Séminaire de Théorie des Nombres, Paris 1985-86 C. Goldstein, 2013-12-01 This is the sixth annual volume of papers based on the outstanding lectures given at the S minaire de Th orie des Nombres de Paris The results presented in 1985 86 by an international group of mathematicians reflect the most recent work in many areas of number theory Séminaire de théorie des nombres, Paris 1984-85, 1986 Seminaire De Theorie Des Nombres, Paris 1988-1989 (progress In Mathematics, Vol 91) Catherine Goldstein, 1990 Very Good No Highlights or Markup all pages are intact Some Problems of Unlikely Intersections in Arithmetic and Geometry Umberto Zannier, 2012-03-25 This book considers the so called Unlikely Intersections a topic that embraces well known issues such as Lang's and Manin Mumford's concerning torsion points in subvarieties of tori or abelian varieties More generally the book considers algebraic subgroups that meet a given subvariety in a set of unlikely dimension The book is an expansion of the Hermann Weyl Lectures delivered by Umberto Zannier at the Institute for Advanced Study in Princeton in May 2010 The book consists of four chapters and seven brief appendixes the last six by David Masser The first chapter considers multiplicative algebraic groups presenting proofs of several developments ranging from the origins to recent results and discussing many applications and relations with other contexts The second chapter considers an analogue in arithmetic and several applications of this The third chapter introduces a new method for approaching some of these questions and presents a detailed application of this by Masser and the author to a relative case of the Manin Mumford issue The fourth chapter focuses on the Andr Oort conjecture outlining work by Pila European Congress of Mathematics Paris, July 6-10, 1992 Anthony Joseph, Fulbert Mignot, Francois Murat, Bernard Prum, Rudolf Rentschler, 1994-07 Table of Contents D Duffie Martingales Arbitrage and Portfolio Choice J Fr hlich Mathematical Aspects of the Quantum Hall Effect M Giaquinta Analytic and Geometric Aspects of Variational Problems for Vector Valued Mappings U Hamenst dt Harmonic Measures for Leafwise Elliptic Operators Along Foliations M Kontsevich Feynman Diagrams and Low Dimensional Topology S B Kuksin KAM Theory for Partial Differential Equations M Laczkovich Paradoxical Decompositions A Survey of Recent Results J F Le Gall A Path Valued Markov Process and its Connections with Partial Differential Equations I Madsen The Cyclotomic Trace in Algebraic K Theory A S Merkurjev Algebraic K Theory and Galois Cohomology J Nekov r Values of L Functions and p Adic Cohomology Y A Neretin Mantles Trains and Representations of Infinite Dimensional Groups M A Nowak The Evolutionary Dynamics of HIV Infections R Piene On the Enumeration of Algebraic Curves from Circles to Instantons A Quarteroni Mathematical Aspects of Domain Decomposition Methods A Schrijver Paths in Graphs and Curves on Surfaces B Silverman Function Estimation and Functional Data Analysis V Strassen Algebra and Complexity P Tukia Generalizations of Fuchsian and Kleinian Groups C Viterbo Properties of Embedded Lagrange Manifolds D Voiculescu Alternative Entropies in Operator Algebras M Wodzicki Algebraic K Theory and Functional Analysis D Zagier Values of Zeta Functions and Their Applications *New Advances in Transcendence Theory* Alan

