Progress in Elliptic and Parabolic Partial Differential Equations A Alvino, P Buonocore, V Ferone, E Giarrusso, G Trombetti, S Matarasso, 1996-05-15 This Research Note collects reports of the invited plenary addresses given during the conference Elliptic and Parabolic Partial Differential Equations and Applications held in Capri Italy 19-23 September 1994. The conference was devoted to new developments in partial differential equations of elliptic and parabolic type and to their applications in various fields. **Progress in Partial Differential Equations: Elliptic and Parabolic Problems**, 1992

Progress in Partial Differential Equations Herbert Amann, C Bandle, Michel Chipot, F Conrad, I Shafrir, 1998-04-01 The numerous applications of partial differential equations to problems in physics, mechanics and engineering keep the subject an extremely active and vital area of research. With the number of researchers working in the field advancing large and small come frequently. Therefore it is essential that mathematicians working in partial differential equations and applied mathematics keep abreast of new developments. Progress in Partial Differential Equations presents some of the latest research in this important field. Both volumes contain the lectures and papers of top international researchers contributed at the Third European Conference on Elliptic and Parabolic Problems. In addition to the general theory of elliptic and parabolic problems, the topics covered at the conference include applications, free boundary problems, fluid mechanics, general evolution problems, calculus of variations, homogenization, modeling, numerical analysis. The research notes in these volumes offer a valuable update on the state of the art in this important field of mathematics. Recent Advances in Differential Equations H-H Dai, P.L. Sachdev, 2020-01-30 The First Pan China Conference on Differential Equations was held in Kunming, China, in June of 1997. Researchers from around the world attended, including representatives from the US, Canada, and the Netherlands, but the majority of the speakers hailed from China and Hong Kong. This volume contains the plenary lectures and invited talks presented at that conference and provides an excellent view of the research on differential equations being carried out in China. Most of the subjects addressed arose from actual applications and cover ordinary and partial differential equations. Topics include **Ordinary and Partial Differential Equations** P Smith, R J

Jarvis, 1997-07-16 These conference proceedings include papers by a number of experts with a common interest in differential equations and their application in physical and biological systems. Topics covered include direct and inverse electromagnetic scattering techniques, spatial epidemic models, wound healing, chemotaxis and reaction-diffusion equations, dynamics and stability of thin liquid films, and a contemporary formulation of symmetric linear differential equations.

Progress in Holomorphic Dynamics Hartje Kriete, 1998-05-20 In the last few decades, complex dynamical systems have received widespread public attention and emerged as one of the most active fields of mathematical research. Classical and Quantic Periodic Motions of Multiply Polarized Spin-Particles Abbas Bahri, 1997-11-28 The author of this volume defines a diffusion flow for a variational problem lacking completeness related to the geometry of a contact form α and a vector field u in its kernel. He analyzes the ends of the flow lines and finds them to be of two types: one involving periodic orbits of the Reeb Hamiltonian vector field x and the other where asymptotes occur. In the most general case these turn out to be periodic motions for x up to quantic jumps of a very special type along u . He shows that the mathematical results and the physical interpretation fit and provide new points of view useful in the foundations of quantum mechanics.

Boundary Value Problems with Equivalued Surface and Resistivity Well-Logging T Li, Songmu Zheng, Yong-Si Tan, Weixi Shen, 1998-03-25 This first part of this book deals with the boundary value problem with equivalued surfaces while the second part is concerned with the mathematical model and method including the numerical method of the resistivity well logging for the three lateral well logging.

The book surveys recent developments in Navier Stokes equations and their applications and contains contributions from leading experts in the field. It will be a valuable resource for all researchers in fluid dynamics.

Topics in Pseudo-Differential Operators S D Zaidman, 1996-10-29 This Research Note presents in a clear and detailed manner a certain group of results pertaining to some variants, extensions and generalizations on the theory of pseudo differential operators as introduced in the pioneering work of Kohn-Nirenberg. The author presents a discussion of concepts of order, true order and asymptotic expansions for general linear operators in some vector spaces following a pattern appearing in pseudo differential operator theory. The book is intended mainly for an audience of operator theorists at a fairly elementary level; its main objective is a unitary presentation of articles written by the author over a number of years.
