draws its inspiration from Biology and Darwinian evolution GP is a very versatile technique which has been applied to a wide range of tasks as a quick inspection of the 32 papers in these proceedings will easily reveal economics robotics engineering statistics pharmacology electronics and nanotechnology are but some of the domains in which they have been employed

Although the rate of application of GP to problems is steadily growing this conference is characterized by its concern with the theoretical foundations of GP investigation of these issues is attaining an ever increasing depth and maturity

evolutionary machine learning to a variety of problem domains This book will serve as an essential reference for researchers postgraduate students practitioners in industry and all those interested in evolutionary approaches to machine learning

Behavioral Program Synthesis with Genetic Programming Krzysztof Krawiec, 2015-12-15 Genetic programming GP is a popular heuristic methodology of program synthesis with origins in evolutionary computation In this generate and test approach candidate programs are iteratively produced and evaluated The latter involves running programs on tests where they exhibit complex behaviors reflected in changes of variables registers or memory That behavior not only ultimately determines program output but may also reveal its hidden qualities and important characteristics of the considered synthesis problem However the conventional GP is oblivious to most of that information and usually cares only about the number of tests passed by a program This evaluation bottleneck leaves search algorithm underinformed about the actual and potential qualities of candidate programs This book proposes behavioral program synthesis a conceptual framework that opens GP to detailed information on program behavior in order to make program synthesis more efficient Several existing and novel mechanisms subscribing to that perspective to varying extent are presented and discussed including implicit fitness sharing semantic GP co solvability trace convergence analysis pattern guided program synthesis and behavioral archives of subprograms The framework involves several concepts that are new to GP including execution record combined trace and search driver a generalization of objective function Empirical evidence gathered in several presented experiments clearly demonstrates the usefulness of behavioral approach The book contains also an extensive discussion of implications of the behavioral perspective for program synthesis and beyond

**Applications of Evolutionary Computing** Günther R. Raidl, Stefano Cagnoni, Jürgen Branke, David W. Corne, Rolf Drechsler, Yaochu Jin, Colin G. Johnson, Penousal Machado, Elena Marchiori, Franz Rothlauf, George D. Smith, Giovanni Squillero, 2004-03-09 Evolutionary Computation EC deals with problem solving optimization and machine learning techniques inspired by principles of natural evolution and netics Just from this basic definition it is clear that one of the main features of the research community involved in the study of its theory and its applications is multidisciplinary For this reason EC has been able to draw the attention of an ever increasing number of researchers and practitioners in several elds In its 6 year long activity EvoNet the European Network of Excellence in Evolutionary Computing has been the natural reference and incubator for that multifaceted community EvoNet has provided logistic and material support for those who were already involved in EC but in the rst place it has had a critical role in favoring the significant growth of the EC community and its interactions with longer established ones The main instrument that has made this possible has been the series of events rst organized in 1998 that have spanned over both theoretical and practical aspects of EC Ever since 1999 the present format in which the EvoWorkshops a collection of workshops on the most application oriented aspects of EC act as satellites of a core event has proven to be very successful and very representative of the multidisciplinary of EC Up to 2003 the core was represented by EuroGP the main European event dedicated to Genetic Programming EuroGP has been joined as the main event in 2004 by EvoCOP formerly part of EvoWorkshops which has become the European Conference on Evolutionary Computation in Combinatorial Optimization

*Genetic Programming* John R. Koza, 1992 In this ground breaking book John Koza shows how this remarkable paradigm works and provides substantial empirical evidence that solutions to a great variety of problems from many different fields can be found by genetically breeding populations of computer programs Genetic programming may be more powerful than neural networks and other

machine learning techniques able to solve problems in a wider range of disciplines In this ground breaking book John Koza shows how this remarkable paradigm works and provides substantial empirical evidence that solutions to a great variety of problems from many different fields can be found by genetically breeding populations of computer programs Genetic Programming contains a great many worked examples and includes a sample computer code that will allow readers to run their own programs In getting computers to solve problems without being explicitly programmed Koza stresses two points that seemingly different problems from a variety of fields can be reformulated as problems of program induction and that the recently developed genetic programming paradigm provides a way to search the space of possible computer programs for a highly fit individual computer program to solve the problems of program induction Good programs are found by evolving them in a computer against a fitness measure instead of by sitting down and writing them

**Learning Classifier Systems**

Pier L. Lanzi, Wolfgang Stolzmann, Stewart W. Wilson, 2003-06-26 Learning Classifier Systems LCS are a machine learning paradigm introduced by John Holland in 1976 They are rule based systems in which learning is viewed as a process of ongoing adaptation to a partially unknown environment through genetic algorithms and temporal difference learning This book provides a unique survey of the current state of the art of LCS and highlights some of the most promising research directions The first part presents various views of leading people on what learning classifier systems are The second part is devoted to advanced topics of current interest including alternative representations methods for evaluating rule utility and extensions to existing classifier system models The final part is dedicated to promising applications in areas like data mining medical data analysis economic trading agents aircraft maneuvering and autonomous robotics An appendix comprising 467 entries provides a comprehensive LCS bibliography
