## Separate Objects:

**Dependable Systems: Software, Computing, Networks** Jürg Kohlas, Bertrand Meyer, André Schiper, 2006-07-31

Modern civilization relies on a functioning information infrastructure. As a result, dependability has become a central issue in all disciplines of systems engineering and software architecture. Theories, methods, and tools that help to master the problems encountered in the design process and the management of operations are therefore of utmost importance for the future of information and communication technology. The present volume documents the results of a research program on Dependable Information and Communication Systems (DICS). The members of the project met in two workshops organized by the Hasler Foundation. This state-of-the-art survey contains 3 overview articles identifying major issues of dependability and presenting the latest solutions, as well as 10 carefully selected and revised papers depicting the research results originating from those workshops. The first workshop took place in Munchenwiler, Switzerland, in March 2004, and the second workshop, which marked the conclusion of the projects, in Lenzburg, Switzerland, in October 2005. The papers are organized in topical sections on surveys, dependable software, dependable computing, and dependable networks.

Mathematical Foundations of Image Processing and Analysis, Volume 2 Jean-Charles Pinoli, 2014-07-22. Mathematical imaging is currently a rapidly growing field in applied mathematics, with an increasing need for theoretical mathematics. This book, the second of two volumes, emphasizes the role of mathematics as a rigorous basis for imaging sciences. It provides a comprehensive and convenient overview of the key mathematical concepts, notions, tools, and frameworks involved in the various fields of gray tone and binary image processing and analysis, by proposing a large but coherent set of symbols and notations, a complete list of subjects, and a detailed bibliography. It establishes a bridge between the pure and applied mathematical disciplines and the processing and analysis of gray tone and binary images. It is accessible to readers who have neither extensive mathematical training nor prior knowledge in image processing and analysis. It is a self-contained book focusing on the mathematical notions, concepts, operations, structures, and frameworks that are beyond or involved in image processing and analysis. The notations are simplified as far as possible in order to be more explicative and consistent throughout the book, and the mathematical aspects are systematically discussed in the image processing and analysis context through practical examples or concrete illustrations. Conversely, the discussed applicative issues allow the role of mathematics to be highlighted. Written for a broad audience: students, mathematicians, image processing and analysis specialists, as well as other scientists and practitioners, the author hopes that readers will find their own way of using the book, thus providing a mathematical companion that can help mathematicians become more familiar with image processing and analysis, and likewise, image processing and image analysis scientists, researchers, and engineers gain a deeper understanding of mathematical notions and concepts.

never arrive you spend your life mastering disciplines Senge 2006 p 10 Piero Mella has set the objective of making Control Systems a topic that is in a certain sense simple and attractive by turning to the effective symbolism typical of Systems Thinking models and avoiding too technical and formal a treatment of the subject Thus readers should know that this is not an engineering physics biology or economics text nor a mathematics one either Technical or mathematical tools are not necessary to construct Control Systems instead the book adopts a highly simple and universal logic behind the notion itself of control process and the simple and universal action of the Control Systems that produce this process The Magic Ring Systems Thinking Approach to Control Systems is divided into 10 chapters Chapter 1 seeks to review the basic language of Systems Thinking and the models it allows us to create while Chapter 2 introduces the control process presenting the theoretical structure of four simple Control Systems we all can observe and manage In Chapter 3 a general typology of Control Systems is proposed with examples taken from observations of reality The view of Control Systems is broadened in Chapter 4 by introducing two important generalizations 1 multi lever Control Systems with levers that are independent or dependent of each other 2 multi objective systems with independent or interdependent objectives Chapter 5 outlines the guidelines for recognizing observing or designing Control Systems and presents the problems that arise regarding their logical realization introducing the fundamental distinction between symptomatic and structural control Chapters 6 9 undertake a mental journey through various environments increasingly broader in scope suggesting to the reader how to recognize therein Control Systems that by their ubiquitous presence make the world possible in all its manifestations Finally Chapter 10 covers ideas about a Discipline of Control Systems and the human aspects of control

