This book comprises a detailed analysis of labour productivity in the British American and German distributive trades as a contribution to the debate on Britain's economic performance and the improvement of that performance. Productivity levels are measured separately for the retail and wholesale sectors and for individual trades in the three countries and then compared internationally in detail. The study proceeds to spotlight the causes of the differentials which emerge especially the role of international contrasts in shop depot and firm size the role of independents and multiples the extent of self service the location of the distributive trades and living standards. Besides portraying the current picture the book also traces over the postwar period developments in labour productivity levels in the retail and wholesale trades of Britain America and Germany. These trends are then related to the extent to which the three countries have experienced and benefited from the retail revolution and its associated features.

This book should become a standard reference in the field. It combines rigorous modeling with sophisticated econometrics and includes telling examples to illustrate general principles. Dennis C Mueller University of Vienna Austria. This book provides a uniform and coherent approach to the analysis of distribution systems in general and retail systems in particular. It develops the fundamentals of retail demand and supply and demonstrates how the provision of distribution services is a principal determinant of economic outcomes in retail exchanges for both retailers and their customers as well as for other agents such as suppliers and franchisors. The author integrates the existing literature with new applications to provide novel insights into the multi product nature of retailing the service aspects of packaging and the evolution of retail formats such as supermarkets non store retailers including the Internet and shopping centers. He illustrates how the complementarity that underlies retail activities leads to lower average prices for customers. This integrative process also brings out the role of distribution services as mechanisms to exercise economic power. This is evident not only in channels of distribution but in the evolution of Wal Mart and the development of franchise contracts. The author also identifies the crucial differences between the retailing of goods and the retailing of services. This impressive volume skilfully integrates conceptual theoretical and empirical research to analyse critical issues in the economics of retailing and distribution. It will be required reading for academics and professional economists interested in industrial organization marketing applied microeconomics and business.
