Progress in Elliptic and Parabolic Partial Differential Equations A

Alvino, P Buonocore, V Ferone, E Giarrusso, G Trombetti, S Matarasso, 1996-05-15 This Research Note collects reports of the invited plenary addresses given during the conference Elliptic and Parabolic Partial Differential Equations and Applications held in Capri Italy 19 23 September 1994 The conference was devoted to new developments in partial differential equations of elliptic and parabolic type and to their applications in various fields

Progress in Holomorphic Dynamics Hartje Kriete, 1998-05-20 In the last few decades complex dynamical systems have received widespread public attention and emerged as one of the most active fields of mathematical research Starting where other monographs in the subject end *Progress in Holomorphic Dynamics* advances the theoretical aspects and recent results in complex dynamical systems with particular emphasis on Siegel discs Organized into four parts the papers in this volume grew out of three workshops two hosted by the Georg August Universit t G ttingen and one at the Mathematisches Forschungsinstitut Oberwolfach Part I

addresses linearization The authors review Yoccoz's proof that the Brjuno condition is the optimal condition for linearizability of indifferent fixed points and offer a treatment of Perez Marco's refinement of Yoccoz's work Part II discusses the conditions necessary for the boundary of a Siegel disc to contain a critical point builds upon Herman's work and offers a survey of the state of the art regarding the boundaries of Siegel discs Part III deals with the topology of Julia sets with Siegel discs and contains a remarkable highlight C L Petersen establishes the existence of Siegel discs of quadratic polynomials with a locally connected boundary Keller taking a different approach explains the relations between locally connected real Julia sets with Siegel discs and the abstract concepts of kneading sequences and itineraries Part IV closes the volume with four papers that review the different directions of present research in iteration theory It includes discussions on the relations between commuting rational functions and their Julia sets interactions between the iteration of polynomials and the iteration theory of entire transcendental functions a deep analysis of the topology of the limbs of the Mandelbrot set and an overview of complex dynamics in higher dimensions

Conjugate Gradient Type Methods for Ill-Posed Problems Martin Hanke, 2017-11-22 The conjugate gradient method is a powerful tool for the iterative solution of self adjoint operator equations in Hilbert space This volume summarizes and extends the developments of the past decade concerning the applicability of the conjugate gradient method and some of its variants to ill posed problems and their regularization Such problems occur in applications from almost all natural and technical sciences including astronomical and geophysical imaging signal analysis computerized tomography inverse heat transfer problems and many more This Research Note presents a unifying analysis of an entire family of conjugate gradient type methods Most of the results are as yet unpublished or obscured in the Russian literature Beginning with the original results by Nemirovskii and others for minimal residual type methods equally sharp convergence results are then derived with a different technique for the classical Hestenes Stiefel algorithm In the final chapter some of these results are extended to selfadjoint indefinite operator equations The main tool for the analysis is the connection of conjugate gradient type methods to real orthogonal polynomials and elementary properties of these polynomials These prerequisites are provided in a first chapter Applications to image reconstruction and inverse heat transfer problems are pointed out and exemplarily numerical results are shown for these applications

Topological Vector Spaces, Algebras and Related Areas A Lau, I Tweddle, 1995-05-15 This volume contains the proceedings of an international conference held to mark the retirement of Professor Taqdir Husain from McMaster University The contributions covering topics such as topological vector spaces topological algebras and related areas reflect Husain's research interests and present surveys and new research in the topics of the conference

The Theory of Quantaloids K I Rosenthal, 2014-07-22 This book presents a detailed account of the theory of quantaloids a natural generalization of quantales The basic theory examples and construction are given and particular emphasis is placed on the free quantaloid construction as well as on the perspective provided by enriched categories

Boundary-field Equation Methods For a Class of Nonlinear Problems Gabriel N

Gatica, George C Hsiao, 1995-09-29 This book is the first to offer a general discussion on the coupling methods for nonlinear problems and provides all material necessary for an introductory course on the subject Readers are assumed to have only a basic knowledge of applied functional analysis and partial differential equations at graduate level This book can be used as an advanced graduate text as well as a reference for specialists working in the areas of partial differential equations boundary integral equations and scientific computing This book will be of particular interest to students and researchers in applied mathematics numerical analysis and partial differential equations **Rings and Radicals** R. Wiegandt, J.W.

