Modeling Nature Episodes In The History Of Population Ecology:

Modeling Nature Sharon E. Kingsland, 1988 *Modelling Nature* Sharon E. Kingsland, 1988 Development Betrayed Richard B Norgaard, 2006-05-18 Modernity promised control over nature through science material abundance through technology and effective government through rational social organization Instead of leading to this promised land it has brought us to the brink of environmental and cultural disaster Why has there been this gap between modernity's aspirations and its achievements *Development Betrayed* offers a powerful answer to this question Development with its unshakeable commitment to the idea of progress is rooted in modernism and has been betrayed by each of its major tenets Attempts to control nature have led to the brink of environmental catastrophe Western technologies have proved inappropriate for the needs of the South and governments are unable to respond effectively to the crises that have resulted Offering a thorough and lively critique of the ideas behind development Richard Norgaard also offers an alternative co evolutionary paradigm in which development is portrayed as a co evolution between cultural and ecological systems Rather than a future with all peoples merging to one best way of knowing and doing things he envisions a future of a patchwork quilt of cultures with real possibilities for harmony **Populations, Biocommunities, Ecosystems** George P. Stamou, 2012 Discussions on historical and philosophical issues in ecology have been rather limited This volume presents an enriched and comprehensive review on ecological issues The topics covered in this e book include the emergence of the field of life history st Sources, Sinks and Sustainability Jianguo Liu, Vanessa Hull, Anita T. Morzillo, John A. Wiens, 2011-06-30 Source sink theories provide a simple yet powerful framework for understanding how the patterns processes and dynamics of ecological systems vary and interact over space and time Integrating multiple research fields including population biology and landscape ecology this book presents the latest advances in source sink theories methods and applications in the conservation and management of natural resources and biodiversity The interdisciplinary team of authors uses detailed case studies innovative field experiments and modeling and comprehensive syntheses to incorporate source sink ideas into research and management and explores how sustainability can be achieved in today's increasingly fragile human dominated ecosystems Providing a comprehensive picture of source sink research as well as tangible applications to real world conservation issues this book is ideal for graduate students researchers natural resource managers and policy makers *Envisioning Human Geographies* Paul Cloke, Philip Crang, Mark Goodwin, 2014-02-24 Bringing together many of the leading human geographers from around the English speaking world *Envisioning Human Geographies* offers a series of personal visions for the future of human geography The result is a vigorous and far sighted debate about what human geography could and should be concerned with in the twenty first century The individual contributors develop their arguments to address the shape and direction of human geographies with each chapter looking forward and envisioning an intellectual future for the subject The result is a set of powerful statements written around the themes of space nature enclosure political economy non representation post

colonialism feminism post structuralism computation morality spirituality activism The statements are tied via an introduction that discusses the ideological academic and aesthetic prompts that fire the human geographical imagination *Envisioning Human Geographies* maps out important new territories of enquiry for human geography and is essential reading for all students studying the nature and philosophy of the subject **Science and the Social Good** John P.

Herron,2010-02-04 Using biographies of three natural scientists geologist Clarence King forester Robert Marshall and biologist Rachel Carson *Science and the Social Good* investigates the links between nature s scientific study and social improvement **The Song Of The Dodo** David Quammen,2012-03-31 Why have island ecosystems always suffered such high rates of extinction In our age with all the world s landscapes from Tasmania to the Amazon to Yellowstone now being carved into island like fragments by human activity the implications of this question are more urgent than ever Over the past eight years David Quammen has followed the threads of island biogeography on a globe encircling journey of discovery

