Programming Paradigms In Graphics 95:

Visualization in Scientific Computing '97 Wilfrid Lefer, Michel Grave, 2013-12-01 Visualization is now recognized as a powerful approach to get insight in large datasets produced by scientific experimentations and simulations The contributions to this book cover technical aspects as well as concrete applications of visualization in various domains such as finance physics astronomy and medicine providing researchers and engineers with valuable information for setting up new powerful environments

Visualization and Mathematics H.-C. Hege, K. Polthier, 2012-12-06 Visualization and mathematics have begun a fruitful relationship establishing links between problems and solutions of both fields In some areas of mathematics like differential geometry and numerical mathematics visualization techniques are applied with great success However visualization methods are relying heavily on mathematical concepts Applications of visualization in mathematical research and the use of mathematical methods in visualization have been topic of an international workshop in Berlin in June 1995 Selected contributions treat topics of particular interest in current research Experts are reporting on their latest work giving an overview on this fascinating new area The reader will get insight to state of the art techniques for solving visualization problems and mathematical questions

Design, Specification and Verification of Interactive Systems '97 Michael D. Harrison, Juan C. Torres, 2012-12-06 An increasing recognition of the role of the human system interface is leading to new extensions and styles of specification Techniques are being developed that facilitate the expression of user oriented requirements and the refinement and checking of specifications of interactive systems This book reflects the state of the art in this important area and also contains a summary of working group discussions about how the various techniques represented might be applied to a common case study

Coordination Languages and Models Paolo Ciancarini, Alexander L. Wolf, 2003-07-31 We welcome you to Coordination 99 the third in a series of conferences dedicated to an important perspective on the development of complex software systems That perspective is shared by a growing community of researchers interested in models languages and implementation techniques for coordination The last decade has seen the emergence of a class of models and languages variously termed coordination languages configuration languages architectural description languages and agent oriented programming languages These formalisms provide a clean separation between individual software components and their interaction within the overall software organization This separation makes complex applications more tractable supports global analysis and enhances the reuse of software components The proceedings of the previous two conferences on this topic were published by Springer as Lecture Notes in Computer Science 1061 and 1282 This issue of LNCS containing the papers presented at Coordination 99 continues the tradition of carefully selected and high quality papers representing the state of the art in coordination technology In response to the call for papers were received 67 submissions from which 26 papers were accepted These proceedings also contain abstracts for posters presented at the conference This year's program features invited talks by Rocco De Nicola and Danny B Lange Reading through the papers we expect that you may be

surprised by the variety of disciplines within computer science that have embraced the notion of coordination. In fact we expect this trend to continue and hope that you will contribute to the on going exploration of its strengths weaknesses and applications

Rendering Techniques '97 Julie Dorsey, Philipp Slusallek, 2012-12-06 The book contains the proceedings of the 8th Eurographics Rendering Workshop which took place from 16th to 18th June 1997 in Saint Etienne France. After a series of seven successful events the workshop is now well established as the major international forum in the field of rendering and illumination techniques. It brought together the experts of this field. Their recent research results are compiled in this proceedings together with many color images that demonstrate new ideas and techniques. This year we received a total of 63 submissions of which 28 were selected for the workshop after a period of careful reviewing and evaluation by the 27 members of the international program committee. The quality of the submissions was again very high and unfortunately many interesting papers had to be rejected. In addition to regular papers the program also contains two invited lectures by Shenchang Eric Chen Live Picture and Per Christensen Mental Images. The papers in this proceedings contain new research results in the areas of Finite Element and Monte Carlo illumination algorithms image based rendering outdoor and natural illumination error metrics perception texture and color handling data acquisition for rendering and efficient use of hardware. While some contributions report results from more efficient or elegant algorithms others pursue new and experimental approaches to find better solutions to the open problems in rendering

