Process Theories Crossdisciplinary Studies In Dynamic Categories:

Process Theories Johanna Seibt, 2011-06-27 Processes constitute the world of human experience from nature to cognition to social reality Yet our philosophical and scientific theories of nature and experience have traditionally prioritized concepts for static objects and structures The essays collected here call for a review of the role of dynamic categories in the language of theories They present old and new descriptive tools for the modelling of dynamic domains and argue for the merits of process based explanations in ontology cognitive science semiotics linguistics philosophy of mind robotics theoretical biology music theory and philosophy of chemistry and physics The collection is of interest to professional researchers in any of these fields it establishes for the very first time crossdisciplinary contact among recent process based research movements and might witness a conceptual paradigm shift in the making *Dynamic Being* Aljoscha Berve, Adam C. Scarfe, 2015-09-10 One of the most important characteristics of present day ontological research is the growing interest in and emphasis on the dynamic aspects of being and the process relational character of being itself However many important questions still await detailed answers For example what is the meaning of the concepts of dynamics dynamicity and dynamic ontology among others Are they identical to or similar with respectively processes process ontology process relational ontology Is process ontology a type of dynamic ontology *Dynamic Being Essays in Process Relational Ontology* examines these and many other questions and suggests fruitful approaches in dealing with such questions The book carries out two main tasks first investigating developments in the theory of dynamic and process relational ontologies and second exploring developments in the application of these ontologies The second task is multidisciplinary in character The authors of the chapters in this volume are specialists not only in philosophy but also in other fields of science including psychology biology mathematics logic and computer science their work providing a seed bed of novel possibilities for cooperative interdisciplinary research , *Ontological Landscapes* Vesselin Petrov, 2013-05-02 In the last decades ontology has been successfully developed in many directions and has fostered various approaches for depicting the contemporary ontological landscapes An important task is to outline recent thought on the conceptual interfaces between science and philosophy The present volume opens up a view onto the plurality of different ontological schemes The papers collected here discuss the interfaces between ontology and empirical research that are created by the notions of a whole a thought a number a quality an ability a kind notions of causation dynamicity and social objects the application of relevant logical tools for the reconsideration of ontological paradigms as well as the investigation of the consequences in cognitive sciences on the development of ontology *Structural-functional Studies in English Grammar* Michael Hannay, Gerard Steen, 2007-01-01 This collection presents a number of studies in the lexico grammar of English which focus on the one hand on close reading of language in context and on the other hand on current functional theoretical concerns The various contributions represent distinct functionalist models of language including Functional Grammar and Functional Discourse Grammar Systemic

Functional Grammar Role and Reference Grammar Cognitive Grammar and Construction Grammar Taken together however they typify current work being conducted from the grammatical perspective within the functionalist enterprise emphasizing on the relation between structure and usage A fundamental goal of the enterprise is to identify linguistic structures which are constrained by specific features of use or which actually encode specific features of use as many of the contributions here show

Philosophy of Complex Systems , 2011-05-23 The domain of nonlinear dynamical systems and its mathematical underpinnings has been developing exponentially for a century the last 35 years seeing an outpouring of new ideas and applications and a concomitant confluence with ideas of complex systems and their applications from irreversible thermodynamics A few examples are in meteorology ecological dynamics and social and economic dynamics These new ideas have profound implications for our understanding and practice in domains involving complexity predictability and determinism equilibrium control planning individuality responsibility and so on Our intention is to draw together in this volume we believe for the first time a comprehensive picture of the manifold philosophically interesting impacts of recent developments in understanding nonlinear systems and the unique aspects of their complexity The book will focus specifically on the philosophical concepts principles judgments and problems distinctly raised by work in the domain of complex nonlinear dynamical systems especially in recent years Comprehensive coverage of all main theories in the philosophy of Complex Systems Clearly written expositions of fundamental ideas and concepts Definitive discussions by leading researchers in the field Summaries of leading edge research in related fields are also included

