Methods to Study Litter Decomposition Manuel A.S. Graça, Felix Bärlocher, Mark O. Gessner, 2007-07-31 The primary objective of this book is to provide students and laboratory instructors at universities and professional ecologists with a broad range of established methods to study plant litter decomposition Detailed protocols for direct use in the field or laboratory are presented in an easy to follow step by step format A short introduction to each protocol reviews the ecological significance and principles of the technique and points to key references [Methods to Study Litter Decomposition](#) Felix Bärlocher, Mark O. Gessner, Manuel A.S. Graça, 2020-07-30 The primary objective of this book is to provide students and laboratory instructors at universities and professional ecologists with a broad range of established methods to study plant litter decomposition Detailed protocols for direct use in the field or laboratory are presented in an easy to follow step by step format A short introduction to each protocol reviews the ecological significance and principles of the technique and points to key references *The Ecology of Plant Litter Decomposition in Stream Ecosystems* Christopher M. Swan, Luz Boyero, Cristina Canhoto, 2021-06-30 With almost 90% of terrestrial plant material entering the detrital pool the processing of this significant carbon source is a critical ecosystem function to understand Riverine ecosystems are estimated to receive process and transport nearly 1.9 Pg of terrestrial carbon per year globally highlighting the focus many freshwater ecologists have on the factors that explain decomposition rates of senesced plant material Since Webster and Benfield offered the first comprehensive review of these factors in 1986 there has been an explosion of research addressing key questions about the ecological interactions at play Ecologists have developed field and laboratory techniques as well as created global scale collaborations to disentangle the many drivers involved in the decomposition process This book encapsulates these 30 years of research describing the state of knowledge on the ecology of plant litter decomposition in stream ecosystems in 22 chapters written by internationally renowned experts on the subject **Forest Ecosystems** Juan A. Blanco, Yueh-Hsin Lo, 2012-03-07 The common idea for many people is that forests are just a collection of trees However they are much more than that They are a complex functional system of interacting and often interdependent biological physical and chemical components the biological part of which has evolved to perpetuate itself This complexity produces combinations of climate soils trees and plant species unique to each site resulting in hundreds of different forest types around the world Logically trees are an important component for the research in forest ecosystems but the wide variety of other life forms and abiotic components in most forests means that other elements such as wildlife or soil nutrients should also be the focal point in ecological studies and management plans to be carried out in forest ecosystems In this book the readers can find the latest research related to forest ecosystems but with a different twist The research described here is not just on trees and is focused on the other components structures and functions that are usually overshadowed by the focus on trees but are equally important to maintain the diversity function and services provided by forests The first section of this book explores

the structure and biodiversity of forest ecosystems whereas the second section reviews the research done on ecosystem structure and functioning The third and last section explores the issues related to forest management as an ecosystem level activity all of them from the perspective of the other parts of a forest

Ecosystems in a Human-Modified Landscape, 2011-06-15 Advances in Ecological Research is one of the most successful series in the highly competitive field of ecology Each volume publishes topical and important reviews interpreting ecology as widely as in the past to include all material that contributes to our understanding of the field Topics in this invaluable series include the physiology populations and communities of plants and animals as well as landscape and ecosystem ecology Updates and informs the reader on the latest research findings Written by leading experts in the field Highlights areas for future investigation

The Impacts of Climate Change and Human Activities on the Structure and Function of Wetland/Grassland Ecosystems Zhongqing Yan, Kerou Zhang, Yunpeng Luo, Xiaodong Zhang, 2023-10-31 Wetlands and grassland are important components of natural ecosystems which have rich values in maintaining ecological balance regional economy and human development Wetlands can provide freshwater resources and food sources for human beings purify the water environment and mitigate climate change The grassland ecosystem has such ecological functions as windbreak sand fixation soil preservation climate regulation air purification water conservation and so on which are closely related to human survival and well being In recent years climate change and human activities have caused a profound impact on the structure and function of wetland and grassland ecosystems and the problems of decline in size and function have attracted extensive attention from researchers globally However there are still many uncertainties about the variety of wetland and grassland ecosystem composition structure and dynamics as well as how they respond and adapt to climate change and human activities

Dynamic Sedimentary Environments of Mangrove Coasts Daniel Friess, Frida Sidik, 2020-12-05 Dynamic Sedimentary Environments of Mangrove Coasts provides knowledge on the importance of sedimentary dynamics in managing mangrove forests In the first part of the book the editors seamlessly offer a general introduction of mangrove sedimentary dynamics This leads into more in depth information on soil surface elevation change sea level rise and the importance of sedimentary dynamics in the loss or gain of blue carbon The book concludes the discussion of mangrove sedimentary dynamics by addressing the issues of climate change e.g sea level rise and blue carbon on mangrove restoration and sediment This book will assist coastal managers and academics in addressing the gaps in mangrove restoration and coastal management As such it will be a valuable reference for advanced undergraduate students graduate students researchers academics in the field of coastal restoration and coastal management practitioners Provides a state of the art summary of research into sedimentary dynamics in mangrove forests Includes updates on issues of climate change relevant to mangroves

such as blue carbon and sea level rise Presents scientific background and successful case studies for mangrove restoration that can solve problems relating to mangrove management