Design, Specification and Verification of Interactive Systems '96 Francois Bodart, Jean Vanderdonckt, 2012-12-06 Making systems easier to use implies an ever increasing complexity in managing communication between users and applications. Indeed an increasing part of the application code is devoted to the user interface portion. In order to manage this complexity it is important to have tools notations and methodologies which support the designer's work during the refinement process from specification to implementation. Selected revised papers from the Eurographics workshop in Namur review the state of the art in this area comparing the different existing approaches to this field in order to identify the principle requirements and the most suitable notations and indicate the meaningful results which can be obtained from them

Virtual Worlds on the Internet John Vince, Rae Earnshaw, 1999-01-10 In recent years computer graphics has evolved into four major disciplines computer animation image processing visualization and virtual reality. Now these technologies are converging into one seamless digital medium resulting in various tools that will transform the way we work in the next century. Virtual Worlds on the Internet examines how the latest developments in virtual environments computer animation communication networks and the Internet are being configured to create revolutionary tools and systems. Vince and Earnshaw have selected twenty papers they believe will influence computer systems of the twenty first century. The topics discussed in this book include A toolkit for the development of virtual environment applications for education and research Behavior descriptions used in expansive virtual environments Different uses of VRML in information system interfaces An examination of research in virtual reality

environment interfaces Five approaches to supporting changes in virtual environments How ATM networks can support multi user 3D virtual environments The transmission of vector graphics and animations over narrow band transmission channels An exploration of an implicit modeling system including an interactive editor for building models A description of the advantages of 3D environments for shopping applications on the Internet The prototype of a software tool that automatically generates 3D models of virtual supermarkets A VR Workbench that displays strategic information viewable by a user groups An overview of a VR display system describing its workbench technology and its applications How to separate the functionality of a multi user 3D modeling system into functional tools with interface specifications

Computer Animation and Simulation '96 Ronan Boulic, Gerard Hegron, 2012-12-06 The 14 papers in this volume vividly demonstrate the current state of research in real time animation Half of the papers are dedicated to algorithm allowing the real time animation of complex articulated structure in particular humans legged robots plants and of dynamic scenes in general The proposed approaches cover from motion capture to motion reusability which are essential issues for high end applications as 3D games virtual reality etc Other topics treated are motion management for fast design of realistic movements 2D and 3D deformations and various optimization techniques for simulation adaptive mass spring refinement huge particule systems

Multimedia '96 Bodo Urban, 2012-12-06 In the last few years multimedia hardware and applications have become widely available on PC and workstations Moreover through the tremendous development and the wide usage of the World Wide Web multimedia applications have been brought over the network to many people This book presents the results of the fourth in a well established series of international workshops on Multimedia organized by the EUROGRAPHICS Association and held from May 28 to 30 1996 in Rostock Germany The workshop had the special topic Multimedia on the Net and was the follow up of the EUROGRAPHICS Symposium and Workshop on Multimedia held in Graz in June 1994 The workshop program consisted of an invited keynote speech and five technical sessions The fifteen contributions selected for this volume treat topics of particular interest in current research and address actual problems of the use of multimedia in distributed applications over the network According to the technical sessions they can be roughly structured in the parts concepts for handling multimedia data still and motion pictures on the net WWW and multimedia collaborative multimedia and multimedia and education Concepts for handling multimedia data are addressed in two contributions The first treats a frame based presentation model for distributed information systems Kirste the other one presents a temporal logic formalism for specifying navigational transformation in hypermedia applications Mere et al

Artificial Intelligence in Design '96 John S. Gero, Fay Sudweeks, 2012-12-06 Change is one of the most significant parameters in our society Designers are amongst the primary change agents for any society As a consequence design is an important research topic in engineering and architecture and related disciplines since design is not only a means of change but is also one of the keystones to economic competitiveness and the fundamental precursor to manufacturing The development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research both computational and cognitive These forms of design research have only been carried out in the last decade or so and in the temporal sense they are still immature Notwithstanding this immaturity noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding Whilst many researchers in the field of artificial intelligence in design utilise ideas about how humans design as one source of concepts there is normally no attempt to model human designers Rather the results of the research presented in this volume demonstrate approaches to increasing our understanding of design as a process
