defect of existing methods for the determination of the polar of an airplane in flight is the impossibility of obtaining the thrust  
or the resistance of the propeller for any type airplane with any type engine The new method is based on the premise that for  
zero propeller thrust the mean angle of attack of the blade is approximately the same for all propellers if this angle is  
reckoned from the aerodynamic chord of the profile section This angle was determined from flight tests Knowing the mean  
angle of the blade setting the angle of attack of the propeller blade at zero thrust can be found and the propeller speed in  
gliding obtained The experimental check of the new method carried out on several airplanes gave positive results The basic  
assumptions for the construction of the polars and the method of analyzing the flight data are given      **Airline Operations**

discussions and confrontations Among the featured players are John Major Tony Blair Bill and Hillary Clinton Jean Kennedy Smith and Nelson Mandela As the preeminent republican strategist of his generation Gerry Adams provides the first comprehensive account of the principles and tactics underpinning modern Irish republicanism And in a world where peace processes are needed more urgently than ever A Farther Shore provides a template for conflict resolution
