Loosely Coupled The Mibing Pieces Of Web Services:

Loosely Coupled Doug Kaye,2003 *From Traditional Fault Tolerance to Blockchain* Wenbing Zhao,2021-04-28 This book covers the most essential techniques for designing and building dependable distributed systems from traditional fault tolerance to the blockchain technology Topics include checkpointing and logging recovery orientated computing replication distributed consensus Byzantine fault tolerance as well as blockchain This book intentionally includes traditional fault tolerance techniques so that readers can appreciate better the huge benefits brought by the blockchain technology and why it has been touted as a disruptive technology some even regard it at the same level of the Internet This book also expresses a grave concern on using traditional consensus algorithms in blockchain because with the limited scalability of such algorithms the primary benefits of using blockchain in the first place such as decentralization and immutability could be easily lost under cyberattacks

Building Dependable Distributed Systems Wenbing Zhao,2014-03-06 A one volume guide to the most essential techniques for designing and building dependable distributed systems Instead of covering a broad range of research works for each dependability strategy this useful reference focuses on only a selected few usually the most seminal works the most practical approaches or the first publication of each approach explaining each in depth usually with a comprehensive set of examples Each technique is dissected thoroughly enough so that readers who are not familiar with dependable distributed computing can actually grasp the technique after studying the book Building Dependable Distributed Systems consists of eight chapters The first introduces the basic concepts and terminology of dependable distributed computing and also provides an overview of the primary means of achieving dependability Checkpointing and logging mechanisms which are the most commonly used means of achieving limited degree of fault tolerance are described in the second chapter Works on recovery oriented computing focusing on the practical techniques that reduce the fault detection and recovery times for Internet based applications are covered in chapter three Chapter four outlines the replication techniques for data and service fault tolerance This chapter also pays particular attention to optimistic replication and the CAP theorem Chapter five explains a few seminal works on group communication systems Chapter six introduces the distributed consensus problem and covers a number of Paxos family algorithms in depth The Byzantine generals problem and its latest solutions including the seminal Practical Byzantine Fault Tolerance PBFT algorithm and a number of its derivatives are introduced in chapter seven The final chapter details the latest research results surrounding application aware Byzantine fault tolerance which represents an important step forward in the practical use of Byzantine fault tolerance techniques

Agile and Lean Service-Oriented Development: Foundations, Theory, and Practice Wang, Xiaofeng, Ali, Nour, Ramos, Isidro, Vidgen, Richard,2012-11-30 Challenges in unpredictable markets changing customer requirements and advancing information technologies have lead to progression towards service oriented engineering and agile and lean software development These prevailing approaches to software systems provide solutions to challenges in demanding business

environments Agile and Lean Service Oriented Development Foundations Theory and Practice explores the groundwork of service oriented and agile and lean development and the conceptual basis and experimental evidences for the combination of the two approaches Highlighting the best tools and guidelines for these developments in practice this book is essential for researchers and practitioners in the software development and service computing fields **Advanced Information**

Systems Engineering Pascal van Eck,Jaap Gordijn,Roel J. Wieringa,2009-05-25 This book constitutes the refereed proceedings of the 21st International Conference on Advanced Information Systems Engineering CAiSE 2009 held in Amsterdam The Netherlands on June 8 12 2009 The 36 papers presented in this book together with 6 keynote papers were carefully reviewed and selected from 230 submissions The topics covered are model driven engineering conceptual modeling quality and data integration goal oriented requirements engineering requirements and architecture service orientation Web service orchestration value driven modeling workflow business process modeling and requirements engineering

Future-Proof Software-Systems Frank J. Furrer,2019-09-25 This book focuses on software architecture and the value of architecture in the development of long lived mission critical trustworthy software systems The author introduces and demonstrates the powerful strategy of Managed Evolution along with the engineering best practice known as Principle based Architecting The book examines in detail architecture principles for e g Business Value Changeability Resilience and Dependability The author argues that the software development community has a strong responsibility to produce and operate useful dependable and trustworthy software Software should at the same time provide business value and guarantee many quality of service properties including security safety performance and integrity As Dr Furrer states Producing dependable software is a balancing act between investing in the implementation of business functionality and investing in the quality of service properties of the software systems The book presents extensive coverage of such concepts as Principle Based Architecting Managed Evolution Strategy The Future Principles for Business Value Legacy Software Modernization Migration Architecture Principles for Changeability Architecture Principles for Resilience Architecture Principles for Dependability The text is supplemented with numerous figures tables examples and illustrative quotations Future Proof Software Systems provides a set of good engineering practices devised for integration into most software development processes dedicated to the creation of software systems that incorporate Managed Evolution *Higher-Order Components*

