for ISD 97 who all made gallant efforts to provide me with electronic copies of their manuscripts conforming to common guidelines We thank them for thoughtfully responding to reviewers comments and carefully preparing their final contributions *Automation and Autonomy* James Steinhoff, 2021-06-21 This book argues that Marxist theory is essential for understanding the contemporary industrialization of the form of artificial intelligence AI called machine learning It includes a political economic history of AI tracking how it went from a fringe research interest for a handful of scientists in the 1950s to a centerpiece of cybernetic capital fifty years later It also includes a political economic study of the scale scope and dynamics of the contemporary AI industry as well as a labour process analysis of commercial machine learning software production based on interviews with workers and management in AI companies around the world ranging from tiny startups to giant technology firms On the basis of this study Steinhoff develops a Marxist analysis to argue that the popular theory of immaterial labour which holds that information technologies increase the autonomy of workers from capital tending towards a post capitalist economy does not adequately describe the situation of high tech digital labour today In the AI industry digital labour remains firmly under the control of capital Steinhoff argues that theories discerning therein an emergent autonomy of labour are in fact witnessing labour's increasing automation Labor in Cross-Cultural Perspective Society for Economic Anthropology (U.S.). Meeting, 2006 This excellent new volume in the series from the Society for Economic Anthropology focuses on the role of labor in world economies Contributors offer a range of case studies illustrating labor processes in both western and nonwestern societies Individual sections include discussions on household labor firms and corporations and state and transnational conditions This book

will be a valuable resource for scholars students and interested readers of international economics anthropology development issues labor studies and sociology Labour Process Theory David Knights,Hugh Willmott,2016-07-27 How are we to make sense of the way work is organised and controlled To what extent is its design the result of technological demands the interests of capital or processes of negotiation and struggle In recent years labour process analysis revived by Braverman s Labor and Monopoly Capital has been most influential in shaping our thinking about this question With contributions from leading authorities in the field this book reviews the contribution of the labour process theory to the study of work organisation Providing a fresh response to criticisms of Bravermania and lost momentum the volume explores the theoretical foundations of labour process analysis and suggests new directions for its development **Computer Applications in the Social Sciences** Edward E. Brent,Ronald E. Anderson,1990 Presenting an introduction to computing and advice on computer applications this book examines hardware and software with respect to the needs of the social scientist It offers a framework for the use of computers with focus on the work station the center of which is a personal computer connected to networks by a telephone based modem **The Computerised Lawyer** Philip Leith,2012-12-06 The aim of the Applications of Advanced Computing Techniques Series is to publish accounts of particular computer application areas which provide good examples of advanced practice in the fields concerned In some volumes the techniques described will be advanced because of the particular computer technologies used In other volumes the techniques will be advanced because they illustrate new ways of using computing in particular fields or because they raise new social and ethical issues All the volumes are designed to be readable both for practitioners working in the application area concerned in this case lawyers and for computer professionals interested in leading edge applications Philip Leith meets all these objectives in this volume The first four chapters provide a valuable introduction to computer concepts and methods of holding information from the specific point of view of the practising lawyer or student Whilst some of these issues may be familiar to computer practitioners it is only through a proper appreciation of the technology that the real benefits to the working lawyer become clear **The Laws of the Knowledge Workplace** Dariusz Jemielniak,2016-03-03 In The Laws of the Knowledge Workplace Dr Jemielniak has collected research based chapters providing deep interdisciplinary insight into knowledge professions addressing issues of professional identity emotion power and authority trust and indoctrination and management behaviour This leads to an examination of issues related to time and work scheduling and its bearing on play family symbolic sacrifices and employee burn out In particular it delves into the identity shifts between knowledge workers and managers nepotism and turnover intentions among knowledge workers the implementation of engineering projects coordination problems in offshore production systems leadership in virtual teams decision support systems taking into account the moral aspects of consequences netnography as a tool for studying knowledge work and innovative networks in the aviation industry The accounts and studies in this book come from management organization studies sociology and anthropology of work

perspectives and are fully international in scope They highlight the scale of the serious changes in occupational roles and to the meaning of work that is taking place in knowledge intensive environments and give a pointer to what might constitute good and bad management practice in knowledge intensive companies

Management Practices in High-Tech Environments Jemielniak, Dariusz, Kociatkiewicz, Jerzy, 2008-04-30 This book leads to emergence of new insufficiently analyzed and described organizational phenomena Thoroughly studying this from international comparative cross cultural perspective Management Practices in High Tech Environments presents cutting edge research on management practices in American European Asian and Middle Eastern high tech companies with particular focus on fieldwork driven but reflective contributions Provided by publisher

Power in the Workplace Steven Peter Vallas, 1993-01-07 This book presents a systematic case study of the hi tech communications industry that reveals many trends in managerial authority in the workplace Vallas reveals the mechanisms that enable advanced capitalist firms to achieve and maintain control over the workers they employ He demonstrates that the spread and integration of automated technologies place lower level human labor in positions of declining power The new regime does not deskill workers and need not lead toward what some have called electronic sweatshops Nevertheless Vallas concludes that increasing managerial control over production poses a major challenge to those who advocate labor participation in the management of American industries

Beyond Spinoff John A. Alic, 1992 In a rapidly changing world there needs to be a critical reappraisal of traditional military industry relationships This book packed with data industry specific case studies and sophisticated analysis is such an appraisal It will be required reading for technology managers and policymakers in industry and government as well as those concerned with technological and economic competitiveness
