Programming Language Design And Implementation White Plains New York June:

Programming Language Implementation and Logic Programming Jan Małuszyński, Martin Wirsing, 1991-08-14 This volume contains the papers which have been accepted for presentation at the Third International Symposium on Programming Language Implementation and Logic Programming PLILP 91 held in Passau Germany August 26-28 1991. The aim of the symposium was to explore new declarative concepts, methods and techniques relevant for the implementation of all kinds of programming languages, whether algorithmic or declarative ones. The intention was to gather researchers from the fields of algorithmic programming languages as well as logic, functional and object-oriented programming. This volume contains the two invited talks given at the symposium by H. Ait Kaci and D. B. MacQueen, 32 selected papers and abstracts of several system demonstrations. The proceedings of PLILP 88 and PLILP 90 are available as Lecture Notes in Computer Science Volumes 348 and 456.

Programming Languages and Systems Gert Smolka, 2003-06-26 ETAPS 2000 was the third instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised five conferences: FOSSACS, FASE, ESOP, CC, TACAS, five satellite workshops, CBS, CMCS, CoFI, GRATRA, INT, seven invited lectures, a panel discussion and ten tutorials. The events that comprise ETAPS address various aspects of the system development process, including specification, design, implementation, analysis and improvement. The languages, methodologies and tools which support these activities are all well within its scope. Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

Semantics, Applications, and Implementation of Program Generation Walid Taha, 2003-06-30 This volume constitutes the proceedings of the second International Workshop on the Semantics, Applications and Implementation of Program Generation SAIG 2001 held on 6 September 2001 in Florence, Italy. SAIG 2001 was held as an ACM SIGPLAN workshop co-located with the International Conference on Principles, Logics and Implementations of High-level Programming Languages PLI. As the commercial production of software systems moves toward being a traditional industry, automation will necessarily play a more substantial role in this industry just as it plays a key role in the production of traditional commodities. SAIG aims at promoting the development and the application of foundational techniques for supporting automatic program generation. A key goal of SAIG is to provide a unique forum for both theoreticians and practitioners to present their results and ideas to an audience from a diverse background. This year we are fortunate to have three influential invited speakers: Krzysztof Czarnecki (DaimlerChrysler), Tim Sheard (OGI School of Science and Engineering) and Mitchell Wand (Northeastern University). The proceedings include abstracts of the invited talks and an invited paper by Tim Sheard. Seven technical papers and two position papers were presented at SAIG 2001.

Static Analysis Jens Palsberg, 2004-02-02 This book constitutes

the refereed proceedings of the 7th International Static Analysis Symposium SAS 2000 held in Santa Barbara CA USA in June July 2000 The 20 revised full papers presented were carefully reviewed and selected from 52 submissions Also included are 2 invited full papers All current aspects of high performance implementation and verification of programming languages are addressed in particular object logics model checking constraint solving abstract interpretation program transformation rewriting confidentiality analysis typed languages unified analysis code optimization termination code specialization and guided abstraction *Proceedings of the 1994 ACM Conference on LISP and Functional Programming* ,1994

Parallel Symbolic Computing: Languages, Systems, and Applications Robert H. Halstead,Takayasu Ito,1993-11-03 Parallel and distributed computing are becoming increasingly important as cost effective ways to achieve high computational performance Symbolic computations are notable for their use of irregular data structures and hence parallel symbolic computing has its own distinctive set of technical challenges The papers in this book are based on presentations made at a workshop at MIT in October 1992 They present results in a wide range of areas including speculative computation scheduling techniques program development tools and environments programming languages and systems models of concurrency and distribution parallel computer architecture and symbolic applications *Conference Record of POPL '95* ,1995
