*Extracellular Targeting of Cell Signaling in Cancer* James W. Janetka, Roseann M. Benson, 2018-05-10 International experts present innovative therapeutic strategies to treat cancer patients and prevent disease progression Extracellular Targeting of Cell Signaling in Cancer highlights innovative therapeutic strategies to treat

cancer metastasis and prevent tumor progression Currently there are no drugs available to treat or prevent metastatic cancer other than non selective toxic chemotherapy With contributions from an international panel of experts in the field the book integrates diverse aspects of biochemistry molecular biology protein engineering proteomics cell biology pharmacology biophysics structural biology medicinal chemistry and drug development A large class of proteins called kinases are enzymes required by cancer cells to grow proliferate and survive apoptosis death by the immune system Two important kinases are MET and RON which are receptor tyrosine kinases RTKs that initiate cell signaling pathways outside the cell surface in response to extracellular ligands growth factors Both kinases are oncogenes which are required by cancer cells to migrate away from the primary tumor invade surrounding tissue and metastasize MET and RON reside on both cancer cells and the support cells surrounding the tumor called the microenvironment MET and RON are activated by their particular ligands the growth factors HGF and MSP respectively Blocking MET and RON kinase activation and downstream signaling is a promising therapeutic strategy for preventing tumor progression and metastasis Written for cancer physicians and biologists as well as drug discovery and development teams in both industry and academia this is the first book of its kind which explores novel approaches to inhibit MET and RON kinases other than traditional small molecule kinase inhibitors These new strategies target key tumorigenic processes on the outside of the cell such as growth factor activation by proteases These unique strategies have promising potential as an improved alternative to kinase inhibitors chemotherapy or radiation treatment

Renal Cell Carcinoma Nizar M. Tannir, 2014-10-08 While patients with metastatic renal cell carcinoma mRCC are now living longer with improved quality of life the success of novel

therapies for mRCC has created challenges for practicing oncologists. Many patients who initially respond to targeted therapies ultimately develop progressive disease due to acquired resistance to these agents. Additionally, some patients do not respond at all to any of the currently approved targeted agents, underscoring the need for continued and concerted efforts to identify other relevant targets and pursue alternative therapeutic strategies. Part of the Oxford American Oncology Library, *Renal Cell Carcinoma* is a concise handbook that addresses the complex management of patients with mRCC. The book begins with a review of the epidemiology, pathology, and biology of renal cell carcinoma, followed by chapters on specific targeted therapies and managing complications. The final chapters discuss supportive and integrative care and emerging therapies.
