Production Process And Technical Change:

Production Process and Technical Change Mario Morroni, 2009-09-17 This book attempts to unify the economic analysis of the production process in order to understand the effects of technical change. It is both an analytical representation of the production process taking into account the temporal, organizational, and qualitative dimensions of production and a fact-finding model for studying the economic effects of technical change. The inclusion of temporal and organizational aspects allows the author to examine the analytical implications of recent research on the nature of firms and the characteristics of technical change while the model is used to analyze technical changes that involve variations of scale or degrees of flexibility. This book deals with themes much discussed in recent research in industrial economics and management studies and is an important contribution to bringing these two areas of research closer together, providing a general framework for the study of production processes. Technical Change, Relative Prices, and Environmental Resource Evaluation V. Kerry Smith, 2018-10-24 Originally published in 1974, *Technical Change, Relative Prices, and Environmental Resource Evaluation* explores the relationship between natural environmental resources and the differential implications of technological change and relative price appreciation. Smith claims that price is linked to technological progress and comments on the economic issues surrounding this. This title will be of interest to students of Environmental Studies and Economics. **Technical Change And Social Conflict In Agriculture** Martin E. Pineiro, Eduardo J. Trigo, 2019-06-21 This book presents the intellectual production of the first phase of the Cooperative Research Project on Agricultural Technology in Latin America (PROTAAL) and the most relevant papers presented by invitees at a meeting held in San Jose, Costa Rica, in September 1981. **Education, Skills, and Technical Change** Charles R. Hulten, Valerie A. Ramey, 2019-01-11 Over the past few decades, US business and industry have been transformed by the advances and redundancies produced by the knowledge economy. The workplace has changed, and much of the work differs from that performed by previous generations. Can human capital accumulation in the United States keep pace with the evolving demands placed on it, and how can the workforce of tomorrow acquire the skills and competencies that are most in demand? *Education, Skills, and Technical Change* explores various facets of these questions and provides an overview of educational attainment in the United States and the channels through which labor force skills and education affect GDP growth. Contributors to this volume focus on a range of educational and training institutions and bring new data to bear on how we understand the role of college and vocational education and the size and nature of the skills gap. This work links a range of research areas such as growth accounting, skill development, higher education, and immigration, and also examines how well students are being prepared for the current and future world of work. **Explaining Technical Change** Jon Elster, 1983-06-09 Technical change, defined as the manufacture and modification of tools, is generally thought to have played an important role in the evolution of intelligent life on earth, comparable to that of language. In this volume, first published in 1983, Jon Elster approaches the study of technical change.

from an epistemological perspective He first sets out the main methods of scientific explanation and then applies those methods to some of the central theories of technical change In particular Elster considers neoclassical evolutionary and Marxist theories whilst also devoting a chapter to Joseph Schumpeter's influential theory *Technical Change and Economic Growth* George M. Korres, 2016-12-05 Technological change is not only a determinant of growth but is also a pivotal factor in international competition and the modernization of an economy In one of the most in depth and detailed studies of its kind George Korres analyzes the macroeconomic and the microeconomic factors influencing the economics of innovation and the economic relations between technology innovation knowledge and productivity In particular this book examines both the theoretical framework and the applications for empirical results This second edition contributes updated figures and estimations for technical change from EU member states and features new subjects including growth models productivity models production function models and non parametric models In one of the most in depth and detailed studies of its kind this book captures all the existing contemporary techniques in the theoretical fields as well as the empirical applications of the models **Technology and Skills in Zimbabwe's Manufacturing** S. Teitel, 2000-10-03 Small Sub Saharan African countries are facing difficult times trying to accelerate their economic growth while at the same time attempting to liberalize their economies For many independence has brought political freedom without concomitant economic and social improvement for their indigenous populations Zimbabwe fits this description and while it has made significant strides in educating its populations and distributing some agricultural land it still lags in modernizing its manufacturing industries which survived for many years with little or no capital investment and restricted access to imports This study based on a detailed analysis of the results of a survey of manufacturing firms in selected industries shows the origin of the technologies they have mastered the use made of external and domestic sources of technology the skills being applied their training and other needs as well as the policies that could favourably affect future industrial development in Zimbabwe **Theory of Technical Change and Economic Invariance** Ryuzo Sato, 2014-05-10 Theory of Technical Change and Economic Invariance Application of Lie Groups presents the economic invariance problems observable behavior under general transformations such as taste change or technical change This book covers a variety of topics in economic theory ranging from the analysis of production functions to the general recoverability problem of optimal dynamic behavior Organized into nine chapters this book begins with an overview of the theory of observable behavior by analyzing the invariant relationships among economic variables This text then examines the Lie group theory which provides one of the most efficient methods of studying invariance properties Other chapters consider the analysis of exogenous technical change a process partly due to dynamic market forces of supply and demand This book discusses as well the topics closely related to parametric changes under Lie groups and related transformations The final chapter deals with mathematical foundations of the theory of observable market behavior This book is a valuable resource for economists *General Technical Report NC.*