for Grid Programming Jan Dünneberger,Sergei Gorlatch,2009-06-24 A major challenge in grid computing remains the application software development for this new kind of infrastructure Grid application programmers have to take into account several complicated aspects distribution of data and computations parallel computations on different sites and processors heterogeneity of the involved computers load balancing etc Grid programmers thus demand novel programming methodologies that abstract over such technical details while preserving the beneficial features of modern grid middleware For this purpose the authors introduce Higher Order Components HOCs HOCs implement generic parallel distributed

processing patterns together with the required middleware support and they are offered to users via a high level service interface. Users only have to provide the application specific pieces of their programs as parameters while low level implementation details such as the transfer of data across the grid are handled by the HOCs. HOCs were developed within the CoreGRID European Network of Excellence and have become an optional extension of the popular Globus middleware. The book provides the reader with hands on experience describing a broad collection of example applications from various fields of science and engineering including biology physics etc. The Java code for these examples is provided online complementing the book. The expected application performance is studied and reported for extensive performance experiments on different testbeds including grids with worldwide distribution. The book is targeted at graduate students advanced professionals and researchers in both academia and industry. Readers can raise their level of knowledge about methodologies for programming contemporary parallel and distributed systems and furthermore they can gain practical experience in using distributed software. Practical examples show how the complementary online material can easily be adopted in various new projects.

Grid and Cooperative Computing - GCC 2004 Hai Jin, Yi Pan, Nong Xiao, Jianhua Sun, 2004-09-29 Welcome to the proceedings of GCC2004 and the city of Wuhan. Grid computing has become a mainstream research area in computer science and the GCC conference has become one of the premier forums for presentation of new and exciting research in all aspects of grid and cooperative computing. The program committee is pleased to present the proceedings of the 3rd International Conference on Grid and Cooperative Computing GCC2004 which comprises a collection of excellent technical papers posters workshops and keynote speeches. The papers accepted cover a wide range of exciting topics including resource grid and service grid information grid and knowledge grid grid monitoring management and organization tools grid portal grid service Web services and their QoS service orchestration grid middleware and toolkits software glue technologies grid security innovative grid applications advanced resource reservation and scheduling performance evaluation and modeling computer supported cooperative work P2P computing automatic computing and meta information management. The conference continues to grow and this year a record total of 581 manuscripts including workshop submissions were submitted for consideration. Expecting this growth the size of the program committee was increased from 50 members for GCC 2003 to 70 in GCC 2004. Relevant differences from previous editions of the conference it is worth mentioning a significant increase in the number of papers submitted by authors from outside China and the acceptance rate was much lower than for previous GCC conferences. From the 427 papers submitted to the main conference the program committee selected only 96 regular papers for oral presentation and 62 short papers for poster presentation in the program.

E-business and Telecommunications Joaquim Filipe, Mohammad S. Obaidat, 2008-11-02 This book contains the

best papers of the 4th International Conference on E business and Telecommunications ICETE which was held during July 28-31 2007 in Barcelona Spain The conference reflects a continuing effort to increase the dissemination of recent research results among professionals who work in the areas of e business and telecommunications ICETE is a joint international conference integrating four major areas of knowledge that are divided into four corresponding conferences ICE B International Conference on e Business SECRIPT International Conference on Security and Cryptography WINSYS International Conference on Wireless Information Systems and SIGMAP International Conference on Signal Processing and Multimedia The program of this joint conference included several outstanding keynote lectures presented by internationally renowned distinguished researchers who are experts in the various ICETE areas Their keynote speeches contributed to the overall quality of the program and heightened the significance of the theme of the conference The conference topic areas define a broad spectrum in the key areas of business and telecommunications This wide view has made it appealing to a global audience of engineers scientists business practitioners and policy experts The papers accepted and presented at the conference demonstrated a number of new and innovative solutions for e business and telecommunication networks and systems showing that the technical problems in these fields are challenging related and significant

Personalized Information Retrieval and Access: Concepts, Methods and Practices González, Rafael Andrés, Chen, Nong, Dahanayake, Ajantha, 2008-03-31 Global information retrieval and anywhere anytime information access has stimulated a need to design and model the personalized information search in a flexible and agile way that can use the specific personalization techniques algorithms and available technology infrastructure to satisfy high level functional requirements for personalization Personalized Information Retrieval and Access Concepts Methods and Practices surveys the main concepts methods and practices of personalized information retrieval and access in today's data intensive dynamic and distributed environment and provides students researchers and practitioners with authoritative coverage of recent technological advances that are shaping the future of globally distributed information retrieval and anywhere anytime information access

Open Source Software: Implementation and Management Paul Kavanagh, 2004-08-19 In 2004 5 over half of IT professionals will be looking at open source most for the first time This book provides key tools for System administrators Network Administrators IT project managers and consultants who must evaluate and deploy open source software This book details open source successes so far explains which scenarios are the most realistic opportunities now then gives the details needed to select these solutions adopt the best tools and practices introduce them to an organization implement and manage them The IT professional can use this book to review opportunities in their organization evaluate components such as Apache Linux and OpenOffice against systems they know and follow up in detail on their specific interests here and through referred resources Deployment scenarios categorized by function and industry Rules of thumb on where and when open source software is or is not the right choice Roadmaps for deployment in terms of the components of open source

