Productivity Technology And Economic Growth:

Productivity, Technology and Economic Growth Bart van Ark, Simon K. Kuipers, Gerard H. Kuper, 2013-03-09 Productivity Technology and Economic Growth presents a selection of recent research advances on long term economic growth While the contributions stem from both economic history macro and microeconomics and the economics of innovation all papers depart from a common viewpoint the key factor behind long term growth is productivity and the latter is primarily driven by technological change Most contributions show implicitly or explicitly that technological change is at least partly dependent on growth itself Furthermore technology appears to interact strongly with investment in physical and human capital as well as with changes in historical political and institutional settings Together these papers are an up to date account of the remarkable convergence in theoretical and empirical work on productivity and growth over the past decades The first part deals with the characteristics of growth regimes over longer periods ranging from 20 years to two centuries The next four chapters study the determinants of productivity growth and in some cases productivity slowdown during the last quarter of the twentieth century The final five chapters focus on the role of technology and innovation as the key determinants of growth Productivity Technology and Economic Growth is therefore a welcome collection for academic scholars and graduate students in economics history and related social sciences as well as for policy makers

The Economics of Productivity

Dale Weldeau Jorgenson, 2009 The remarkable behavior of information technology prices provides the key to the resurgence of productivity growth in the USA and the world economy This title presents the contemporary framework for productivity measurement that focuses on the impact of information technology on economic growth

Information Technology, Productivity, and Economic Growth Matti Pohjola, 2001 The often advocated view that the information technology revolution will change the world must stem from the basic premiss that investment in IT has a visible impact on productivity and economic growth But how can we measure this impact and how large is it By surveying previous studies and by presenting new micro and macroeconomic evidence this collection shows that in recent years the use of IT in the production of goods and services has had a strong influence on productivity and economic growth in industrial and in newly industrialized countries Yet developing countries seem neither to have invested in IT nor benefited from such investments to the same extent as industrial countries There is concern that information is becoming a commodity like income and wealth by which countries are classified as rich and poor The contributors to this volume argue that investment in infrastructure physical capital and education is the key to economic development This is an old policy prescription in the economics of development What is new is the suggestion that the IT content of these investments should be high The use of IT is so widely spread throughout the world economy that no single country can avoid investing in this technology if it wants to improve the standard of living of its citizens Besides providing citizens with access to IT and to IT education and training governments should promote participation in the information society thus generating a sufficiently strong demand base for information

products By developing advanced applications of IT and by becoming a model for the private sector governments can alter worker firm and consumer attitudes and lower their costs of adopting IT The use of IT not necessarily its production is what matters for economic development *Technological Change and Economic Performance* Albert N. Link,Donald Siegel,2003-02-20 Reviews of the literature on historical and theoretical developments of technology and economic growth including productivity measures technical knowledge technological spillovers and stock market reactions to technology investment **Selected Publications on Productivity, Technology and Economic Growth as of January 31, 1969**

United States. Bureau of Labor Statistics,1969 **Technology, Growth, and the Labor Market** Donna K. Ginther,Madeline Zavodny,2012-12-06 Technology Growth and the Labor Market brings together research by economists from academia and the Federal Reserve System The first section of the volume includes discussions by monetary policymakers with firsthand experience in determining how technology affects productivity inequality and macroeconomic growth Papers in the second section discuss the sources of the surge in labor productivity growth during the latter half of the 1990s and present forecasts of labor productivity growth rates during the next few years In the third section the papers focus on the role of technological advances in changes in earnings inequality in the labor market The authors examine whether inequality should be viewed as a causal result of skill biased technological change or whether there is a missing link or perhaps no link between changes in technology and changes in wage inequality The final section explores the relationships between computer investment worker skills human resource practices and productivity at the industry and firm levels

Productivity: Information technology and the American growth resurgence Dale Weldeau Jorgenson,Mun S. Ho,Kevin J. Stiroh,1995 A study of information technology and economic growth since 1995 that tracks the American growth resurgence to its sources within individual industries The American economy has experienced renewed growth since 1995 with this surge rooted in the development and deployment of information technology IT This book traces the American growth resurgence to its sources within individual industries documents the critical role of IT and shows how U S nvestment in IT has important parallels in other developed countries In analyzing the experience in the United States the authors identify four IT producing industries 17 IT using industries and 23 non IT industries and show that the IT producing and IT using industries play a disproportionate role in the American growth resurgence These industries account for only about 30 percent of US GDP but contributed half of the acceleration in economic growth The study finds that differences in the relative importance of IT producing industries in other G7 countries have contributed to wide disparities in the impact of IT on economic growth Productivity Volume 3 will be of special interest to analysts of the new economy and its remarkable persistence through periods of boom and recession Technology, Productivity, and Economic Growth Susanto Basu,Lucy Eldridge,John Haltiwanger,Erich Strassner,2025-07-07 A wide reaching exploration of how technological advancements influence and shape productivity and economic growth Current technological developments in several industries such as the

rise of artificial intelligence and innovations associated with the green energy transition are likely to have significant and wide ranging effects This volume explores the implications of rapid changes in advanced technology and considers how to conceptualize and model these advances and improve measures of productivity and economic growth The study of these issues is facilitated both by new methods for using and integrating disparate data sources and by the availability of new data sources The chapters in this volume leverage these developments to offer fresh insights into long standing issues in productivity analysis and technological change Information Technology, Productivity, and Economic Growth World Institute for Development Economics Research, Suomen itsenäisyyden juhlarahasto, 2001 The contributors to this volume argue that investment in infrastructure physical capital and education is the key to economic development providing that the IT content of these investments is high Technology and Human Capital in Historical Perspective Jonas Ljungberg, 2004-10-29 One theme of this volume is whether the complementarity between technology and human capital is a recent phenomenon or whether it can be traced through history Different approaches to human capital as well as technology are applied and besides historical surveys are total factor productivity and patent data employed The studies deal with the Iberian peninsula Scandinavia and Canada countries displaying different patterns in the international development
