Sensing With Terahertz Radiation:

Sensing with Terahertz Radiation Daniel Mittleman, 2013-02-26 One aspect of the field of THz radiation is the marriage of microwave and optical techniques. By its very nature, THz radiation bridges the gap between the microwave and optical regimes. The former can be characterized by the fact that most devices are comparable in size to the wavelength of the radiation. As a result, the propagation of energy in these devices is generally in the form of single mode or low order mode guided waves. In contrast, the optical and infrared ranges are generally characterized by beams containing many modes with dimensions much larger than the wavelength. Of course, there are exceptions to these rules, notably the single mode propagation of optical radiation in fibers. Nonetheless, the general description holds true. Because of these fundamental differences, it is natural that the techniques used in their implementation are quite distinct. Much of the research in the THz field has been based on the melding of these disparate ideas. *Sensing with Terahertz Radiation* Daniel Mittleman, 2014-03-12 The purpose of this book is two fold. First, the various different methods of accessing the THz range are discussed with a view to convince the reader that there have been qualitative and significant improvements over older more conventional techniques. The text makes it clear that these improvements enable practical real world applications of THz technology in a manner which would not have been possible before. Second, the demonstrations and feasibility tests described serve as compelling evidence of the utility of such devices. Due to the unique characteristics of THz radiation and its interaction with materials, these devices have substantial advantages over other competing technologies in a number of different areas. *Handbook of Terahertz Technology for Imaging, Sensing and Communications* D Saeedkia, 2013-01-16 The recent development of easy to use sources and detectors of terahertz radiation has enabled growth in applications of terahertz. THz imaging and sensing.
