Inhalation Uptake of Selected Chemical Vapors at Trace Levels Otto G. Raabe, 1986 *New Trends in Pharmacokinetics* Aldo Rescigno, Ajit K. Thakur, 2012-12-06 The last decade or so has witnessed tremendous progress in methodology in the field of drug development in general and pharmacokinetics in particular Clinical pharmacokinetics is using new tools for probing into the black box once being accessible only partly through experimental techniques and mostly through mathematical and computer means Development of computerized scanning positron emission tomography PET stereoselectivity and other techniques are now enabling investigators to have better pictures of the systems they are studying Mathematical models through computer simulation and statistical estimation mostly due to easy access because of inexpensive yet powerful personal computers are enabling us to investigate ultrastructures and their functional connectivity in more detail As a consequence new hypotheses are being formed and tested in various related fields In clinical pharmacokinetics mostly due to mathematical modeling more accurate interspecies scaling of pharmacokinetic parameters and dosimetry can be done nowadays The concept of a human is a bigger rat does not necessarily fly as a consequence Pharmacokinetic concepts are becoming powerful tools in meaningful carcinogenic and toxic risk extrapolation of different chemicals in humans New dose delivery designs are being formulated using pharmacokinetic techniques for different pharmaceutical compounds Investigations continue in the academia research institutions pharmaceutical biotechnological and agricultural industries in developmental and physiological aspects of different chemicals for the benefit of mankind The idea of a school on New Trends in Pharmacokinetics from which the present publication was made possible took shape over almost a year

Arsenic Exposure and Health Effects III W.R. Chappell, C.O. Abernathy, R.L. Calderon, 1999-12-06 The Society of Environmental Geochemistry and Health SEGHS Third International Conference on Arsenic Exposure and Health Effects was held from July 12 15 1998 in San Diego California Several outstanding papers and posters generated lively discussion and debate not only about scientific issues but also about policy and regulatory issues While developed countries are considering spending perhaps billions of dollars per year to reach concentrations of 10 micrograms per liter or less countries like Bangladesh India and China are trying to deal with much more severe epidemic scale arsenic problems with millions of dollars or less Like its predecessors in 1994 and 1995 The Third SEGHS International

Conference on Arsenic Exposure and Health Effects 1998 continued the theme of global impact of arsenic In addition two new countries with significant arsenic problems Inner Mongolia and Bangladesh were represented The Bangladesh problem could be larger than the one in West Bengal with a possible two thirds of the population at risk The conference also featured a session on mechanisms of cancer carcinogenesis Several scientists presented their work on this important issue which is central to considerations of such questions as the shape of the dose response curve at low doses This latter issue was featured in the final session of the conference Another session that was new and of great interest was on the treatment of victims of chronic arsenic poisoning This was the most dynamic conference to date and this resulting monograph represents the state of the art in arsenic research on a worldwide basis It will contribute to the solution of the many problems caused by arsenic exposure throughout the world