Ontology Makes Sense S. Borgo, R. Ferrario, C. Masolo, 2019-04-05 Nicola Guarino is widely recognized as one of the founders of applied ontology His deep interest in the subtlest details of theoretical analysis and his vision of ontology as the Rosetta Stone for semantic interoperability guided the development and understanding of this domain His motivations in research stem from the conviction that all science must be for the benefit of society at large and his motto has always been that ontologies are not just for making information systems interoperable but more importantly for ensuring that systems users understand each other He was among the first to recognize that applied ontology must be an interdisciplinary enterprise if it is to capture the intended meaning of the terms used by an information system This book is a collection of essays written in homage to Nicola Guarino a tribute to his many scientific contributions to the discipline of applied ontology The papers presented here reflect the wide variety of research topics that marked Nicola's impact on the applied ontology community They are grouped according to the five general areas addressed by Nicola in his career what is an ontology knowledge engineering ontologies

and language ontological categories and relationships and ontologies and applications Nicola Guarino's work and dedication will undoubtedly continue to influence the applied ontology community and this book will be of interest to the many researchers aiming to establish ontologically sound bases for their research areas *Dualism, Platonism and Voluntarism* Sean O'Nuallain, 2016-05-11 The Foundations of Mind conference proceedings brings together a host of contemporary thinkers in the area from Ed Vul and Robert Campbell on the cognitive side through Stuart Kauffman to Henry Stapp and Walter Freeman for a wide ranging yet incisive debate This volume contains new papers from Stuart Kauffman Jacob Needleman and Sean Nuallain **Towards a Semiotic Biology** Kalevi Kull, 2011 This book presents programmatic texts on biosemiotics written collectively by world leading scholars in the field Deacon Emmeche Favareau Hoffmeyer Kull Markos Pattee Stjernfelt In addition the book includes chapters which focus closely on semiotic case studies Bruni Kotov Maran Neuman Turovski According to the central thesis of biosemiotics sign processes characterise all living systems and the very nature of life and their diverse phenomena can be best explained via the dynamics and typology of sign relations The authors are therefore presenting a deeper view on biological evolution intentionality of organisms the role of communication in the living world and the nature of sign systems all topics which are described in this volume This has important consequences on the methodology and epistemology of biology and study of life phenomena in general which the authors aim to help the reader better understand *The Routledge Companion to Philosophy of Psychology* Sarah Robins, John Symons, Paco Calvo, 2019-10-08 The Routledge Companion to Philosophy of Psychology Second Edition is an invaluable guide and major reference source to the key topics problems concepts and debates in philosophy of psychology and is the first companion of its kind A team of renowned international contributors provide forty eight chapters organized into six clear parts Historical background to philosophy of psychology Psychological explanation Cognition and representation The biological basis of psychology Perceptual experience Personhood The Companion covers key topics such as the origins of experimental psychology folk psychology behaviorism and functionalism philosophy psychology and neuroscience the language of thought modularity nativism and representational theories of mind consciousness and the senses dreams emotion and temporality personal identity and the philosophy of psychopathology For the second edition six new chapters have been added to address the following important topics belief and representation in nonhuman animals prediction error minimization contemporary neuroscience plant neurobiology epistemic judgment and group cognition Essential reading for all students of philosophy of mind science and psychology The Routledge Companion to Philosophy of Psychology will also be of interest to anyone studying psychology and its related disciplines **Glossary of Morphology** Federico Vercellone, Salvatore Tedesco, 2020-12-01 This book is a significant novelty in the scientific and editorial landscape Morphology is both an ancient and a new discipline that rests on Goethe's heritage and re-forms it in the present through the concepts of form and image The latter are to be understood as structural elements of a new cultural grammar able to make the late modern world

