Productive Water Points Dryland:

Waterlines, 2001 Innovations in Dryland Agriculture Muhammad Farooq, Kadambot H.M. Siddique, 2017-01-05 This book is a ready reference on recent innovations in dryland agriculture and reinforces the understanding for its utilization to develop environmentally sustainable and profitable food production systems It covers the basic concepts and history components and elements breeding and modelling efforts and potential benefits experiences challenges and innovations relevant to agriculture in dryland areas around world Productive Water Points in Dryland Areas Chris Lovell, 2000 Lack of water is the limiting factor for many household and community based activities for millions of people living in dryland areas Rural water supply programs tend to focus on only two social aspects improved access to domestic supply and improved sanitation Less attention has been paid to how communities prefer to use water to develop their own livelihoods This is due partly to the difficulties of abstracting sufficient reliable groundwater in dryland areas and partly to a misunderstanding of why wells and boreholes fail which leads to a general belief that abstraction should be limited to domestic supply to conserve the resource When more water is available not only are basic drinking and washing needs satisfied but also other activities with a high economic value become feasible such as small scale irrigation fruit orchards livestock feedlots small scale dairy units fish farming brick making etc Such diversification avoids over reliance on rain fed cropping of marginal lands This book shows how research in southern Africa has shed light on why conventional wells and boreholes fail on the potential of the groundwater resource to support production through improved siting and selection of more appropriate well designs and on the positive impacts and some problems that can emerge at productive water points Economics of Dryland Management John A. Dixon, David E. James, Paul B. Sherman, 2013-11-05 We have always had land in which the agricultural productivity is limited because there is not enough moisture Systems of farming and burning often degrade dryland further until it is desert Today however the problem is becoming much more serious Over 20 per cent of the world's population lives in dryland areas and unless action is taken drylands will increase dramatically This book focuses on the people who live and farm in the drylands their use of land resources and the economic returns from their decisions In a clear and thorough economic appraisal the authors show how it is still possible to arrest the problem Originally published in 1989 Sustainable Development of Dryland Agriculture in India R.P. Singh, 2011-01-01 There are chapters on varied topics covering the major gamut of dryland agriculture The topics covered by eminent scientists are Dryland agricultural research in India a historical perspective The eminence of authors and the institutions they represent gives credence to the contents of the book Research and development workers all would like to possess this book for ready reference and use *Tree-Based Production Systems for Africa's Drylands* Frank Place, Dennis Garrity, Sid Mohan, Paola Agostini, 2016-08-24 Tree based production systems have enormous potential to reduce vulnerability and increase the resilience of households living in dryland regions of Sub Saharan Africa Trees are key providers of biomass which is critical for many livelihood needs Wood from trees is the leading source of

energy in many dryland countries and is an important construction material. Foliage and pods from trees and shrubs are the most important source of feed for camels and goats which are the dominant livestock species in the more arid parts of the drylands. Trees and shrubs offer enhanced sources of the organic matter needed to improve the structure and raise the fertility of soils used for agriculture. Many parts of trees provide different medicinal products for people. And fruits and vegetable foliage harvested from trees are important seasonal food sources for people living in drylands and for sale. The benefits from trees take on added value when one considers that they are relatively impervious to many of the shocks that affect other production systems especially livestock keeping and agriculture. Trees with their deep rooting systems maintain their standing value and offer some production even in drought years. They are therefore a good buffer against climatic risk and are a critical element in a diversification strategy designed to maintain levels of consumption and income in good times and bad. In addition their value can be tapped when it is most needed wood from trees can be harvested throughout the year and many annual tree products are harvested at times different from the times when annual crops are harvested.

Tree Based Production Systems for Africa's Drylands identifies some of the most promising investment opportunities at the level of tree based systems, species products and well defined management practices for accelerating rural economic growth in the drylands.

Dryland Rivers L. J. Bull, M. J. Kirkby, 2002-03-22 Examines the processes operating in the headwaters and main channels of ephemeral rivers in semi arid environments and includes coverage of current fieldwork investigations, modeling approaches and management issues. Focuses on dryland channel networks and processes, presents a historical framework for research, discusses examples of current studies and evaluates contemporary modelling approaches. Emphasis is on the Mediterranean region with comparisons to other dryland regimes eg California, Australia, Chile.

Dryland Forestry Peter F. Ffolliott, Kenneth N. Brooks, Hans M. Gregersen, Allen L. Lundgren, 1994-12-13 Uses an innovative approach toward integrating biophysical and socioeconomical components into environmentally sound sustainable forest management practices in dryland regions. Covers technical considerations in dryland forestry, agroforestry, systems rehabilitation of saline regions, investment and employment opportunities, forestry extension programs and much more.

