**Prepositions and Complement Clauses** Juhani Rudanko, 1996-02-15 This book provides a pioneering and data oriented investigation of the syntax and semantics of important prepositional complementation patterns dependent on the prepositions in to at on with and of in current English The investigation is based on a sample of matrix verbs that governs the pattern of sentential complementation The data includes the Brown and LOB corpora English dictionaries and grammars and the intuitions of native speakers Rudanko sets up taxonomies of matrix verbs and argues that they often can be based on relatively few core classes He questions whether verbs selecting a pattern also select other patterns of sentential complementation Noting the quantity and quality of such alternation he observes how differences in form are linked to differences in meaning The study of relevant matrix verbs supplemented with discussion of alternation and other syntactic and semantic properties of the patterns points to the semantic functions that are associated typically with each pattern of complementation A modern English grammar: with an appendix on semantically related prepositions. Knud Schibsbye, 1970 *Grammatical Number in English Nouns* Mark A. Wickens, 1992-03-12 Apart from the coverage given to it in the grammars number in English nouns has received relatively little attention especially in the area of theoretical considerations Guided by the principles of psychomechanics Hirtle 1982a put forth a fairly elaborate theory of number in English nouns The aim of this work is to provide evidence to validate parts of Hirtle's theory to verify some of his analyses and to investigate several problems some of which are mentioned in his work as subjects for further research Specific areas treated are ailment nouns liquid names ending in ings binary objects abstract s and external singulars *The Grammar of Names* John M. Anderson, 2007-01-04 This book is the first systematic account of the syntax and semantics of names Drawing on work in onomastics philosophy and linguistics John Anderson examines the distribution and subcategorization of names within a framework of syntactic categories and considers how the morphosyntactic behaviour of names connects to their semantic roles He argues that names occur in two basic circumstances one involving vocatives and their use in naming predications where they are not definite the other their use as arguments of predicators where they are definite This division is discussed in relation to English French Greek and Seri and a range of other languages Professor Anderson reveals that the semantic status of names including prototypicality is crucial to understanding their morphosyntax and role in derivational relationships He shows that semantically coherent subsets of names such as those referring to people and places are characterized by morphosyntactic properties which may vary from language to language His original and important investigation will appeal to scholars and advanced students of linguistics and philosophy **English for**