Baker, London Mathematical Society, 1988-10-13 This is an account of the proceedings of a very successful symposium of Transcendental Number Theory held in Durham in 1986 Most of the leading international specialists were present and the lectures reflected the great advances that have taken place in this area. The papers cover all the main branches of the subject and include not only definitive research but valuable survey articles Séminaire de Théorie Des Nombres Sinnou David, 1993 Based on the lectures given at the Seminaire de Theorie des Nombres de Paris in 1990 1991 this collection of papers reflects work in many areas of number theory including cubic exponential sums Riemann's period relations and Galois representations attached to points on Shimura varieties Diophantine Approximation and Transcendence Theory Gisbert Wüstholz,2006-11-15 Number Theory in Progress Kálmán Györy, Henryk Iwaniec, Jerzy Urbanowicz, 2012-02-13 Proceedings of the International Conference on Number Theory organized by the Stefan Banach International Mathematical Center in Honor of the 60th Birthday of Andrzej Schinzel Zakopane Poland June 30 July 9 1997 Lectures on the Geometry of Poisson Manifolds Izu Vaisman, 1994-03-01 Everybody having even the slightest interest in analytical mechanics remembers having met there the Poisson bracket of two functions of 2n variables pi qi f g 8f8g 8 8 0 1 f g L ji ji 1 p q q p and the fundamental role it plays in that field In modern works this bracket is derived from a symplectic structure and it appears as one of the main in gredients of symplectic manifolds In fact it can even be taken as the defining clement of the structure e g TIl But the study of some mechanical sys tems particularly systems with symmetry groups or constraints may lead to more general Poisson brackets Therefore it was natural to define a mathematical structure where the notion of a Poisson bracket would be the primary notion of the theory and from this viewpoint such a theory has been developed since the early 19708 by A Lichnerowicz A Weinstein and many other authors see the references at the end of the book But it has been remarked by Weinstein We3 that in fact the theory can be traced back to S Lie himself Lie **Introduction to Modern Number Theory** Yu. I. Manin, Alexei A. Panchishkin, 2006-03-30 This edition has been called startlingly up to date and in this corrected second printing you can be sure that it s even more contemporaneous It surveys from a unified point of view both the modern state and the trends of continuing development in various branches of number theory Illuminated by elementary problems the central ideas of modern theories are laid bare Some topics covered include non Abelian generalizations of class field theory recursive computability and Diophantine equations zeta and L functions This substantially revised and expanded new edition contains several new sections such as Wiles proof of Fermat's Last Theorem and relevant techniques coming from a synthesis of various theories <u>Iwasawa Theory 2012</u> Thanasis Bouganis,Otmar Venjakob,2014-12-08 This is the fifth conference in a bi annual series following conferences in Besancon Limoges Irsee and Toronto The meeting aims to bring together different strands of research in and closely related to the area of Iwasawa theory During the week before the conference in a kind of summer school a series of preparatory lectures for young mathematicians was provided as an introduction to Iwasawa theory Iwasawa theory is a modern and powerful branch of number theory and can be traced back to the Japanese mathematician

Kenkichi Iwasawa who introduced the systematic study of Z_p extensions and p adic L functions concentrating on the case of ideal class groups Later this would be generalized to elliptic curves Over the last few decades considerable progress has been made in automorphic Iwasawa theory e g the proof of the Main Conjecture for GL 2 by Kato and Skinner Urban Techniques such as Hida s theory of p adic modular forms and big Galois representations play a crucial part Also a noncommutative Iwasawa theory of arbitrary p adic Lie extensions has been developed This volume aims to present a snapshot of the state of art of Iwasawa theory as of 2012 In particular it offers an introduction to Iwasawa theory based on a preparatory course by Chris Wuthrich and a survey of the proof of Skinner Urban based on a lecture course by Xin Wan

