One method of solving an equation is to use a flowchart and think about **inverse operations**

eg solve the equation $4x = 12.5$
x	$\times 4$	$4x$
3.125	$\div 4$	12.5

The solution is x = **3.125**

eg solve the equation $n + 8 = 3$

n	$+8$	$n+8$
-5	-8	3

The solution is n = **-5**

eg solve the equation $\frac{a}{3} = 7$

a	$\div 3$	$\frac{a}{3}$
21	$\times 3$	7

The solution is a = **21**

eg solve the equation $x - 4.7 = 0$

x	-4.7	$x - 4.7$
4.7	$+4.7$	4.7

The solution is x = **4.7**

the theory of inverse and ill posed problems as wall as in ist applications To reflect these accomplishments the authors included additional material e g comments to each chapter and a list of monographs with annotations <u>Computer Modelling in Tomography and Ill-Posed Problems</u> Mikhail M. Lavrent'ev,Sergei M. Zerkal,Oleg E. Klibanov,Alexander A. Timonov,2012-04-17 In this monograph the main subject of the author s considerations is coefficient inverse problems Arising in many areas of natural sciences and technology such problems consist of determining the variable coefficients of a certain differential operator defined in a domain from boundary measurements of a solution or its functionals Although the authors pay strong attention to the rigorous justification of known results they place the primary emphasis on new concepts and developments **Methods for Solving Operator Equations** Vitaliĭ Pavlovich Tanana, **Inverse Problems for Kinetic and Other Evolution Equations** Yu. E. Anikonov,2014-07-24 This monograph deals with methods of studying multidimensional inverse problems for kinetic and other evolution equations in particular transfer equations The methods used are applied to concrete inverse problems especially multidimensional inverse problems applicable in linear and nonlinear statements A significant part of the book contains formulas and relations for solving inverse problems including formulas for the solution and coefficients of kinetic equations differential difference equations nonlinear evolution equations and second order equations *Integral Geometry and Inverse Problems for Kinetic Equations* A. Kh Amirov,2001 In this monograph a new method for proving the solvability of integral geometry problems and inverse problems for kinetic equations is presented The application of this method has led to interesting problems of the Dirichlet type for third order differential equations the solvability of which appears to depend on the geometry of the domain for which the problem is stated Another subject of the book is the problem of integral geometry on paraboloids in particular the uniqueness of solutions to the Goursat problem for a differential inequality which implies new theorems on the uniqueness of solutions to this problem for a class of quasilinear hyperbolic equations A class of multidimensional inverse problems associated with problems of integral geometry and the inverse problem for the quantum kinetic equations are also included This monograph will be of value and interest to mathematicians who deal with problems of integral geometry direct and inverse problems of mathematical physics and geophysics and for specialists in computerized tomography **An Introduction to Identification Problems via Functional Analysis** Alfredo Lorenzi,2014-07-24 this monograph is based on two courses in computational mathematics and operative research which were given by the author in recent years to doctorate and PhD students The text focuses on an aspect of the theory of inverse problems which is usually referred to as identification of parameters numbers vectors matrices functions appearing in differential or integrodifferential equations The parameters of such equations are either quite unknown or partially unknown however knowledge about these is usually essential as they describe the intrinsic properties of the material or substance under consideration *Theory of Linear Optimization* Ivan Ivanovich Eremin,2002-01-01 This monograph is devoted to the basic component of the theory of linear optimisation problems systems of linear inequalities Such an approach is exact in both a historical and methodological sense In the first two chapters attention focuses on economic interpretation of models theorems and approaches The other chapters are dedicated to less traditional problems of linear optimisation such as improper problems and duality lexicographic problems

and duality piecewise linear problems and duality etc The book also covers some general methods for calculating processes for certain problems of linear optimisation the problem of stability and correctness This book contains original scientific material which is of value and interest to students and specialists in mathematical optimisation operation research economic mathematical modelling and related disciplines **Inverse Problems of Wave Processes** A. S. Blagoveshchenskii,2014-07-24 This monograph covers dynamical inverse problems that is problems whose data are the values of wave fields It deals with the problem of determination of one or more coefficients of a hyperbolic equation or a system of hyperbolic equations The desired coefficients are functions of point Most attention is given to the case where the required functions depend only on one coordinate The first chapter of the book deals mainly with methods of solution of one dimensional inverse problems The second chapter focuses on scalar inverse problems of wave propagation in a layered medium In the final chapter inverse problems for elasticity equations in stratified media and acoustic equations for moving media are given **Poorly Visible Media in X-Ray Tomography** V. G. Nazarov,Iu. V. Prokhorov,2002-01-01 The tomography problem considered in this volume of the Inverse and Ill Posed Problems Series consists of finding an essential part of information about the internal structure of an unknown medium More particularly the contact boundaries between various materials in the medium are sought This investigation is implemented by studying an appropriate mathematical model which is represented as a transport equation linear Boltzmann s equation together with certain boundary conditions Both theoretical and numerical methods have been used and the results consist of proved theorems computer testing of the corresponding algorithms together with a number of tables This book may be considered as a continuation and application of Transport Equation and Tomography by D S Anikonov A E Kovtanyuk and I V Prokhorov previously published in this series **Methods for Solving Operator Equations** V. P. Tanana,2012-02-13 The Inverse and Ill Posed Problems Series is a series of monographs publishing postgraduate level information on inverse and ill posed problems for an international readership of professional scientists and researchers The series aims to publish works which involve both theory and applications in e g physics medicine geophysics acoustics electrodynamics tomography and ecology **Coefficient Inverse Problems for Parabolic Type Equations and Their Application** P. G. Danilaev,2001-01-01 As a rule many practical problems are studied in a situation when the input data are incomplete For example this is the case for a parabolic partial differential equation describing the non stationary physical process of heat and mass transfer if it contains the unknown thermal conductivity coefficient Such situations arising in physical problems motivated the appearance of the present work In this monographthe author considers numerical solutions of the quasi inversion problems to which the solution of the original coefficient inverse problems are reduced Underground fluid dynamics is taken as a field of practical use of coefficient inverse problems The significance of these problems for this application domain consists in the possibility to determine the physical fields of parameters that characterize the filtration properties of porous media oil strata This provides

the possibility of predicting the conditions of oil field development and the effects of the exploitation The research carried out by the author showed that the quasi inversion method can be applied also for solution of interior coefficient inverse problems by reducing them to the problem of continuation of a solution to a parabolic equation This reduction is based on the results of the proofs of the uniqueness theorems for solutions of the corresponding coefficient inverse problems **Surveys on Solution Methods for Inverse Problems** David Colton,Heinz W. Engl,Alfred K. Louis,Joyce McLaughlin,William Rundell,2012-12-06 Inverse problems are concerned with determining causes for observed or desired effects Problems of this type appear in many application fields both in science and in engineering The mathematical modelling of inverse problems usually leads to ill posed problems i e problems where solutions need not exist need not be unique or may depend discontinuously on the data For this reason numerical methods for solving inverse problems are especially difficult special methods have to be developed which are known under the term regularization methods This volume contains twelve survey papers about solution methods for inverse and ill posed problems and about their application to specific types of inverse problems e g in scattering theory in tomography and medical applications in geophysics and in image processing The papers have been written by leading experts in the field and provide an up to date account of solution methods for inverse problems