Bayesian Models N. Thompson Hobbs,Mevin B. Hooten,2025-06-03 A fully updated and expanded edition of the essential primer on Bayesian modeling for ecologists Uniquely suited to deal with complexity in a statistically coherent way Bayesian modeling has become an indispensable tool for ecological research This book teaches the basic principles of mathematics and statistics needed to apply Bayesian models to the analysis of ecological data using language non statisticians can understand Deemphasizing computer coding in favor of a clear treatment of model building it starts with a definition of probability and proceeds step by step through distribution theory likelihood simple Bayesian models and hierarchical Bayesian models Now revised and expanded *Bayesian Models* enables students and practitioners to gain new insights from ecological models and data properly tempered by uncertainty Covers the basic rules of probability needed to model diverse types of ecological data in the Bayesian framework Shows how to write proper mathematical expressions for posterior distributions using directed acyclic graphs as templates Explains how to use the powerful Markov chain Monte Carlo algorithm to find posterior distributions of model parameters latent states and missing data Teaches how to check models to assure they meet the assumptions of model based inference Demonstrates how to make inferences from single and multiple Bayesian models Provides worked problems for practicing and strengthening modeling skills Features new chapters on spatial models and modeling missing data *The Wizard and the Prophet* Charles Mann,2019-04-16 From the bestselling award winning author of *1491* and *1493* an incisive portrait of the two little known twentieth century scientists Norman Borlaug and William Vogt whose diametrically opposed views shaped our ideas about the environment laying the groundwork for how people in the twenty first century will choose to live in tomorrow s world In forty years Earth s population will reach ten billion Can our world support that What kind of world will it be Those answering these questions generally fall into two deeply divided groups Wizards and Prophets as Charles Mann calls them in this balanced authoritative nonpolemical new book *The Prophets* he explains follow William Vogt a founding environmentalist who believed that in using more than our

planet has to give our prosperity will lead us to ruin Cut back was his mantra Otherwise everyone will lose The Wizards are the heirs of Norman Borlaug whose research in effect wrangled the world in service to our species to produce modern high yield crops that then saved millions from starvation Innovate was Borlaug s cry Only in that way can everyone win Mann delves into these diverging viewpoints to assess the four great challenges humanity faces food water energy climate change grounding each in historical context and weighing the options for the future With our civilization on the line the author s insightful analysis is an essential addition to the urgent conversation about how our children will fare on an increasingly crowded Earth

Life Out of Balance Joel B. Hagen, 2021-04-13 Traces historical developments in scientific conceptions of physiology ecology behavior and evolutionary biology during the mid twentieth century Life Out of Balance focuses on a period in history when new ideas of self regulation adaptation and fitness became central to a variety of biological disciplines During the decades surrounding World War II these ideas developed in several quite different contexts and led to greater debates about the merits of such models as applied to larger systems including society at large Particularly in its later cybernetic form homeostasis seemed to provide new ways of discussing balance and regulation that avoided discredited approaches of earlier champions of vitalism and mechanism It provided a common perspective and terminology for discussing self regulating systems whether biological mechanical or social Although enormously fruitful and influential homeostatic perspectives also generated numerous controversies when critics questioned the degree to which biological systems are characterized by balance and self regulation Resolving these controversies continues to be a challenge in modern biology If natural selection constitutes the first law of biology scientists who champion homeostasis as a theoretical model claim that it is a second law equally important and closely related to the first Such claims notwithstanding homeostasis has generated a series of controversies since it was formalized by Walter Cannon in the late 1920s Critics contended that Cannon took a too optimistic view of life not only ignoring pathological deviations from normality but also failing to adequately explain the ability of living things to respond adaptively to environmental challenges Underlying these controversies was the unresolved problem of integrating physiology and other areas of functional biology with the emerging evolutionary synthesis of Mendelian genetics and Darwinian natural selection The physiological idea of homeostasis as the adaptive fit between the organism and its environment and the Darwinian idea of adaptation and fitness in terms of reproductive success might seem to be complementary in an unproblematic way but historically they have had an uneasy relationship

Resettling the Range John Thistle, 2015-02-25 The ranchers who resettled BC s interior in the late nineteenth and early twentieth centuries depended on grassland for their cattle but in this they faced some unlikely competition from grasshoppers and wild horses With the help of the government settlers resolved to rid the range of both Resettling the Range explores the ecology and history of the grassland and the people who lived there by looking closely at these eradication efforts In the claims of range improvement and rational land use author John Thistle uncovers more complicated stories of

marginalization the destruction of wild horses worked to dispossess aboriginal people while the campaign to exterminate grasshoppers exposed class conflicts and competing versions of resettlement among immigrant ranchers This unconventional history examines the lasting effects of range improvement revealing a fascinating and troubling chapter of BC history

