Advanced Methods for Modeling Markets Peter S. H. Leeflang, Jaap E. Wieringa, Tammo H.A Bijmolt, Koen H. Pauwels, 2017-08-29 This volume presents advanced techniques to modeling markets with a wide spectrum of topics including advanced individual demand models time series analysis state space models spatial models structural models mediation models that specify competition and diffusion models It is intended as a follow on and companion to *Modeling Markets 2015* in which the authors presented the basics of modeling markets along the classical steps of the model building process specification data collection estimation validation and implementation This volume builds on the concepts presented in *Modeling Markets* with an emphasis on advanced methods that are used to specify estimate and validate marketing models including structural equation models partial least squares mixture models and hidden Markov models as well as generalized methods of moments Bayesian analysis non semi parametric estimation and endogeneity issues Specific attention is given to big data The market environment is changing rapidly and constantly Models that provide information about the sensitivity of market behavior to marketing activities such as advertising pricing promotions and distribution are now routinely used by managers for the identification of changes in marketing programs that can improve brand performance In today's environment of information overload the challenge is to make sense of the data that is being provided globally in real time from thousands of sources Although marketing models are now widely accepted the quality of the marketing decisions is critically dependent upon the quality of the models on which those decisions are based This volume provides an authoritative and comprehensive review with each chapter including an introduction to the method methodology a numerical example application in marketing references to other marketing applications suggestions about software Featuring contributions from top authors in the field this volume will explore current and future aspects of modeling markets providing relevant and timely research and techniques to scientists researchers students academics and practitioners in marketing management and economics

and techniques in the field *Modeling Indoor Air Pollution* Darrell W. Pepper, 2009 Emission of pollutants and their accumulation due to poor ventilation and air exchange are serious problems currently under investigation by many researchers Of particular concern are issues involving air quality within buildings Toxic fumes and airborne diseases are known to produce undesirable odors eye and nose irritations sickness and occasionally death Other products such as tobacco smoke and carbon monoxide can also have serious health effects on people exposed to a poorly ventilated environment studies indicate that indirect or passive smoking can also lead to lung cancer Design for prevention or remediation of indoor air pollution requires expertise in optimizing geometrical configurations knowledge of HVAC systems perceived or expected contaminants and source locations and economics Much of the design concept involves ways in which to optimize the benefits or balance the advantages and disadvantages of various configurations and equipment The fact that a room or building will conceivably become contaminated is generally an accepted fact OCo to what extent indoor air pollution will become critical is not really known until it happens A series of numerical models that run in MATLAB are described in the text and placed on the Web These models include the finite difference method finite volume method finite element method the boundary element method particle in cell meshless methods and lagrangian particle transport In addition all example problems can be run using COMSOL a commercial finite element based computer code with a great deal of flexibility and application By accessing AutoCad ICES or DWG file structures COMSOL permits a building floor plan to be captured and the interior walls discretized into elements *Imaging-Based Methods for Fracture Risk Assessment* Egon Burian, Nico Sollmann, Julio Carballido-Gamio, 2025-09-19 Osteoporosis is a highly prevalent skeletal disease with fragility fractures being a major complication Approximately 200 million people worldwide suffer from osteoporosis with its prevalence expected to increase in the coming decades due to the aging population particularly in the Western world It is estimated that around 40% of women with osteoporosis and around 15 to 30% of men with osteoporosis suffer from fragility fractures during their lifetime making osteoporosis a significant public health concern These fractures are associated with reduced quality of life accelerated morbidity and premature mortality This research topic aims to cover the different diagnostic techniques for imaging and quantification of bone mineral density and bone structure in general To achieve this we will collect manuscripts covering topics from imaging to fracture risk assessment in the context of osteopenia osteoporosis Within this special collection original articles and review articles in the area of quantitative imaging artificial intelligence augmented imaging and bone mineral density are particularly welcome *Modelling and Simulations for Tourism and Hospitality* Jacopo A.
