Alternating-current Armature Winding Terrell Croft, 1924 **Stepper Motors : Fundamentals, Applications And Design** V. V. Athani, 1997 This is the first Indian publication devoted solely to stepper motors. It covers all aspects of stepper motors: construction, operation, and characteristics of stepper motors; electronic as well as microprocessor-based controllers for stepper motors; stepper motor applications in control instrumentation, computer peripheral devices, CNC systems, robotics, etc. And stepper motor analysis and design. Furthermore, the book contains certain special features which have appeared perhaps for the first time in a book of this nature, such as the latest RemP disk magnet stepper motor, microstepping controller, etc. Certain Indian contributions to stepper motor controller technology have been highlighted in microprocessor-based controllers for stepper motor for practising engineers and students. Selection and sizing of stepper motor has been discussed in detail and illustrated with typical illustrative examples. The

Communications and Information Processing Maotai Zhao, Junping Sha, 2012-06-28 The two-volume set CCIS 288 and 289 constitutes the thoroughly refereed post-conference proceedings of the First International Conference on Communications and Information Processing ICCIP 2012 held in Aveiro, Portugal, in March 2012. The 168 revised full papers of both volumes were carefully reviewed and selected from numerous submissions. The papers present the state of the art in communications and information processing and feature current research on the theory, analysis, design, test, and deployment related to communications and information processing systems. **Optimal and Robust Scheduling for Networked Control**

Systems Stefano Longo, Tingli Su, Guido Herrmann, Phil Barber, 2018-09-03 Optimal and Robust Scheduling for Networked Control Systems tackles the problem of integrating system components: controllers, sensors, and actuators in a networked control system. It is common practice in industry to solve such problems heuristically because the few theoretical results available are not comprehensive and cannot be readily applied by practitioners. This book offers a solution to the deterministic scheduling problem that is based on rigorous control theoretical tools but also addresses practical implementation issues. Helping to bridge the gap between control theory and computer science, it suggests that the consideration of communication constraints at the design stage will significantly improve the performance of the control system. Technical Results, Design Techniques, and Practical Applications. The book brings together well-known measures for robust performance as well as fast stochastic algorithms to assist designers in selecting the best network configuration and guaranteeing the speed of offline optimization. The authors propose a unifying framework for modelling NCSs with time-triggered communication and present technical results. They also introduce design techniques including for the codesign of a

controller and communication sequence and for the robust design of a communication sequence for a given controller Case studies explore the use of the FlexRay TDMA and time triggered control area network CAN protocols in an automotive control system Practical Solutions to Your Time Triggered Communication Problems This unique book develops ready to use engineering tools for large scale control system integration with a focus on robustness and performance It emphasizes techniques that are directly applicable to time triggered communication problems in the automotive industry and in avionics robotics and automated manufacturing *Automated Reasoning* Jasmin Blanchette, Laura Kovács, Dirk Pattinson, 2022-08-01 This volume LNAI 13385 constitutes the refereed proceedings of the 11th International Joint Conference on Automated Reasoning IJCAR 2022 held in Haifa Israel in August 2022 The 32 full research papers and 9 short papers presented together with two invited talks were carefully reviewed and selected from 85 submissions The papers focus on the following topics Satisfiability SMT Solving Arithmetic Calculi and Orderings Knowledge Representation and Justification Choices Invariance Substitutions and Formalization Modal Logics Proofs System and Proofs Search Evolution Termination and Decision Problems This is an open access book **Multiple Range Tests for Correlated and Heteroscedastic Means** David B.
