Norman J. Rosenberg, Roberto C. Izaurralde, 2013-03-09 Soil carbon sequestration can play a strategic role in controlling the increase of CO<sub>2</sub> in the atmosphere and thereby help mitigate climatic change There are scientific opportunities to increase

the capacity of soils to store carbon and remove it from circulation for longer periods of time The vast areas of degraded and desertified lands throughout the world offer great potential for the sequestration of very large quantities of carbon If credits are to be bought and sold for carbon storage quick and inexpensive instruments and methods will be needed to monitor and verify that carbon is actually being added and maintained in soils Large scale soil carbon sequestration projects pose economic and social problems that need to be explored This book focuses on scientific and implementation issues that need to be addressed in order to advance the discipline of carbon sequestration from theory to reality The main issues discussed in the book are broad and cover aspects of basic science monitoring and implementation The opportunity to restore productivity of degraded lands through carbon sequestration is examined in detail This book will be of special interest to professionals in agronomy soil science and climatology

**Banded Vegetation Patterning in Arid and Semiarid Environments** David J. Tongway, Christian Valentin, Josiane Seghieri, 2012-12-06 Aerial photography has revealed the striking widespread phenomenon of repeating patterns of vegetation in more arid areas of the world Two interdependent phases bands of dense and sparse vegetation alternate in the landscape This volume synthesizes half a century's accumulated knowledge of both theoretical and applied landscape functions from a variety of these regions It covers structure dynamics and methods of study as well as disturbances to these landscapes and relevant management issues Chapters are included to discuss the role of modeling in answering questions about the origins and complex processes of banded landscapes Studies of banded landscapes have yielded valuable lessons for understanding other semi arid landscapes as well leading to a knowledge base facilitating sustainable use and rehabilitation

**Fifty Years of Invasion Ecology** David M. Richardson, 2011-01-18 Invasion ecology is the study of the causes and consequences of the introduction of organisms to areas outside their native range Interest in this field has exploded in the past few decades Explaining why and how organisms are moved around the world how and why some become established and invade and how best to manage invasive species in the face of global change are all crucial issues that interest biogeographers ecologists and environmental managers in all parts of the world This book brings together the insights of more than 50 authors to examine the origins foundations current dimensions and potential trajectories of invasion ecology It revisits key tenets of the foundations of invasion ecology including contributions of pioneering naturalists of the 19th century including Charles Darwin and British ecologist Charles Elton whose 1958

monograph on invasive species is widely acknowledged as having focussed scientific attention on biological invasions

Smith, Russell Monson, Jay E. Anderson, 2012-12-06 This book begins with the physical and biological characterization of the four North American deserts and a description of the primary adaptations of plants to environmental stress In the following chapters the authors present case studies of key species representing dominant growth forms of the North American deserts and provide an up to date and comprehensive review of the major patterns of adaptations in desert plants One chapter is devoted to several important exotic plants that have invaded North American deserts The book ends with a synthesis of the adaptations and resource requirements of North American desert plants Further it addresses how desert plants may respond to global climate change **Ecoagriculture for a Sustainable Food Future** Nicole Y. Chalmer, 2021-05-03 Global food security is dependent on ecologically viable production systems but current agricultural practices are often at odds with environmental sustainability Resolving this disparity is a huge task but there is much that can be learned from traditional food production systems that persisted for thousands of years Ecoagriculture for a Sustainable Food Future describes the ecological history of food production systems in Australia showing how Aboriginal food systems collapsed when European farming methods were imposed on bushlands

The industrialised agricultural systems that are now prevalent across the world require constant input of finite resources and continue to cause destructive environmental change This book explores the damage that has arisen from farming systems unsuited to their environment and presents compelling evidence that producing food is an ecological process that needs to be rethought in order to ensure resilient food production into the future Cultural sensitivity Readers are warned that there may be words descriptions and terms used in this book that are culturally sensitive and which might not normally be used in certain public or community contexts While this information may not reflect current understanding it is provided by the author in a historical context

**Ecophysiology of Small Desert Mammals** Allan A. Degen, 2012-12-06 Since small mammals have a large surface to mass ratio one would expect them to quickly dehydrate and perish at high environmental temperatures Nonetheless a large number of small mammal species inhabit deserts This fascinating phenomenon is investigated by Prof A Allan Degen in his book The majority of small desert mammals are rodents but shrews of several grams and small foxes of 1 kg are also present Their survival is due mainly to behavioural adaptations and habitat selection however physiological adaptations also contribute to the success Interestingly many small mammals that live in different deserts of the world show similarities in their adaptive traits although they have different taxonomic affinities