American Tropics Megan Raby, 2017-10-03 Biodiversity has been a key concept in international conservation since the 1980s yet historians have paid little attention to its origins Uncovering its roots in tropical fieldwork and the southward expansion of U S empire at the turn of the twentieth century Megan Raby details how ecologists took advantage of growing U S landholdings in the circum Caribbean by establishing permanent field stations for long term basic tropical research From these outposts of U S science a growing community of American tropical biologists developed both the key scientific concepts and the values embedded in the modern discourse of biodiversity Considering U S biological fieldwork from the era of the Spanish American War through the anticolonial movements of the 1960s and 1970s this study combines the history of science environmental history and the history of U S Caribbean and Latin American relations In doing so Raby sheds new light on the origins of contemporary scientific and environmentalist thought and brings to the forefront a surprisingly neglected history of twentieth century U S science and empire

Ecological Understanding Steward T.A. Pickett, Jurek Kolasa, Clive G. Jones, 2013-10-22 Ecology is an historical science in which theories can be as difficult to test as they are to devise This volume intended for ecologists and evolutionary biologists reviews ecological theories and how they are generated evaluated and categorized Synthesizing a vast and sometimes labyrinthine literature this book is a useful entry into the scientific philosophy of ecology and natural history The need for integration of the contributions to theory made by different disciplines is a central theme of this book The authors demonstrate that only through such integration will advances in ecological theory be possible Ecologists evolutionary biologists and other serious students of natural history will want this book

Catastrophic Thinking David Sepkoski, 2020-09-24 A history of scientific ideas about extinction that explains why we learned to value diversity as a precious resource at the same time as we learned to think catastrophically about extinction We live in an age in which we are repeatedly reminded by scientists by the media by popular culture of the looming threat of mass extinction We are told that human activity is currently producing a sixth mass extinction perhaps of even greater magnitude than the five previous geological catastrophes that drastically altered life on Earth Indeed there is a very real concern that the human species may itself be poised to go the way of the dinosaurs victims of the most recent mass extinction some 65 million years ago How we interpret the causes and consequences of extinction and their ensuing moral imperatives is deeply embedded in the cultural values of any given historical moment And as David Sepkoski reveals the history of scientific ideas about extinction over the past two hundred years as both a past and a current process is implicated in major changes in the way Western society has approached biological and cultural diversity It seems self evident to most of us that diverse ecosystems and societies are intrinsically valuable but the current fascination with diversity is a relatively

recent phenomenon In fact the way we value diversity depends crucially on our sense that it is precarious that it is something actively threatened and that its loss could have profound consequences In *Catastrophic Thinking* Sepkoski uncovers how and why we learned to value diversity as a precious resource at the same time as we learned to think catastrophically about extinction

The World in the Model Mary S. Morgan,2012-09-17 During the last two centuries the way economic science is done has changed radically it has become a social science based on mathematical models in place of words This book describes and analyses that change both historically and philosophically using a series of case studies to illuminate the nature and the implications of these changes It is not a technical book it is written for the intelligent person who wants to understand how economics works from the inside out This book will be of interest to economists and science studies scholars historians sociologists and philosophers of science But it also aims at a wider readership in the public intellectual sphere building on the current interest in all things economic and on the recent failure of the so called economic model which has shaped our beliefs and the world we live in

To Make a Spotless Orange Richard C. Sawyer,2002-09 To Make A Spotless Orange is the story of science with a mission the use of organisms to attack pests Few states showed very little interest after the first commercial pesticides appeared in the late nineteenth century In california alone entomologists persevered in developing both the theory and practice of biological control These entomologists were neither environmentalists nor health crusaders but scientist s who believed that their method would be the cheapest and most effective in the long run

