The Role of Renewable Energy Technology in Holistic Community Development Alexander Zahnd, 2014-01-25 This thesis documents almost twenty years of the author's work on the development and implementation of a new approach to holistic community development in remote and disadvantaged villages in Nepal. It describes the theoretical basis of the work, the main research activities and the practical outcomes of the implemented programs. One of the fundamental cornerstones of holistic community development is the provision of appropriate and sustainable solutions for the long term development of local communities. This requires that people's own identified needs be recognized and addressed in partnership with them in holistic ways. The author explains the many synergies that result from this holistic approach to community development. Another cornerstone of his approach is to utilise the communities' locally available renewable resources for long term sustainable development. One of the key findings of the thesis is that improved access to energy services such as cooking with a smokeless metal stove in a clean indoor environment, basic indoor lighting and increased food production and safe food storage through a greenhouse and a solar drier respectively, need to be at the very heart of any long term holistic community development project. The thesis demonstrates that tapping into locally available renewable energy resources and converting them through contextualized and locally manufactured renewable energy technologies has a central role in long term holistic community development programs. Such programs are successful because they provide both appropriate technologies and life changing experiences for the local users involved.

Bioprocessing for Value-Added Products from Renewable Resources Shang-Tian Yang, 2011-08-11 Bioprocessing for Value Added Products from Renewable Resources provides a timely review of new and unconventional techniques for manufacturing high value products based on simple biological material. The book discusses the principles underpinning modern industrial biotechnology and describes a unique collection of novel bioprocesses for a sustainable future. This book begins in a very structured way. It first looks at the modern technologies that form the basis for creating a bio based industry, before describing the various organisms that are suitable for bioprocessing, from bacteria to algae, as well as their unique characteristics. This is followed by a discussion of novel experimental bioprocesses such as the production of medicinal chemicals, the production of chiral compounds and the design of biofuel cells. The book concludes with examples where biological renewable resources become an important feedstock for large scale industrial production. This book is suitable for researchers, practitioners, students and consultants in the bioprocess and biotechnology fields and for others who are interested in biotechnology, engineering, industrial microbiology and chemical engineering. Reviews the principles underpinning modern industrial biotechnology. Provides a unique collection of novel bioprocesses for a sustainable future. Gives examples of economical use of renewable resources as feedstocks. Suitable for both non experts and experts in the bioproduct industry.

Tensile Fracturing in Rocks Dov Bahat, Avinoam Rabinovitch, Vladimir Frid, 2005-08-31 Tensile Fracturing in Rocks presents field observations on fracturing of sedimentary rocks and granite outcrops from various provinces in three continents. It also combines results of recent experiments conducted at different laboratories around the world with current theories on fracturing. In treating faults, this book limits itself to faults that are associated with joint sets produced by definable causes and occasionally to cases where interaction between the two types of fracture faults and joints is not clear. The book's subject matter is divided over six chapters which are briefly described below. Chapter 1 summarizes current key concepts in fracture physics. It starts with a presentation of the elastic theory of fracture and concentrates on the results of linear elastic fracture mechanics. The chapter touches also upon other fracture properties e.g. crack nucleation, dynamic fracturing and slow fracturing processes. Nucleation is dressed by statistical mechanics methods incorporating modern approaches of thermal and fiber bundle processes. The analyses of dynamic fracturing and slow fracturing focus on the differences as compared to the linear elastic approach. The controversy in interpreting experimental dynamic results is highlighted as are the surface morphology patterns that emerge in fracturing and the non-Griffith crack extension criterion in very slow fracturing processes.

Environmental Biotechnology Rouf Ahmad Bhat, Moonisa Aslam Dervash, Khalid Rehman Hakeem, Khalid Zaffar Masoodi, 2022-06-30 This book provides a review of innovative and novel biotechnological techniques that can be implemented to assess, analyze and mitigate harmful pollutants and wastes that result from agricultural and industrial operations. It helps to meet the much needed demand for improvement of low cost technologies that tackle pollution problems scientifically for the safeguard of the environment, focusing on bioremediation solutions that also create useful and renewable forms of energy. The biotechnological interventions discussed in the volume include approaches involving genomics, proteomics, transcriptomics, metabolomics and fluxomics. In addition, biological agents such as microalgae, bacteria, fungi and bacteriophage which can also prove to be helpful in the elimination of wastes are explored. Topics in Environmental Biotechnology: Sustainable Remediation of Contamination in Different Environments include the associated consequences and hazards from agricultural and industrial waste and a variety of bioremediation measures including the use of bioaugmentation, biosensors, challenges of biofuel production and more. The book is directed to researchers, scientists, industrialists, farmers, agricultural waste management authorities as well as to faculty and students and aims to help implement these novel technologies for environmental stability.

Negreiros, Wegner, Rubia, 2018-06-15 O desenvolvimento tecnológico e a inovação os fatores decisivos para que os países avancem para a categoria de alta renda per capita Não se trata de uma panaceia mas a história nos ensina que na es que se desenvolveram

industrialmente por meio da acumulação de capacidades tecnológicas para inovação também obtiveram significativo desenvolvimento socioeconômico. Tornaram-se países de alta renda, transformaram-se em líderes no mercado global e em fornecedores de tecnologia para vários tipos de indústria. Por isso, o processo de acumulação de capacidades para inovação em nível da indústria amplamente definida e suas empresas um dos principais insumos para que o Brasil obtenha desenvolvimento tecnológico relevante e possa escapar da condição de país de renda média na qual se encontra aprisionado há mais de 50 anos.
