The Vanishing Farmland Crisis John Baden,2021-10-08 Newspapers seem to be telling us that every cornfield is threatened by a Dairy Queen This media barrage about the crisis of our shrinking farmland can be traced to the 1979 publication of *Where Have All the Farmlands Gone* by the National Agricultural Lands Study The NALS report to which eleven federal agencies contributed argued that land use planning and control must be employed to protect valuable farmland from urban sprawl This volume a collection of essays by a distinguished group of economists including Theodore W Schultz Julian L Simon and Pierre Crosson takes issue with the belief that croplands need governmental protection In opposition the collection as a whole supports two theses 1 shrinking farm acreage is not a serious problem and 2 individual choices by landowners in a market setting result in better organized land use than would governmental land use planning and regulation Published for the Political Economy Research Center Bozeman Montana

Hyde,2012-05-23 This book traces the economic and biological pattern of forest development from initial settlement and harvest activity at the natural forest frontier to modern industrial forest plantations It builds from diagrams describing three discrete stages of forest development and then discusses the management and policy implications associated with each supporting its observations with examples and data from six continents and from both developed and developing countries It shows that characteristic distinctions between the three stages make forestry unusual in natural resource management and that effective policy requires different even contrasting decisions at each stage William F Hyde s comprehensive discussion covers a wide range of issues including the impacts of both specific forest policies and broader macroeconomic policies the unique requirements of current issues such as global warming biodiversity and tourism and the complexities of the different forest products industries Concluding chapters review the roles of the newer institutional landowners of smaller private and farm landowners and of public agencies This highly original volume reaches far beyond forest economics it explains what forestry can do for regional development and environmental conservation and what policies designed for other sectors and the macro economy can do for forestry Soil & Water Conservation News ,1984 *Conservation Research Report* United States.