Drylands Peter Beaumont, 2014-04-08 Drylands which cover over half the world's area have witnessed rapid development, exploitation and change with the discovery of mineral reserves, urbanization and population growth. Environmental management is critical to the conservation and sustainable use of resources. This comprehensive text offers a systematic study of the physical nature of drylands and the history of human response to and uses of these harsh landscapes. Detailed case studies including urban as well as pastoral drylands from California to Soviet Central Asia, the Middle East, the Sahara and Australia contrast different management approaches and problems.

Building climate-resilient dryland forests and agrosilvopastoral production systems Haddad, F.F., Ariza, C., Malmer, A., 2021-03-19 With climate change impacts already felt in the world's drylands, there is an urgent need for action at various scales and initiated by different stakeholders to ensure the

sustainability of food production and livelihoods in these regions in the coming decades There is also the need to rapidly establish baselines assess and start monitoring progress on sustainability emerging as result of the action taken To aid in this effort this paper provides a short list of expected transformations under each of the three sustainability pillars for guiding the planning and implementation of policy governance and practice level actions Gender and indigenous people s rights and knowledge will be considered cross cutting issues The expected transformations will be shared with and agreed by dryland experts and practitioners and will be complemented with additional relevant information sources and indicators However it is recommended that national and subnational governments programmes projects and individual practitioners and experts define the indicators they will use for measuring their own progress towards the expected transformations based on the availability of data and specific national and local conditions The paper will also present case studies portraying actions that have led to progress in sustainability and are directly related to the expected transformations A related policy brief Blooming Drylands will complement the paper and offer practical recommendations on how policymakers can reach the expected transformations

Climate Change Adaptations in Dryland Agriculture in Semi-Arid Areas Xavier Poshiwa,G. Ravindra Chary,2022-02-10 This book highlights the approaches for achieving trans disciplinary research integration for semi arid dryland agriculture systems under changing climates while also identifying the elements of a collaborative research agenda that are needed to advance global food security The book emphasizes climate change being a reality and how drylands are bearing the brunt in diverse ways The major impact of dryland agriculture is on communities that need to avoid the short and long term impacts of the changing climate adapt strategies that can minimize these impacts and be able to mitigate climate change for which they need climate smart interventions These interventions are only realized through knowledge and experience sharing among stakeholders from different sectors and backgrounds It is in this context that the publication was seen as a necessity in order to bring together ideas that will transform lives and build adaptation capacities thereby providing the much needed products in communities leading to development Sustainable Management of Marginal Drylands UNESCO,2012-12-31 The Impact of Climate Change on Drylands A.J. Dietz,R. Ruben,A.

Verhagen,2006-04-11 Sahelian West Africa has recovered from the disastrous droughts of the 1970s and 1980s People have learned to adapt to risk and uncertainty in fragile dryland environments They as well as global change scientists are worried about the impact of climate change on these West African drylands What do the experiences of the last thirty years say about the preparedness for higher temperatures lower rainfall and even more variability Detailed studies on Dryland West Africa as a whole and on Burkina Faso Mali and Northern Ghana in particular show an advanced coping behaviour and increased adaptation but also major differences in vulnerability and coping potential Climate change preparedness programmes have only just started and require more robust support and more specific social targeting for a population which is rapidly growing even more rapidly urbanising and further integrating in a globalised economy This book is the first of its kind with a

comprehensive analysis of climate change experiences in West African drylands with attention for pathways of change and the diversity of adaptation options available This book is of interest to scientists studying global and climate change especially dealing with issues of adaptation Social scientists economists geographers and policy makers concerned with West Africa should also read this book

FISHERIES IN THE DRYLANDS OF SUB-SAHARAN AFRICA Food and Agriculture Organization of the United Nations, 2018-11-08 Drylands cover more than half sub Saharan Africa and are home to nearly 50 percent of the region s people This review documents resilience to climatic variability of fish resources in the sub Saharan drylands It also examines the potential for increasing their supply through improved use of available bodies of water especially small reservoirs

Contested Karoo: Interdisciplinary perspectives on change and continuity in South Africa's drylands Cherryl Walker, M Timm Hoffman, 2024-05-15 This inter disciplinary collection explores significant land use changes in South Africa s semi arid Karoo region and their implications for social justice and the environment across different scales It brings together recent scholarship by established and younger researchers in both the social and the natural sciences to examine the ways in which the Karoo is being reconfigured as a new resource frontier and the tensions and contestations that result Along with ongoing mining major investments in astronomy notably the Square Kilometre Array radio telescope in renewable and non renewable sources of energy solar wind potential shale gas mining in biodiversity conservation and commercial game farming are reshaping land use and authority in this vast and long marginalised area While promising significant benefits to society at large these developments are built on older histories of dispossession and extractivism histories that many Karoo residents fear are being reproduced in new forms today Collectively these dynamics place this unique region at the centre of national and global concerns around climate change the politics of knowledge production the conservation of threatened biodiversity and the meaning and possibility of sustainable development These issues are explored through a series of case studies of selected developments complemented by chapters

providing more historical context and general overviews While challenging perceptions of this region as a peripheral wasteland this collection raises conceptual and policy questions that resonate far beyond the Karoo itself It also highlights the importance of interdisciplinary collaboration in research aimed not only at understanding but also at responding appropriately to the mounting challenges of our time