Digitalisation,

Innovation, and Transformation Kecheng Liu, Keiichi Nakata, Weizi Li, Cecilia Baranauskas, 2018-07-05 This book constitutes the refereed proceedings of the 18th IFIP WG 8.1 International Conference on Informatics and Semiotics in Organisations ICISO 2018 held in Reading UK in July 2018. The 30 full papers and 4 posters presented were carefully reviewed and selected from 38 submissions. The papers are organized in the following topical sections: organisational semiotics theory and application; digital business ecosystems and value networks; socially aware knowledge engineering and business intelligence and analytics.

Methods in Biomedical Informatics Indra Neil Sarkar, 2013-09-03 Beginning with a survey of fundamental concepts associated with data integration, knowledge representation and hypothesis generation from heterogeneous data sets, *Methods in Biomedical Informatics* provides a practical survey of methodologies used in biological, clinical and public health contexts. These concepts provide the foundation for more advanced topics like information retrieval, natural language processing, Bayesian modeling and learning classifier systems. The survey of topics then concludes with an exposition of essential methods associated with engineering personalized medicine and linking of genomic and clinical data. Within an overall context of the scientific method, *Methods in Biomedical Informatics* provides a practical coverage of topics that is specifically designed for 1) domain experts seeking an understanding of biomedical informatics approaches for addressing specific methodological needs or 2) biomedical informaticians seeking an approachable overview of methodologies that can be used in scenarios germane to biomedical research. Contributors represent leading biomedical informatics experts: individuals who have demonstrated effective use of biomedical informatics methodologies in the real world, high quality biomedical applications. Material is presented as a balance between foundational coverage of core topics in biomedical informatics with practical in the trenches scenarios. Contains appendices that function as primers on 1) Unix 2) Ruby 3) Databases and 4) Web Services.

Rapid Integration of Software Engineering Techniques Nicolas Guelfi, 2005-05-18 This book constitutes the thoroughly refereed postproceedings of the First International Workshop on Rapid Integration of Software Engineering Techniques RISE 2004 held in Luxembourg Kirchberg Luxembourg in November 2004. The 12 revised full papers presented together with an invited paper went through two rounds of reviewing and improvement and were selected from 28 initial submissions. Among the topics addressed are software architecture, software process, component driven design, dynamic service verification, model checking, model based testing, exception handling, metamodeling, UML state machines and model centric development.

Context-Aware Mobile and Ubiquitous Computing for Enhanced Usability: Adaptive Technologies and Applications Stojanovic, Dragan, 2009-04-30 Provides research developments on mobile technologies and services. Explains how users of such applications access intelligent and adaptable information services maximizing convenience and minimizing intrusion.

Managed Evolution Stephan Murer, Bruno Bonati, 2010-10-29 Many organizations critically depend on very large information systems. In the authors' experience, these organizations often struggle to find the right strategy to sustainably develop their systems. Based on their own experience at

a major bank over more than a decade the authors have developed a successful strategy to deal with these challenges including A thorough analysis of the challenges associated with very large information systems An assessment of possible strategies for the development of these systems resulting in managed evolution as the preferred strategy Describing key system aspects for the success of managed evolution such as architecture management integration architecture and infrastructure Developing the necessary organizational cultural governance and controlling mechanisms for successful execution

Enterprise Systems Engineering George Rebovich, Jr., Brian E. White, 2016-04-19 Although usually well funded systems development projects are often late to market and over budget Worse still many are obsolete before they can be deployed or the program is cancelled before delivery Clearly it is time for a new approach With coverage ranging from the complex characteristics and behaviors of enterprises to the challenges they pose for engineering and technology Enterprise Systems Engineering Advances in the Theory and Practice examines the impacts of enterprise processes and leading edge technologies on the evolution of an enterprise As much about history as it is about systems engineering this book provides a snapshot of the early thinking in enterprise systems engineering a snapshot taken before the memory of its perspective is corrupted by time It discusses emerging methods essential to successful systems engineering The editors define and examine key building blocks of the evolving field of enterprise systems engineering They address the issues of the changing nature of systems engineering lay out a recommended direction for the future and provide a unified basis for moving toward a mature discipline with the expanded scope During the last decade something has changed in the way people work together Seldom do isolated groups work on local problems to build stove pipe solutions and systems seldom are developed in a social political economic or technical vacuum Yet concerted attempts to better implement systems engineering seemed not to improve the situation Standing on the threshold of a new era in systems engineering the editors point an arrow in the direction of systems engineering evolution a direction that is equal parts social change and technological change