intelligible In particular compared to the original Goethean project but also to C P Snow s idea of unifying the two cultures the fields of morphological culture that are the object of this glossary have profoundly changed The ever increasing importance of the image as a polysemic form has made the two concepts absolutely transitive so to speak This is concomitant with the emergence of a culture that revolves around the image attracting the verbal logos into its orbit Incidentally even the hermeneutic relationship between past and present relies more and more on the image causing deep changes in cultural environments Form and image are not just bridging concepts as in the field of ancient morphology but real transitive concepts that define the state of a culture From the Internet to smartphones television advertising etc we are witnessing as Horst Bredekamp observes an immense mass of images that fill our time and affect the most diverse areas of our culture The ancient connection between science and art recalled by Goethe emerges with unusual evidence thanks to intersecting patterns and expressive forms that are sometimes shared by different forms of knowledge Creating a glossary and a culture of these intersections is the task of morphology which thus enters into the boundaries between aesthetics art design advertising and sciences from mathematics to computer science to physics and to biology in order to provide the founding elements of a grammar and a syntax of the image The latter in its formal quality both expressive and symbolic is a fundamental element in the unification of the various kinds of knowledge which in turn come to be configured in this regard also as styles of vision The glossary is subdivided into contiguous sections within a complex framework of cross references In addition to the two curators the book features the collaboration of a team of scholars from the individual disciplines appearing in the glossary

Contemporary Natural Philosophy and Philosophies - Part 1 Gordana Dodig-Crnkovic, Marcin J. Schroeder, 2019-06-11

Modern information communication technology eradicates barriers of geographic distances making the world globally interdependent but this spatial globalization has not eliminated cultural fragmentation The Two Cultures of C P Snow that of science technology and that of humanities are drifting apart even faster than before and they themselves crumble into increasingly specialized domains Disintegrated knowledge has become subservient to the competition in technological and economic race leading in the direction chosen not by the reason intellect and shared value based judgement but rather by the whims of autocratic leaders or fashion controlled by marketers for the purposes of political or economic dominance If we want to restore the authority of our best available knowledge and democratic values in guiding humanity first we have to reintegrate scattered domains of human knowledge and values and offer an evolving and diverse vision of common reality unified by sound methodology This collection of articles responds to the call from the journal *Philosophies* to build a new networked world of knowledge with domain specialists from different disciplines interacting and connecting with other knowledge and values producing and knowledge and values consuming communities in an inclusive extended contemporary natural philosophic manner In this process of synthesis scientific and philosophical investigations enrich each other with sciences informing philosophies about the best current knowledge of the world both natural and

human made while philosophies scrutinize the ontological epistemological and methodological foundations of sciences providing scientists with questions and conceptual analyses This is all directed at extending and deepening our existing comprehension of the world including ourselves both as humans and as societies and humankind The Routledge Handbook of Semiosis and the Brain Adolfo M. García, Agustín Ibáñez, 2022-11-14 This Handbook introduces neurosemiotics a pluralistic framework to reconsider semiosis as an emergent phenomenon at the interface of biology and culture Across individual and interpersonal settings meaning is influenced by external and internal processes bridging phenomenological and biological dimensions Yet each of these dyads has been segregated into discipline specific topics with attempts to chart their intersections proving preliminary at best Bringing together perspectives from world leading experts this volume seeks to overcome these disciplinary divides between the social and the natural sciences at both the empirical and theoretical levels Its various chapters chart the foundations of neurosemiotics characterize linguistic and interpersonal dynamics as shaped by neurocognitive bodily situational and societal factors and examine other daily neurosemiotic occurrences driven by faces music tools and even visceral signals This comprehensive volume is a state of the art resource for students and researchers interested in how humans and other animals construe experience in such fields as cognitive neuroscience biosemiotics philosophy of mind neuropsychology neurolinguistics and evolutionary biology *Deleuze and the Immanent Sublime* Louis Schreel, 2024-06-13 What becomes of the sublime today in a philosophy that discards the old oppositions between body and mind and embeds human reason in the creative evolution of life In this book Louis Schreel shows how Gilles Deleuze's life long engagement with the Kantian sublime grappled with just this question Its core argument centres on Deleuze's understanding of the sublime in terms of psychic individuation a creative self organizing process that animates cognitive systems from within Exploring Deleuze's transcendental philosophy through central concepts of self organization psychic individuation passibility and infinity this book shows how a new notion of the sublime emerges in a timely and novel way In this way Deleuze and the Immanent Sublime opens up an innovative perspective on transcendental philosophy shedding new light on Deleuze's transcendental empiricism both in relation to Kant and to contemporary cognitive science Engagement with previously untranslated writings from thinkers including Jean Petitot Gilbert Simondon Henri Maldiney and Erwin Straus adds further breadth to the development of Deleuze's ideas on the sublime in this systematic study