Séminaire de théorie des nombres, Paris 1991-92, 1993 My Numbers, My Friends Paulo Ribenboim, 2006-05-10 This selection of expository essays by Paulo Ribenboim should be of interest to mathematicians from all walks Ribenboim a highly praised author of several popular titles writes each essay in a light and humorous language without secrets making them thoroughly accessible to everyone with an interest in numbers This new collection includes essays on Fibonacci numbers prime numbers Bernoulli numbers and historical presentations of the main problems pertaining to elementary Arithmetic Algebraic Geometry G., van der Geer, F. number theory such as Kummers work on Fermat's last theorem Oort, J.H.M. Steenbrink, 2012-12-06 Arithmetic algebraic geometry is in a fascinating stage of growth providing a rich variety of applications of new tools to both old and new problems Representative of these recent developments is the notion of Arakelov geometry a way of completing a variety over the ring of integers of a number field by adding fibres over the Archimedean places Another is the appearance of the relations between arithmetic geometry and Nevanlinna theory or more precisely between diophantine approximation theory and the value distribution theory of holomorphic maps Inspired by these exciting developments the editors organized a meeting at Texel in 1989 and invited a number of mathematicians to write papers for this volume Some of these papers were presented at the meeting others arose from the discussions that took place They were all chosen for their quality and relevance to the application of algebraic geometry to arithmetic problems Topics include arithmetic surfaces Chjerm functors modular curves and modular varieties elliptic curves Kolyvagin s work K theory and Galois representations Besides the research papers there is a letter of Parshin and a paper of Zagier with is interpretations of the Birch Swinnerton Dyer Conjecture Research mathematicians and graduate students in algebraic geometry and number theory will find a valuable and lively view of the field in this state of the art selection Annales Scientifiques de L'École Normale Supérieure, 2006 Moment Maps and Combinatorial Invariants of Hamiltonian *Tn-spaces* Victor Guillemin, 2012-12-06 The action of a compact Lie group G on a compact sympletic manifold gives rise to some remarkable combinatorial invariants The simplest and most interesting of these is the moment polytope a convex polyhedron which sits inside the dual of the Lie algebra of G One of the main goals of this monograph is to describe what kinds of geometric information are encoded in this polytope For instance the first chapter is largely devoted to the Delzant

theorem which says that there is a one one correspondence between certain types of moment polytopes and certain types of symplectic G spaces. One of the most challenging unsolved problems in symplectic geometry is to determine to what extent Delzant's theorem is true of every compact symplectic G Space. The moment polytope also encodes quantum information about the actions of G Using the methods of geometric quantization one can frequently convert this action into a representations p of G on a Hilbert space and in some sense the moment polytope is a diagrammatic picture of the irreducible representations of G which occur as subrepresentations of p Precise versions of this item of folklore are discussed in Chapters 3 and 4 Also midway through Chapter 2 a more complicated object is discussed the Duistermaat Heckman measure and the author explains in Chapter 4 how one can read off from this measure the approximate multiplicities with which the irreducible representations of G occur in p This gives an excuse to touch on some results which are in themselves of great current interest the Duistermaat Heckman theorem the localization theorems in equivariant cohomology of Atiyah Bott and Berline Vergne and the recent extremely exciting generalizations of these results by Witten Jeffrey Kirwan Lalkman and others The last two chapters of this book are a self contained and somewhat unorthodoxtreatment of the theory of toric varieties in which the usual hierarchal relation of complex to symplectic is reversed.

L'Enseignement mathématique, 1989 Vols for 1965 include a separately paged section Bulletin bibliographique Graphs on Surfaces and Their Applications Sergei K. Lando, Alexander K. Zvonkin, 2013-04-17 Graphs drawn on two dimensional surfaces have always attracted researchers by their beauty and by the variety of difficult questions to which they give rise The theory of such embedded graphs which long seemed rather isolated has witnessed the appearance of entirely unexpected new applications in recent decades ranging from Galois theory to quantum gravity models and has become a kind of a focus of a vast field of research The book provides an accessible introduction to this new domain including such topics as coverings of Riemann surfaces the Galois group action on embedded graphs Grothendieck's theory of dessins d enfants the matrix integral method moduli spaces of curves the topology of meromorphic functions and combinatorial aspects of Vassiliev s knot invariants and in an appendix by Don Zagier the use of finite group representation theory The presentation is concrete throughout with numerous figures examples including computer calculations and exercises and should appeal to both graduate students and researchers Seminaire de Theorie des Nombres, Paris 1989-1990 D.
