Series Associated With The Zeta And Related Functions:

  Series Associated With the Zeta and Related Functions Hari M. Srivastava,Junesang Choi,2001 In recent years there has been an increasing interest in problems involving closed form evaluations of and representations of the Riemann Zeta function at positive integer arguments as various families of series associated with the Riemann Zeta function s the Hurwitz Zeta function s a and their such extensions and generalizations as for example Lerch s transcendent or the Hurwitz Lerch Zeta function iI z s a Some of these developments have apparently stemmed from an over two century old theorem of Christian Goldbach 1690 1764 which was stated in a letter dated 1729 from Goldbach to Daniel Bernoulli 1700 1782 from recent rediscoveries of a fairly rapidly convergent series representation for 3 which is actually contained in a 1772 paper by Leonhard Euler 1707 1783 and from another known series representation for 3 which was used by Roger Apery 1916 1994 in 1978 in his celebrated proof of the irrationality of 3 This book is motivated essentially by the fact that the theories and applications of the various methods and techniques used in dealing with many different families of series associated with the Riemann Zeta function and its aforementioned relatives are to be found so far onlyin widely scattered journal articles Thus our systematic and unified presentation of these results on the evaluation and representation of the Zeta and related functions is expected to fill a conspicuous gap in the existing books dealing exclusively with these Zeta functions   Series Associated with the Zeta and Related Functions Hari M. and a new chapter on the theory and applications of the basic or q extensions of various special functions is included This book will be invaluable because it covers not only detailed and systematic presentations of the theory and applications of the various methods and techniques used in dealing with many different classes of series and integrals associated with the Zeta and related functions but stimulating historical accounts of a large number of problems and well classified tables of series and integrals Detailed and systematic presentations of the theory and applications of the various methods and techniques used in dealing with many different classes of series and integrals associated with the Zeta and related functions

Irresistible Integrals George Boros,Victor Moll,2004-06-21 This book first published in 2004 uses the problem of exact evaluation of definite integrals as a starting point for exploring many areas of mathematics **Contributions to the Theory of Zeta-Functions** Shigeru Kanemitsu,Haruo Tsukada,2014-12-15 This volume provides a systematic survey of almost all the equivalent assertions to the functional equations zeta symmetry which zeta functions satisfy thus streamlining previously published results on zeta functions The equivalent relations are given in the form of modular relations in Fox H function series which at present include all that have been considered as candidates for ingredients of a series The results are presented in a clear and simple manner for readers to readily apply without much knowledge of zeta functions This volume aims to keep a record of the 150 year old heritage starting from Riemann on zeta functions which are ubiquitous in all mathematical sciences wherever there is a notion of the norm It provides almost all possible equivalent relations to the zeta functions without requiring a reader s deep knowledge on their definitions This can be an ideal reference book for those studying zeta functions Analytic Number Theory, Approximation Theory, and Special Functions Gradimir V. Milovanović,Michael Th. Rassias,2014-07-08 This book in honor of Hari M Srivastava discusses essential developments in mathematical research in a variety of problems It contains thirty five articles written by eminent scientists from the international mathematical community including both research and survey works Subjects covered include analytic number theory combinatorics special sequences of numbers and polynomials analytic inequalities and applications approximation of functions and quadratures orthogonality and special and complex functions The mathematical results and open problems discussed in this book are presented in a simple and self contained manner The book contains an overview of old and new results methods and theories toward the solution of longstanding problems in a wide scientific field as well as new results in rapidly progressing areas of research The book will be useful for researchers and graduate students in the fields of mathematics physics and other computational and applied sciences Series of Bessel and Kummer-Type Functions Árpád Baricz,Dragana Jankov Maширević,Tibor K. Pogány,2018-03-24 This book is devoted to the study of certain integral representations for Neumann Kapteyn Schl milch Dini and Fourier series of Bessel and other special functions such as Struve and von Lommel functions The aim is also to find the coefficients of the Neumann and Kapteyn series as well as closed form expressions and summation formulas for the series of Bessel functions considered Some integral representations are deduced

using techniques from the theory of differential equations The text is aimed at a mathematical audience including graduate students and those in the scientific community who are interested in a new perspective on Fourier Bessel series and their manifold and polyvalent applications mainly in general classical analysis applied mathematics and mathematical physics