,1981 **Technology Generation in Latin American Manufacturing Industries** Jorge M. Katz,1987-06-18 Presents results from research carried out as part of the Research Programme on Scientific and Technological Development in Latin America financed by the Inter American Development Bank the Economic Commission for Latin America and the United Nations Development Programme Looks at decision making behaviour within firms factors influencing technological research and the effect of domestically generated technology on firm performance Includes five enterprise level and three industry level case studies Economics and Technological Change Rod Coombs,Paolo Saviotti,Vivien Walsh,1987 An area of neglect in much of current economic theory has been its lack of attention to the impact of technological innovation on the structure and behavior of firms and the market This book is a comprehensive study of the economic implications of technological change for three primary institutions the firm the market and the civil sector *Managing the Modern Workplace* Alan Booth,2017-05-15 A recurring theme in the history of modern Britain in the twentieth century has been the failure of its manufacturing industry and the record of disorder and conflict in the industrial workplace This image was reinforced by the evidence of national strikes from the 1960s until 1984 This emphasis on decline and disorder in British manufacturing has distorted our understanding of workplace relationships and cultures in the post war years This volume provides a fresh assessment of the diverse and complex world of the workplace and Britain's production cultures during the long boom Essays investigate the public and private sectors and both manufacturing and service industries The volume begins with a comparison of labour management in the post war automobile industry exploring the role of the foreman in the management of shop floor labour in Britain and the USA The following two essays are concerned with relations between management and workers in the publicly owned corporations The first examines negotiations over pay and effort at the Swindon locomotive works including the cultural values which informed the behaviour of the bargainers The second investigates managerial responses to technical change in the British gas industry We then move into the service sector with an essay on the management of clerical staff in banks including a discussion of the different roles available to male and female workers and the incorporation of automated technologies The final essay looks at the involvement of the unions in workplace productivity and the extent to which Labour politics informed union behaviour The essays in this volume shed new light on the reasons for Britain's economic performance and opens up earlier interpretations of national decline and adversarial workplace cultures for further debate Reducing CO2 Emissions John L.R. Proops,Malte Faber,Gerhard Wagenhals,2012-12-06 The global greenhouse effect may be one of the greatest challenges ever to face humankind If fossil fuel use and the consequent CO emissions continue to increase at their current trend there is the possibility that over the next century there will be massive climate change and the flooding of coastal areas The economics profession is beginning to respond to this challenge through seeking to understand the economic processes which determine the demand for energy the proportion of this energy supplied by fossil fuels and the policy instruments available for reducing fossil fuel demand while still supplying appropriate amounts

of energy This study is a contribution to that literature We examine the impact of structural changes in the German and UK economies upon CO emissions over the last two decades and explore the potential for further structural change to reduce such emissions This study is different from much of the current literature in that we do not presuppose that the respective economies consist of only one or a few sectors Instead we analyse the interrelationships of 47 sectors for about 20 years using input output methods We also deal with the effects of the changing sectoral structure of imports and exports of these two countries on the responsibility for CO emissions On the basis of this extensive evidence we have a solid foundation to develop different scenarios to show how the Toronto target of reducing CO emissions by 20% over 20 years can be achieved

The Economics of New Health Technologies Joan Costa-Font, Christophe Courbage, Alistair McGuire, 2009-05-14

Technological change in healthcare has led to huge improvements in health services and the health status of populations It is also pinpointed as the main driver of healthcare expenditure Although offering remarkable benefits changes in technology are not free and often entail significant financial as well as physical or social risks These need to be balanced out in the setting of government regulations insurance contracts and individuals decisions to use and consume certain technologies With this in mind this book addresses the following important objectives to provide a detailed analysis of what technological change is to identify drivers of innovation in several healthcare areas to present existing mechanisms and processes for ensuring and valuing efficiency and development in the use of medical technologies and to analyse the impact of advances in medical technology on health healthcare expenditure and health insurance Each of the seventeen chapters summarizes an important issue concerning the innovation debate and contributes to a better understanding of the role innovation has both at the macro level and at the delivery meso and micro level in the healthcare sector The effectiveness of innovation in improving people's welfare depends on its diffusion and inception by the relevant agents in the health production process and this book recognizes the multi faceted contribution of policy makers regulators managers technicians consumers and patients to this technology change This book offers the first truly global economic analysis of healthcare technologies taking the subject beyond simply economic evaluation and exploring the behavioural aspects organization and incentives for new technology developments and the adoption and diffusion of these technologies