The Structure and Function of Aquatic Microbial Communities Christon J. Hurst, 2019-05-13 This book discusses how aquatic microbial communities develop interactive metabolic coordination both within and between species to optimize their energetics It explains that microbial community structuration often includes functional stratification among a multitude of organisms that variously exist either suspended in the water lodged in sediments or bound to one another as biofilms on solid surfaces The authors describe techniques that can be used for preparing and distributing microbiologically safe drinking water which presents the challenge of successfully removing the pathogenic members of the aquatic microbial community and then safely delivering that water to consumers Drinking water distribution systems have their own microbial ecology which we must both understand and control in order to maintain the safety of the water supply Since studying aquatic microorganisms often entails identifying them the book also discusses techniques for successfully isolating and cultivating bacteria As such it appeals to microbiologists microbial ecologists and water quality scientists

Ecological Effects of Water-level Fluctuations in Lakes Karl M. Wantzen, Karl-Otto Rothhaupt, Martin Mörtl, Marco Cantonati, László G.-Tóth, Philipp Fischer, 2009-05-06 Most aquatic ecosystems have variable water levels These water level fluctuations WLF have multiple effects on the organisms above and below the waterline Natural WLF patterns in lakes guarantee both productivity and biodiversity while untimely floods and droughts may have negative effects Human impacts on WLF have led to a stabilization of the water levels of many lakes by hydraulic regulation untimely drawdown due to water use or floods due to water release from hydropower plants in the catchments This book provides a first review in this field It presents selected papers on the ecological effects of WLF in lakes resulting from a workshop at the University of Konstanz in winter 2005 Issues addressed here include the extent of WLF and analyses of their effects on different groups of biota from microorganisms to vertebrates Applied issues include

recommendations for the hydrological management of regulated lakes to reduce negative impacts and a conceptual framework is delivered by an extension of the floodpulse concept for lakes Current impacts on water use including increasing demands on drinking and irrigation water hydropower etc and climate change effects on WLF make this book an essential resource for aquatic ecologists engineers and decision makers dealing with the management of lake ecosystems and their catchments

Marine Fungi E. B. Gareth Jones,Ka-Lai Pang,2012-08-31 Marine fungi play a major role in marine and mangrove ecosystems Understanding how higher fungi with their spectrum of cellulolytic and ligninolytic enzymes degrade wood tissue while labyrinthuloids and thraustochytrids further contribute to the dissolved organic matter entering the open ocean is essential to marine ecology This work provides an overview of marine fungi including morphology and ultrastructure phylogeny biogeography and biodiversity Increasingly biotechnology is also turning to these organisms to develop new bioactive compounds and to address problems such as decomposition of materials in the ocean and bioremediation of oil spills These potential applications of marine fungi are also treated In the light of massive marine oil spills in the past years the importance of understanding marine fungi and their role in the food chain cannot be underestimated

Forest Hydrology and Watershed Fan-Rui Meng,Altaf Arain,Qiang Li,Michael Pisaric,2019-08-20 Hydrological processes in forested watersheds are influenced by environmental physiological and biometric factors such as precipitation radiation temperature species type leaf area and extent and structure of forest ecosystems Over the past two centuries forest coverage and forest structures have been impacted globally by anthropogenic activities for example forest harvesting and conversion of forested landscapes for plantations and urbanization In addition since the industrial revolution climate change has resulted in profound impacts on forest ecosystems due to higher carbon dioxide CO₂ concentration or CO₂ fertilization warmer temperatures changes in frequency and intensity of extreme weather events and natural disturbances As a result hydrological processes in forested watersheds have been altered by these natural and anthropogenic factors and these changes are expected to accelerate due to future changing climatic conditions Hence understanding how various environmental physiological and physical drivers interactively influence hydrological and biogeochemical processes in forest ecosystems is critical for sustainable water supply in forested watersheds About 21% of the global population depends on water sources that originate in forested catchments where forest coverage larger than 30% Furthermore there are knowledge gaps in our understanding of the mechanism of hydrological and hydrochemical cycles in forested watersheds This Special Issue addresses these gaps in our knowledge and includes twelve papers in the following three major research themes in forest watershed areas

Methods in Biogeochemistry of Wetlands Ronald D. DeLaune,K. Remesh Reddy,Curtis J. Richardson,J. Patrick Megonigal,2020-01-22 Wetlands occur at the interface of upland and aquatic ecosystems making them unique environments that are vital to ecosystem health But wetlands are also challenging to assess and understand Wetland researchers have developed specialized analytical methods and sampling techniques that are now assembled for the first
