European Social Models from Crisis to Crisis Jon Erik Dølvik,Andrew Martin,2015 This book analyzes the interaction of European social models the institutions structuring labor markets supply side and their turbulent macroeconomic environment from the deep Europe wide recession ending Germanys post unification boom through monetary union s establishment to the Great Recession following the recent financial crisis The analysis reaches two conclusions challenging the dominant view that the social models caused unemployment by impairing labor markets efficiency in the name of equity First the social models employment and distributive effects are far outweighed by their macroeconomic environment especially in the Eurozone where its truncated structure of economic governance transformed the Great Recession into a sovereign debt crisis Second instead of a trade off between efficiency and equity the employment effects of counteracting

markets tendency to generate inequality depends on the macroeconomic conditions under which it occurs and how it is done

Econometric Business Cycle Research Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i e ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not over turned in the empirical illustrations The main conclusion does not imply

the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable

Changing Models of Capitalism in Europe and the U.S. Richard Deeg,Gregory Jackson,2016-04-14 The volume analyzes the long term trajectories of change in the capitalist models of the UK Germany Sweden France Italy Hungary Slovakia and the United States The case studies identify critical junctures and key periods of change in order to show how institutions are shaped by different sets of socio political compromises and public policy The case studies follow a common methodology comparing change and linkages across six core institutional domains thus facilitating a comparative understanding of the patterns and drivers of institutional change as well as how liberalisation impacts countries in similar and dissimilar ways The historical perspective of the cases highlights the transformative effects of relatively slow and incremental changes These case studies also make an innovative contribution to examining the linkages between four levels of institutions that regulate the economy the international macro national meso and micro The volume reveals both a common trend toward more liberal forms of capitalism but also variations on this overarching trajectory Markets themselves create their own dynamics which have varied effects on firms and other economic actors in historically diverse institutional contexts This book was originally published as a special issue of the Journal of European Public Policy

Alternative Political Economy Models of Transition John Marangos, 2017-07-05 The collapse of centrally administered socialism in Russia and Eastern Europe resulted in what is commonly referred to as the transition problem the transformation from a centrally administered socialist economic system to one that is market based Economic science has been faced with the challenge of developing an appropriate body of analysis advice and direction to help other nations that may be undergoing this process In this volume John Marangos adopts a political economy approach that yields alternative models of transition The volume develops transition models from what Marangos defines as the primary elements of six variables 1 economic analysis 2 definitions of the Good Society 3 speed of transition 4 political structure 5 ideological structure and 6 initial conditions The models developed include the shock therapy model the neoclassical gradualist model of transition the post Keynesian model the pluralistic market the socialist model and the non pluralistic market socialist model After identifying the primary elements of each transition model Marangos considers the elements of each model with respect to the desirable reforms An essential element of the transition process is not only to identify the necessary reforms but also a sequence in which the reforms should be introduced For each transition model developed in this book a set of primary and secondary elements were provided in conjunction with a sequence of reforms Analyzing the transition problem from a political economy perspective Marangos shows that it is possible to have inconsistencies within each transition model and between transition models yet be able to identify the potential for implementation and maintenance of necessary reforms each model recommends This volume contributes to the understanding of the process of transition with the objective of identifying an optimal model of transition

Theory of Social Democracy Thomas Meyer,Lewis Hinchman,2007-09-24 The ascendancy of neo liberalism in different parts of the world has put social democracy on the defensive Its adherents lack a clear rationale for their policies Yet a justification for social democracy is implicit in the United Nations Covenants on Human Rights ratified by most of the worlds

countries The covenants commit all nations to guarantee that their citizens shall enjoy the traditional formal rights but they likewise pledge governments to make those rights meaningful in the real world by providing social security and cultural recognition to every person This new book provides a systematic defence of social democracy for our contemporary global age The authors argue that the claims to legitimation implicit in democratic theory can be honored only by social democracy libertarian democracies are defective in failing to protect their citizens adequately against social economic and environmental risks that only collective action can obviate Ultimately social democracy provides both a fairer and more stable social order But can social democracy survive in a world characterized by pervasive processes of globalization This book asserts that globalization need not undermine social democracy if it is harnessed by international associations and leavened by principles of cultural respect toleration and enlightenment The structures of social democracy must in short be adapted to the exigencies of globalization as has already occurred in countries with the most successful social democratic practices

Surviving Globalization? Stefan Beck, Frank Klobes, Christoph Scherrer, 2005-04-04 society and state Streeck 1999 Simonis 1998 Interspersed between these most commonly named elements are the following First the high political integrating force of the German Model after WWII was based on the adoption and transformation of corporatist political structures from National Socialist Germany Liberal capitalism was re introduced under political competition between Christian Democrats and Social Democrats who eventually found common ground in the politically mediated compromise between capital and labor This compromise was negotiated and institutionalized at a time when the communist wing of the workers movement and the authoritarian voices of German capital for various reasons were excluded from political participation Streeck 1999 p 15 translation SB The partnership between firms and unions manifested itself in manifold institutional structures Apart from the social partners autonomy in matters of wage policy worker codetermination at plant level and in operations is regarded as one of the special achievements of the German Model and has contributed substantially to social peace The political coordination forms of concerted action round tables as well as modernization and crisis cartels gave birth to a highly complex political decision making structure which based on a federalist setup has rightly been called negotiation state Esser 1998 p 123 Second the material foundation of this Social Democratic class compromise Buci Glucksmann Therborn 1981 consisted in the Federal Republic s in the words of G ste Esping Andersen conservative liberal form of welfare state