**Theoretical Neuroscience: from Cell Chemistry to Cognition** L Andrew Coward,2013-08-23 The book explains how to understand cognition in terms of brain anatomy physiology and chemistry using an approach adapted from techniques for understanding complex electronic systems These techniques create hierarchies of information process based descriptions on different levels of detail where higher levels contain less information and can therefore describe complete cognitive phenomena but are more approximate The nature of the approximations are well understood and more approximate higher level descriptions can therefore be mapped to more precise detailed descriptions of any part of a phenomenon as required Cognitive phenomena the anatomy and connectivity of major brain structures neuron physiology and cellular chemistry are reviewed Various cognitive tasks are described in terms of information processes performed by different major anatomical structures These higher level descriptions are selectively mapped to more detailed physiological and chemical levels

**Presence, Volume I** Rupert Spira,2016-12-01 Our self aware presence knows no resistance to any appearance and as such is happiness itself like the empty space of a room it cannot be disturbed and is therefore peace itself like this page it is intimately one with whatever appears on it and is thus love itself and like water that is not affected by the shape of a wave it is pure freedom Causeless joy imperturbable peace love that knows no opposite and freedom at the heart of all experience this is our ever present nature under all circumstances *Unpacking the Collection* Sarah Byrne,Anne Clarke,Rodney Harrison,Robin Torrence,2011-06-27 Museum collections are often perceived as static entities hidden away in storerooms or trapped behind glass cases By focusing on the dynamic histories of museum collections new research reveals their pivotal role in shaping a wide range of social relations Over time and across space the interactions between these artefacts and the

people and institutions who made traded collected researched and exhibited them have generated complex networks of material and social agency In this innovative volume the contributors draw on a broad range of source materials to explore the cross cultural interactions which have created museum collections These case studies contribute significantly to the development of new theoretical frameworks to examine broader questions of materiality agency and identity in the past and present Grounded in case studies from individual objects and museum collections from North America Europe Africa the Pacific Islands and Australia this truly international volume juxtaposes historical geographical and cross cultural studies This work will be of great interest to archaeologists and anthropologists studying material culture as well as researchers in museum studies and cultural heritage management

**Iconicity in Syntax** John Haiman, 1985-01-01 The papers in this volume all explore one kind of functional explanation for various aspects of linguistic form iconicity linguistic forms are frequently the way they are because they resemble the conceptual structures they are used to convey or linguistic structures resemble each other because the different conceptual domains they represent are thought of in the same way The papers in Part I of this volume deal with aspects of motivation the ways in which the linguistic form is a diagram of conceptual structure and homologous with it in interesting ways Most of the papers in Part II focus on isomorphism the tendency to associate a single invariant meaning with each single invariant form The papers in Part III deal with the apparent arbitrariness that arises from competing motivations

**Attention and consciousness in different senses** Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03 Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e g focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or level of consciousness e g awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is a concomitant surge in research examining the relationship between attention and consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide

new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one s own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities

Digital Image Processing Bernd Jähne, 2013-03-09 From the reviews of the first edition I recommend this book to anyone seriously engaged in image processing It will clearly stretch the horizon of some readers and be a good reference for others This is not just another image processing book it is a book worth owning and a book worth reading several times J Electronic Imaging This practical guidebook uses the concepts and mathematics familiar to students of the natural sciences to provide them with a working knowledge of modern techniques of digital image processing It takes readers from basic concepts to current research topics and demonstrates how digital image processing can be used for data gathering in research Detailed examples of applications on PC based systems and ready to use algorithms enhance the text as do nearly 200 illustrations 16 in color The book also includes the most exciting recent advances such as reconstruction of 3 D objects from projections and the analysis of stereo images and image sequences **Animal Psychology for Biologists** Johan Abraham Bierens de

Haan, 1929 **Advanced Lectures on Software Engineering** Peter Müller, 2010-05-09 Software defects lead to enormous costs for the software industry and society as a whole While testing is useful to find bugs it is insufficient to show the absence of certain kinds of errors or that a program satisfies its specification Such high levels of software quality can be achieved by software verification that is by proving the correctness of a program with respect to its specification Software verification has seen tremendous progress during the last decade it continues to be an active research topic and is now also becoming increasingly popular among practitioners This tutorial contains selected papers from the LASER summer Schools 2007 and 2008 both of which focused on correctness Applied Software Verification in 2007 and Concurrency and Correctness in 2008 Topics covered include verification of fine grain concurrency and transactions the SCOOP model for concurrent object oriented programming the Spec programming and verification system verification in the prototype verification system PVS

and multi core chip design
