by Raeto Collin West

The book described by Jim Butterfield as

"...unquestionably the most comprehensive and accurate reference I have seen to date..."

Here's just a sample of reviewer and reader reaction:

From reviewers:

Educational Computing Reviewer by Stephen Fuchs

"Of all the books I have read on the PET, this book (Programming the PET/CBM) by Raeto West must rank as one of the most comprehensive and readable accounts on the PET that I have ever read. The pleasure is all mine."

"If you wish to get more from your PET than arcade games and simple teaching programs, then this book is a must for your bookshelf. It does not matter whether you run on BASIC 1, BASIC 2, or BASIC 4 since all readers are supplied with addresses and changes to make them run on any machine without question."

"This book, with its brief explanations of the PET, its useful routines and programming hints, is an essential purchase."

EPIC Magazine Review - British PET User Group by Ron Oliver

"This publication represents over a year's intensive research...and the resulting product is a valuable work of reference. An indispensable amount of useful information has been packed in this 500+ page work at which I need to commend that I did not know how to

start this review at all."

"This book is a must for every COMPET user."

From readers:

"...a book the damage to advanced user cannot afford not to possess."

"My copy of your Programming the PET/CBM has been my daily companion for nearly a month and I am finding it really addictive suffering intense withdrawal symptoms whenever I try to do anything to do with my computer without consulting it. It is without doubt the best book on the subject available today."

"I have recently acquired a copy of your book Programming the PET/CBM and must congratulate you on its concept and packaging in so much detail. It's so very much better than anything I have managed to find that it's for my constant reference manual."

Malcolm-Lawes,2012-12-06 The invention of the microcomputer in the mid 1970s and its subsequent low cost proliferation has opened up a new world for the laboratory scientist Tedious data collection can now be automated relatively cheaply and with an enormous increase in reliability New techniques of measurement are accessible with the intelligent instrumentation made possible by these programmable devices and the ease of use of even standard measurement techniques may be improved by the data processing capabilities of the humblest micro The latest items of commercial laboratory instrumentation are invariably computer controlled although this is more likely to mean that a microprocessor is involved than that a versatile microcomputer is provided along with the instrument It is clear that all scientists of the future will need some knowledge of computers if only to aid them in mastering the button pushing associated with gleaming new instruments However to be able to exploit this newly accessible computing power to the full the practising laboratory scientist must gain sufficient understanding to utilise the communication channels between apparatus on the laboratory bench and program within the computer This book attempts to provide an introduction to those communication channels in a manner which is understandable for scientists who do not specialise in electronics or computers **Programmer's Reference Guide to the TI-99/4A** C.