A Manual for Dryland Afforestation and Management G. Singh, Bilas Singh, U.K. Tomar, Shruti Sharma, 2017-01-01 Community oriented conservation of natural resources and promotion and protection of trees in drylands are examples to deal with climatic adversities This book provides knowledge on climatic ecological social and economic condition of dry areas and lay out approaches and strategies to restore degraded lands There are 15 chapters and first five deals with physiography of Rajasthan drylands ecology problems of land degradation its economic evaluation and the approaches and strategies of restoration and rehabilitation Next two chapters describe the problems of sand drift salinity water logging and effluent inflicted areas and strategies to control them Chapters 8 10 deal with seed production quality planting materials genetic improvement propagation and planting techniques Chapters 11 12 describe methods of rain water harvesting and irrigation and resources conservation for seed sowing and favouring regeneration and successions Effective management of pests diseases in nurseries and plantation growth and yield prediction equations and models and people s perception and participation in managing forest resources have been described in last 3 chapters Purpose of this publication is to strengthen the forest functionaries and readers with wide ranging knowledge on land degradation desertification and eco biology of drylands and methods to restore and rehabilitate degrading forest lands to increase forest cover enhance resilience and people livelihoods and improve environmental conditions Academician researchers forest managers non government organizations extension agents and environmentalists can use it in developing conserving and managing drylands ecosystems for its long lasting beneficial effects This book is also useful to policy makers in effective planning of restoring protecting and conserving dryland s ecological and socioeconomic services

Terrestrial Biospheric Carbon Fluxes Quantification of Sinks and Sources of CO₂ Joe Wisniewski, R. Neil

Sampson, 2012-12-06 Towards the Balance and Management of the Carbon Budget of the Biosphere The current state of misunderstanding of the global C cycle and our failure to resolve an issue that has been debated for 100 years Jones and Henderson Sellers 1990 speaks loudly about the limitations of modern science when faced with the complexity of the biosphere Efforts to understand and balance the global C budget have gone through several phases First was a holistic view of the C budget as part of efforts to understand the geochemistry of the Earth e g Clarke 1908 Next came a period of data collection and synthesis which focused on the diversity of sectors of the biosphere This phase culminated in the early 1970 s with the realization that humans were greatly impacting the global C cycle as measured at the Mauna Loa Observatory Keeling et al 1973 New syntheses of the global C budget emerged at this time Woodwell and Pacan 1973 Bolin et al 1979 The next phase was one of controversy and intense focus on particular sectors of the biosphere The controversy rested on

discrepancies about the role of the terrestrial biota in the global C cycle and the failure to account for sufficient C sinks to absorb all the C emitted by land use change in the tropics Woodwell et al 1978 1983 Houghton et al 1983 Climate Change and Sustainable Agro-ecology in Global Drylands Adel El-Beltagy, Rattan Lal, Kauser Malik, 2024-10-30 Drylands a home for nearly 2.5 billion people are highly vulnerable to anthropogenic climate change and dryland area may expand to 50% of the Earth's surface by 2100 Climate change may aggravate the prevalence of undernutrition and malnutrition because of adverse effects on quantity and quality of food production in these regions This book takes a holistic approach to sustainable management of drylands to make agriculture drought resilient Eminent scientists from around the world share their knowledge and experiences for adaptation and mitigation of the anthropogenic climate change through innovation in sustainable management of water soil crops livestock and fisheries They anticipate that climate change will have major impacts on agro ecosystems which requires continuous dynamic assessments globally regionally and at the local level where the major action of adaptation would have to occur The assessment will require international cooperation and national capacity building This book emphasizes approaches such as smart and precision agriculture conservation agriculture and new innovation and technology as tools for adaptation and mitigation Several chapters are devoted to the human dimensions and policy considerations with emphasis on enhancing coping and adaptive capacity This book addresses the picture after COP27 including loss and damage governance and finance This work will be valuable to students and researchers in agroecology climate change science and dryland agriculture *Highland-lowland Interaction in Mesoamerica* Arthur G.