Biopolitics for beginners Ottavio Marzocca,2021-02-25T00:00:00+01:00 The term biopolitics can be fully understood only within the context of modern forms of governing society From this perspective the development of modern medical knowledge the re organization of the hospital as a health institution the growing attention to

issues related to population and the rise of biological knowledge can be connected with the influence of economic rationality on the most important political strategies. In this book, the crucial role that the family has played throughout the history of biopolitics is also explored, explaining how it is firstly a place of government of life as well as a means to extend various forms of biopower to the whole society. By analysing the works of key figures in the debate on biopolitics such as Agamben, Negri, Esposito, Rose, Cooper among others, this volume offers a systematic examination of this notion also in relation to the current ecological crisis and the pandemic of Covid 19, addressing fundamental problems of political thought and referring to great thinkers such as Foucault and Arendt, Plato and Aristotle. hydrogen production technologies from fossil fuels toward - Nov 27 2022

web this study reviews the different hydrogen production technologies available using fossil fuels or renewable resources such as biomass and water currently most hydrogen is produced from fossil fuels because production costs are correlated with fuel prices which remain at acceptable levels

production of hydrogen u s energy information administration - Dec 29 2022

web jun 23 2023 hydrogen production to produce hydrogen it must be separated from the other elements in the molecules where it occurs hydrogen can be produced from many different sources in different ways to use as a fuel the two most common methods for producing hydrogen are steam methane reforming and electrolysis splitting water

the future of hydrogen analysis iea international energy - Apr 01 2023

web dr fatih birol key findings supplying hydrogen to industrial users is now a major business around the world demand for hydrogen which has grown more than threefold since 1975 continues to rise almost entirely supplied from fossil fuels with 6 of global natural gas and 2 of global coal going to hydrogen production

hydrogen fuel energy uses britannica - Jul 24 2022

web hydrogen fuel energy uses the most important industrial method for the production of hydrogen is the catalytic steam hydrocarbon process in which gaseous or vaporized hydrocarbons are treated with steam at high pressure over a nickel catalyst at 650 950 c to produce carbon oxides and hydrogen $\text{cnh}_2\text{n}_2 \text{ nh}_2\text{o nco } 2\text{n}_1 \text{ h}_2$

web several hydrogen production methods are in development thermochemical water splitting high temperatures generated by solar concentrators or nuclear reactors drive chemical photobiological water splitting microbes such as green algae consume water in the presence of sunlight and produce

global hydrogen review 2022 analysis iea - Jan 30 2023

web about this report the global hydrogen review is an annual publication by the international energy agency that tracks hydrogen production and demand worldwide as well as progress in critical areas such as infrastructure development trade policy regulation investments and innovation

an overview of hydrogen production current status potential - May 02 2023

web may 15 2022 hydrogen production pathways via renewable and non renewable sources renewable energy sources gaining potential as clean energy source to produce h₂ plasmolysis is competitive to electrolysis for h₂ production plasmolysis is beneficial for its low power consumption and reduced equipment size

executive summary global hydrogen review 2022 analysis - Sep 25 2022

web hydrogen demand reached 94 million tonnes mt in 2021 recovering to above pre pandemic levels 91 mt in 2019 and containing energy equal to about 2.5% of global final energy consumption most of the increase came from traditional uses in refining and industry though demand for new applications grew to about 40 thousand tonnes up

hydrogen production wikipedia - Oct 07 2023

web hydrogen production is the family of industrial methods for generating hydrogen gas there are four main sources for the commercial production of hydrogen natural gas oil coal and electrolysis of water which account for 48 30 18 and 4% of the world's hydrogen production respectively 1

executive summary global hydrogen review 2021 analysis - Oct 27 2022

web a key barrier for low carbon hydrogen is the cost gap with hydrogen from unabated fossil fuels at present producing hydrogen from fossil fuels is the cheapest option in most parts of the world depending on regional gas prices the levelised cost of hydrogen production from natural gas ranges from usd 0.5 to usd 1.7 per kilogramme kg

hydrogen production storage utilisation and environmental - Feb 28 2023

web oct 6 2021 the former is the more mature and most common used industrially as it is a cost effective method that deploys cracking or reforming fossil based fuels in 2016 hydrogen production globally was about 85 million tonnes used in petroleum metal industry fertiliser food processing semiconductor production power plants and

a review on hydrogen production and utilization challenges and - Mar 20 2022