Diagrammatology Frederik Stjernfelt, 2007-06-20 Diagrammatology investigates the role of diagrams for thought and knowledge Based on the general doctrine of diagrams in Charles Peirce's mature work Diagrammatology claims diagrams to constitute a centerpiece of epistemology This book reflects Peirce's work on the issue in Husserl's contemporaneous doctrine of categorical intuition and charts the many unnoticed similarities between Peircean semiotics and early Husserlian phenomenology The Concept of Motion in Ancient Greek Thought Barbara M. Sattler, 2020-10-08 This book examines the birth of the scientific understanding of motion It investigates which logical tools and methodological principles had to be in

place to give a consistent account of motion and which mathematical notions were introduced to gain control over conceptual problems of motion It shows how the idea of motion raised two fundamental problems in the 5th and 4th century BCE bringing together being and non being and bringing together time and space The first problem leads to the exclusion of motion from the realm of rational investigation in Parmenides the second to Zeno's paradoxes of motion Methodological and logical developments reacting to these puzzles are shown to be present implicitly in the atomists and explicitly in Plato who also employs mathematical structures to make motion intelligible With Aristotle we finally see the first outline of the fundamental framework with which we conceptualise motion today **Beyond Liminality** Jack David Eller, 2024-07-08

Beyond Liminality Ontologies of Abundant Betweenness examines the concept of liminality in the social sciences and humanities and advocates for a more critical use of the concept while offering more precise alternatives Originally conceived in response to the near universal ritualization of changes of status i.e. rites of passage liminality was a welcome and much needed correction to the reigning static and structural models of culture at the time However it soon escaped its initial realm and was enthusiastically and mostly uncritically absorbed by many if not all scholarly disciplines The very success of the concept suggests that there is something about it that resonates with our own cultural sentiments However the assumptions that underlie diagnoses of liminality are seldom noted and even more seldom analyzed and critiqued This book examines the history of the concept its evolution and its current status and asks whether liminality accurately reflects lived realities which might better be described by fluidity hybridity multiplicity constant motion and recombination and abundant betweenness **Beyond Liminality** Ontologies of Abundant Betweenness is key reading for scholars and students across the social sciences and humanities interested in ritual performance identity formation rights ontology and epistemology **Sociality and Normativity for Robots** Raul Hakli, Johanna Seibt, 2017-05-30 This volume offers eleven philosophical investigations into our future relations with social robots robots that are specially designed to engage and connect with human beings The contributors present cutting edge research that examines whether and on which terms robots can become members of human societies Can our relations to robots be said to be social Can robots enter into normative relationships with human beings How will human social relations change when we interact with robots at work and at home The authors of this volume explore these questions from the perspective of philosophy cognitive science psychology and robotics The first three chapters offer a taxonomy for the classification of simulated social interactions investigate whether human social interactions with robots can be genuine and discuss the significance of social relations for the formation of human individuality Subsequent chapters clarify whether robots could be said to actually follow social norms whether they could live up to the social meaning of care in caregiving professions and how we will need to program robots so that they can negotiate the conventions of human social space and collaborate with humans Can we perform joint actions with robots where both sides need to honour commitments and how will such new commitments and practices change our regional cultures The authors connect research

in social robotics and empirical studies in Human Robot Interaction to recent debates in social ontology social cognition as well as ethics and philosophy of technology The book is a response to the challenge that social robotics presents for our traditional conceptions of social interaction which presuppose such essential capacities as consciousness intentionality agency and normative understanding The authors develop insightful answers along new interdisciplinary pathways in robophilosophy a new research area that will help us to shape the robot revolution the distinctive technological change of the beginning 21st century
