Professional Content Management Systems Handling Digital Media Assets:

Professional Content Management Systems Andreas Mauthe, Peter Thomas, 2005-08-05 Content and Content Management are core topics in the IT and broadcast industry. However, these terms have not been clearly defined for those learning the field. The topic is complex and users from different industries have different backgrounds and a varied understanding of content issues. Multimedia Content Management helps to clarify the subject area, define problematic issues, and establish a universal understanding of content and its management. Provides clarity in the subject area. Defines potential problems and establishes a universal understanding. Builds an architectural framework upon this account and different aspects of the industry and solutions are reviewed. Comprehensively describes the different users working and accessing content, the applications and workflows. Essential reading for students, engineers, and technical managers in the area of data storage management and multimedia requiring an overview of this complex topic. The topics discussed will also prove highly insightful for executive managers and media professionals with a technical understanding and broadcast executives in the field.

Libraries in the Twenty-First Century Stuart J. Ferguson, 2007-05-31 Libraries in the Twenty-First Century brings together library educators and practitioners to provide a scholarly yet accessible overview of library and information management and the challenges that the twenty-first century offers the information profession. The papers in this collection illustrate the changing nature of the library as it evolves into its twenty-first century manifestation. The national libraries of Australia and New Zealand, for instance, have harnessed information and communication technologies to create institutions that are far more national even democratic in terms of delivery of service and sheer presence than their print-based predecessors. Aimed at practitioners and students alike, this publication covers specific types of library and information agencies, discusses specific aspects of library and information management, and places developments in library and information services in a number of broad contexts: socio-economic, ethico-legal, historical, and educational.

Handbook of Research on Managing and Designing Online Courses in Synchronous and Asynchronous Environments Durak, Gürhan, Çankaya, Serkan, 2021-12-17 In order to be successful, online learning should be planned systematically. It can be said that offering distance education courses without preparation and knowledge about the theoretical background can cause drawbacks. While distance education has become widespread and popular, it is observed that there could be problems in its application. Such problems can include technical problems, inability to meet the learning needs at the learners' own speeds, lack of communication among learners and between learners and teachers, and lack of quality materials appropriate for online learning or the inclusion of materials used in traditional methods directly into online learning. For successful online courses, these critical aspects of distance education are important and they should be taken into account by the institutions and the instructors offering online courses. The Handbook of Research on Managing and Designing Online Courses in Synchronous and Asynchronous Environments provides up-to-date knowledge and

experiences regarding technologies processes and environments for online course design in distance education systems and covers topics related to the aspects of successful distance education systems with a focus on teaching and learning in online environments Focusing on topics such as instructional design and integrated systems it is an ideal guide for online course designers instructional designers curricula developers administrators educators researchers trainers and students