Learning and Technological Change Ross Thomson, 1993-10-13 In this book fifteen prominent scholars of the economy business and technology argue that technical change can fruitfully be interpreted as an institutionally structured learning process These essays show that the analysis of knowledge generating institutions including firms industries patenting systems and occupations provides important insights into the pace direction and persistence of technological change The authors use these insights to both reshape economic theory and reinterpret the economic development of Britain the USA Germany and Japan

The Anatomy of Job Loss (Routledge Revivals) Doreen Massey, Richard Meegan, 2014-11-06 Job loss is one of the most important issues in the capitalist world today endless reports document the increasing scale of unemployment This title first published in 1982 adopted a new

approach to the geography of job loss to assess why redundancy happens and where Massey and Meegan argue that an increase in dismissal does not necessarily mean that an industry is in decline rather it can be the result of a variety of issues including production for profit and the relationship between industry and location Throughout the book discussions about theory and methodology are complemented by industry based case studies This title addresses issues of particular relevance to today s economic climate and will be particularly valuable to students with an interest in employment and job loss and industrial labour and profitability

Agricultural Price Formation in Theory and Reality Ulrich Koester,Stephan von Cramon-Taubadel,2023-08-21 The thirteen chapters in this book introduce students to the theory and analysis of price determination in markets for agricultural and food products and in markets for the main factors of production in agriculture land labour and capital The book is targeted at advanced BSc as well as MSc students It covers neoclassical economic theory as well as the many unique institutions and policies that affect agricultural price determination The chapters cover important characteristics of agricultural and food markets and prices such as the role of institutions and organisations for agricultural price formation imperfect competition the role of technical change retail pricing price volatility and futures markets The included case studies and exercises will enable students to apply what they have learned and test their comprehension

The Evolution of Household Technology and Consumer Behavior, 1800-2000 Julia Sophie Woersdorfer,2017-03-27 The increasing division and specialization of labor between the market and the nonmarket sector is a central stylized fact of long run economic development Over time a large share of activities which had formerly been carried out by the private household itself has become replaced by market alternatives raising at the same time the demand for consumer goods The neoclassical economic framework of household production theory relates the increasing demand for household technology to rising wages and opportunity costs of time the higher the wage rate the more costly it is to spend time in unpaid housework activities Consumer products are thus purchased to make household production processes more efficient and to substitute capital

goods for the household's time substitution hypothesis. Although this hypothesis sounds plausible at first sight, it cannot capture the essential phenomena underlying the complex process of the mechanization of the home over the past 200 years. Its major weakness lies in the treatment of consumer preferences whose explanatory potential is explicitly factored out. Using the washing of clothes as a microcosm of household economics, this book examines long-term changes in cleanliness consumption patterns from the perspective of an evolutionary economic psychologically informed consumer theory. Woerdorfer shows how the historical evolution of cleanliness consumption over the past 200 years is the result of the interplay of supply and demand side factors, namely technical change in washing technology on one side and motivational driving forces and consumer learning capabilities on the other. Hence, not changing relative prices but innate consumer needs and consumer learning processes leading to a growing understanding of how to satisfy those needs are the essential driving forces behind the rising technological endowment of the home and the corresponding demand for household appliances. *The Evolution of Household Technology and Consumer Behavior 1800-2000* will be of interest to researchers in the field of evolutionary economics, history of technology, economic history, innovation economics, and sociology.

Forests in a Market Economy Erin O. Sills, Karen Lee Abt, 2013-04-17. This book draws together contributions from forest economists in the Research Triangle of North Carolina with co-authors from institutions around the world. It represents our common belief that rigorous empirical analysis in an economic framework can inform forest policy. We intend the book as a guide to the empirical methods that we have found most useful for addressing both traditional and modern areas of concern in forest policy, including timber production and markets, multiple use forestry, and valuation of non-market benefits. The book editors and most chapter authors are affiliated with three institutions in the Research Triangle: the Southern Research Station of the USDA Forest Service, K. Abt, Butry Holmes, Mercer Moulton, Prestemon, Wear, the Department of Forestry at North Carolina State University, R. Abt, Ahn, Cubbage, Sills, and the Environmental and Natural Resource Economics Program of Research Triangle Institute, Murray, Pattanayak. Two other Triangle institutions are also represented among the book authors: Duke University, Kramer, and the Forestland Group, Zinkhan. In addition to our primary affiliations, many of us are adjunct faculty and/or graduates of Triangle universities. Many of our co-authors also graduated from or were previously affiliated with Triangle institutions. Thus, the selection of topics, methods, and case studies reflects the work of this particular network of economists and, to some degree, our location in the southeastern United States. However, our work and the chapters encompass other regions of the United States and the world, including Latin America and Asia.
