the post war period housing markets were often mentioned as having a special responsibility The objective of this book is to shed light on the cyclical behaviour of the housing markets its fundamental determinants in terms of supply and demand characteristics and its relationship with the overall business cycle The co movements of house prices across countries are also considered as well as the channel of transmission of house price changes to the rest of the economy Particular attention is paid to the effects on private consumption through possible wealth effects The book is a compilation of original papers produced by economists and researchers from the four main national central banks in the euro area also with the participation of leading academics

Building Cycles Richard Barras, 2009-08-13 The global economic crisis of 2008 was precipitated by a housing market crash thus highlighting the destabilizing influence of the property cycle upon the wider economy This timely book by a world authority explores why cycles occur and how they affect the behaviour of real estate markets The central argument put forward is that growth and instability are inextricably linked and that building investment acts both as a key driver of growth and as the source of the most volatile cyclical fluctuations in an economy The role of building cycles in both economic growth and urban development is explored through a theoretical review and a comparative historical analysis of UK and US national data stretching back to the start of the nineteenth century together with a case study of the development of London since the start of the eighteenth century A simulation model of the building cycle is presented and tested using data for the City of London office market The analysis is then broadened to examine the operation of property cycles in global investment markets during the post war period focussing on their contribution to the diffusion of innovation the accumulation of wealth and the propagation of market instability Building Cycles growth instability concludes by synthesizing the main themes into a theoretical framework which can guide our understanding of the operation and impact of building cycles on the modern economy Postgraduate students on courses in property and in urban development as well as professional property researchers urban economists and planners will find this a stimulating read demanding but accessible

Monetary and Banking History Geoffrey Wood, Terence Mills, Nicholas Crafts, 2011-05-11 Forrest Capie is an eminent economic historian who has published extensively on a wide range of topics with an emphasis on banking and monetary history particularly in the nineteenth and twentieth centuries but also in other areas such as tariffs and the interwar economy He is a former editor of the *Economic History Review* one of the leading academic journals in this discipline Under the steely editorship of Geoffrey Wood this book brings together a stellar line of contributors including Charles Goodhart Harold James Michael Bordo Barry Eichengreen Charles Calomiris and Anna Schwartz The book analyzes many of the mainstream themes in economic and financial history monetary policy international financial regulation economic performance exchange rate systems international trade banking and financial markets where historical perspectives are considered important The current wave of globalisation has stimulated interest in many of these areas as lessons of history are sought These themes also reflect the breadth of Capie's work in terms of time periods and topics

History of Market Performance R.J. Van der Spek, Jan Luiten van Zanden, Bas van Leeuwen, 2014-09-04 This exciting new volume examines the development of market performance from Antiquity until the dawn of the Industrial Revolution. Efficient market structures are agreed by most economists to serve as evidence of economic prosperity and to be prerequisites for further economic growth. However, this is the first study to examine market performance as a whole over such a large time period. Presenting a hitherto unknown and inaccessible corpus of data from ancient Babylonia, this international set of contributors are for the first time able to offer an in-depth study of market performance over a period of 2,500 years. The contributions focus on the market of staple crops as they were crucial goods in these societies. Over this entire period, all papers provide a similar conceptual and methodological framework resting on a common definition of market performance combined with qualitative and quantitative analyses resting on new and improved price data. In this way, the book is able to combine analysis of the Babylonian period with similar work on the Roman, Early and Late Medieval, and Early Modern period. Bringing together input from Assyriologists, ancient historians, economic historians, and economists, this volume will be crucial reading for all those with an interest in ancient history, economic history, and economics.

Econometric Business Cycle Research Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research. EBCR, a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories, EBCR combines economic theory and measurement in the study of business cycles, i.e. ups and downs in overall economic activity. We assess four methods of EBCR: business cycle indicators, simultaneous equations models, vector autoregressive systems, and real business indicators. After a sketch of the history of the methods, we investigate whether the methods meet the goals of EBCR: the three traditional ones, description, forecasting, and policy evaluation, and the one Tinbergen introduced, the implementation testing of business cycles. The first three EBCR methods are illustrated for the Netherlands, a typical example of a small open economy. The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously. This conclusion is based on a fairly detailed assessment of the methods and is not overturned in the empirical illustrations. The main conclusion does not imply the end of other EBCR methods. Not all goals have to be met with a single vehicle; other methods might serve the purpose equally well or even better. For example, if one is interested in business cycle forecasts, one might prefer a business cycle indicator or vector autoregressive system. A second conclusion is that many ideas/concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s. A third conclusion is that it is difficult, if not impossible, to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation-per-observation basis. A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable.

Essays in Honour of Fabio Canova Juan J. Dolado, Luca Gambetti, Christian

Matthes,2022-09-21 Both parts of Volume 44 of *Advances in Econometrics* pay tribute to Fabio Canova for his major contributions to economics over the last four decades *System-Theoretic Methods in Economic Modelling I* S.

Mitnik,2014-06-28 The value of applying system theoretic concepts to economic modelling problems arises from the fact that it offers a unifying framework for modelling dynamic systems In addition to offering this powerful conceptual framework it provides a wide range of tools useful in applied work System theoretic techniques enter predominantly two stages of economic modelling efforts the stage of model construction and the stage of model application in accordance with the modelling The objective of this and subsequent volumes on *System Theoretic Methods in Economic Modelling I* is to initiate and or intensify dialogues between researchers and practitioners within and across the disciplines involved This first volume brings together papers exhibiting a wide range of system theoretic techniques and applications to economic problems The papers have been divided into two groups following roughly but not necessarily the above classification into the construction and application stages of economic modelling The papers in the first group focus on the identification of dynamic and static systems while the papers in the second group address dynamic optimization problems *Journal of Economic Literature*,2003 *The Long-term Behavior of Commodity Prices* Pier Giorgio Ardeni,Brian Wright,1990 The long term net barter

terms of trade between primary commodities and manufactures has been declining 0.6 percent a year *Modelling Macroeconomic Adjustment with Growth in Developing Economies* Sushanta K. Mallick,2018-08-13 First published in 1999 this influential volume explores Macroeconomic Adjustment with a particular focus on India Its inspiration originated from the introduction of stabilisation and structural adjustment policies in India in 1991 Mallick examines the application of this policy package by the International Monetary Fund and the World Bank to Developing Economies First looking at the initial conditions and generators of imbalances the appropriate policy framework for India's initial conditions and structural characteristics is considered While the effectiveness of the IMF had been strongly criticised Mallick explains how it could be used more effectively He argues that the programs applied are often contradictory and using India as an example examines the effects of policy reform on its trade sector the repercussions on the direct economy and the costs associated with such policies in restoring stability and future economic growth with particular support for the Vector Autoregression VAR framework Mallick forwards a new structural model for policy purposes evaluated for overall performance and optimal control
