**Dynamic Web Programming: A Beginner's Guide** Marty Matthews, John Cronan, 2009-10-28 Publisher's Note

Products purchased from Third Party sellers are not guaranteed by the publisher for quality authenticity or access to any online entitlements included with the product. Move beyond basic Web design by learning to create dynamic Web content. To create a dynamic page on which content changes in response to events requires programming and the potential use of databases. Dynamic Web Programming: A Beginner's Guide starts by covering HTML, XHTML, and CSS. You will then learn to use JavaScript to implement elements such as rollover events, popups, and calculations. The book explains how to use PHP to create guest books, blogs, and page transitions, as well as how to implement a database driven Web site with MySQL.

**Programming the Web Using XHTML and JavaScript** Larry Randles, Lagerstrom, 2003 Compatible with introductory Web authoring courses offered in many colleges and technical schools, this guide requires no previous knowledge of the topic or HTML. It begins by explaining HTML and gently guides the reader into a sound understanding of the basics of Web programming.

**Web Programming** Chris Bates, 2006-05-26 This text teaches the essentials of working with the most important web technologies. From client development using HTML and JavaScript through to full server side applications

written in ASP and Perl.

**Head First HTML5 Programming** Eric Freeman, Elisabeth Robson, 2011-10-06 HTML has been on a wild ride. Sure, HTML started as a mere markup language, but more recently, HTML's put on some major muscle. Now we've got a language tuned for building web applications with Web storage, 2D drawing, offline support, sockets, and threads, and more. And to speak this language, you've got to go beyond HTML5 markup and into the world of the DOM, events, and JavaScript APIs. Now you probably already know all about HTML markup, otherwise known as structure, and you know all about CSS style presentation, but what you've been missing is JavaScript behavior. If all you know about are structure and presentation, you can create some great looking pages, but they're still just pages. When you add behavior with JavaScript, you can create an interactive experience even better: you can create full-blown web applications! Head First HTML5 Programming is your ultimate tour guide to creating web applications with HTML5 and JavaScript, and we give you everything you need to know to build them, including how to add interactivity to your pages, how to communicate with the world of Web services, and how to use the great new APIs being developed for HTML5. Here are just some of the things you'll learn in Head First HTML5 Programming:

Learn how to make your pages truly interactive by using the power of the DOM. Finally understand how JavaScript works and take yourself from novice to well informed in just a few chapters. Learn how JavaScript APIs fit into the HTML5 ecosystem and how to use any API in your web pages. Use the Geolocation API to know where your users are. Bring out your inner artist with Canvas, HTML5's new 2D drawing surface. Go beyond just plugging a video into your pages and create custom video experiences. Learn the secret to grabbing five megabytes of storage in every user's browser. Improve your page's responsiveness and performance with Web workers. And much more.
