These volumes discuss on Large scale power production which requires the use of heat in a thermodynamic cycle to produce

mechanical work which in turn can generate electrical energy Substantial quantities of fuel are hence required to sustain the

production of heat Fuel may be combustible as in the case of fossil fuels such as coal and oil or fissionable as in the case of

nuclear fuels such as uranium All fuels produce waste products which must be discharged dumped or stored Such products

range from innocuous water vapor to hazardous nuclear waste These volumes are aimed at the following five major target
