The Lake Charr *Salvelinus namaycush*: Biology, Ecology, Distribution, and Management Andrew M. Muir, Charles C. Krueger, Michael J. Hansen, Stephen C. Riley, 2021-03-03 The lake charr *Salvelinus namaycush* is a ubiquitous member of cold water lake ecosystems in previously glaciated regions of northern continental U S Alaska and Canada that often support important commercial recreational and subsistence fisheries The lake charr differs from other charrs by its large size longevity iteroparity top predator specialization reduced sexual dimorphism prevalence of lacustrine spawning and use of deepwater habitat The species is remarkably variable in phenotype physiology and life history some of which is reflected in its ecology and genetics with as many as four morphs or ecotypes co occurring in a single lake The lake charr is often the top predator in these systems but is highly adaptable trophically and is frequently planktivorous in small lakes The lake charr by their name highlights their common habitat lakes both large and small but often frequents rivers and occasionally moves into the Arctic Ocean Movement and behaviour of lake charr are motivated by access to cool well oxygenated water foraging opportunities predator avoidance and reproduction Owing to their broad distribution and trophic level the lake charr serves as a sentinel of anthropogenic change This volume will provide an up to date summary of what is currently known about lake charr from distribution to genetics to physiology to ecology The book provides a compilation and synthesis of available information on the lake charr beginning with an updated distribution and a revised treatment of the paleoecology of the species Understanding of ecological and genetic diversity and movement and behaviour of the species has advanced remarkably since the last major synthesis on the species over 40 years ago Mid sections of the book provide detailed accounts of the biology and life history of the species and later sections are devoted to threats to conservation and fishery management practices used to ensure sustainability A new standard lake charr specific terminology is also presented The book will be a valuable reference text for biologists around the world ecologists and fishery managers and of interest to the angling public

Geomorphology Mateo Gutierrez, 2012-12-07 This book provides a detailed coverage of the landforms of Planet Earth and the processes that shaped them The study of these morphologies some of which formed during past

geological periods under environmental conditions very different from those of today makes it possible to reconstruct the evolution of relief and to infer environmental changes that have involved geological media the climate or human activity A major advance of Geomorphology in recent decades is the development of techniques that make it possible to quantify morphogenetic processes and rates at which forms change under different environmental conditions The development of Geochronology or absolute dating methods is helping us correct the limitations of relative dating that have prevailed in Geomorphology for many years The ability to assign numerical ages to both landforms and deposits opens up multiple possibilities for reconstructing the evolution of relief making correlations calculating rates and estimating recurrence periods A theme of major concern facing people today is the possible warming of the planet due to the release of greenhouse gases into the environment Investigations conducted by the scientific community show that this temperature increase is at least partially anthropogenic Given this more than probable cause and effect relationship the most sensible and prudent path is to design and apply mitigation measures to alleviate this heating that can negatively affect both the natural environment and human society The information that Geomorphology can provide on the recent past Historical Geomorphology may be very useful in making predictions on the activity of these potentially dangerous processes in the future and on the possible effects of environmental changes The aim of this book is to provide a general vision of the multiple aspects of Geomorphology and to provide a methodological foundation to approach the study of various branches of geomorphology To this end the book contains a basic bibliography that can be used for future research In addition applied aspects of Geomorphology are covered at the end of each chapter to provide knowledge of the activities of geomorphologists in the professional world