Gardner, Shao-Xue Liu, 1996-04-18 First published in 1996 Routledge is an imprint of Taylor Francis an informa company

Real and Complex Singularities W. L. Marar, 1995-10-18 Much progress has been made recently in a number of areas by the application of new geometrical methods arising from advances in singularity theory This collection of invited papers presented at the 3rd International Workshop on Real and Complex Singularities held in August 1994 at ICMSC USP Sao Carlos documents the geometric study of singularities and its applications Nonlinear Dynamics and Pattern Formation in the Natural Environment A Doelman, A Van Harten, 2022-09-16 This Research Note aims to provide an insight into recent developments in the theory of pattern formation In the last decade there has been considerable progress in this field both from a theoretical and a practical point of view Recent mathematical developments concern the study of the nonlinear stability of systems at near critical conditions by an appropriate system of modulation equations The complexity of the original problem can be reduced drastically by this approximation Moreover it provides unifying point of view for a wide range of problems New applications of the theory arise in a multitude of scientific areas such as hydrodynamics reaction diffusion problems oceanography meteorology combustion geophysical and biological morphodynamics and semi conductors

This book is intended to show the interactions between the mathematical theory of nonlinear dynamics and the study of pattern generating phenomena in the natural environment There is an intimate relationship between new insights in the mathematical aspects of nonlinear pattern formation and the comprehension of such phenomena Therefore there are two partly overlapping main themes one in which the emphasis is on generally applicable mathematical theories and techniques and one in which the phenomenology of pattern evolution in various areas is discussed The book comprises 19 contributions by experts in the field Although the emphasis changes considerably from paper to paper in each contribution the same two themes are present all the authors have aimed to achieve a suitable balance between the mathematical theory and the physical phenomena **Mathematical Problems in Semiconductor Physics** P A Marcati, P A Markowich, Roberto

Natalini, 1995-12-15 This collection of papers arises from a workshop held at the Istituto per le Applicazioni del Calcolo of the Italian CNR The first part of the book includes the material covered by three mini series of lectures at graduate level on some advanced mathematical topics in semiconductor physics The second part of the book includes more specialized topics covered by invited speakers in their individual lectures **Elliptic Operators, Topology, and Asymptotic Methods** John

Roe,2013-12-19 Ten years after publication of the popular first edition of this volume the index theorem continues to stand as a central result of modern mathematics one of the most important foci for the interaction of topology geometry and analysis Retaining its concise presentation but offering streamlined analyses and expanded coverage of important exampl

Dynamics of Nonlinear Waves in Dissipative Systems Reduction, Bifurcation and Stability G Dangelmayr,K

Kirchgassner,B Fiedler,Alexander Mielke,1996-08-01 The mathematical description of complex spatiotemporal behaviour observed in dissipative continuous systems is a major challenge for modern research in applied mathematics While the behaviour of low dimensional systems governed by the dynamics of a finite number of modes is well understood systems with large or unbounded spatial domains show intrinsic infinite dimensional behaviour not a priori accessible to the methods of finite dimensionaldynamical systems The purpose of the four contributions in this book is to present some recent and active lines of research in evolution equations posed in large or unbounded domains One of the most prominent features of these systems is the propagation of various types of patterns in the form of waves such as travelling and standing waves and pulses and fronts Different approaches to studying these kinds of phenomena are discussed in the book A major theme is the reduction of an original evolution equation in the form of a partial differential equation system to a simpler system of equations either a system of ordinary differential equation or a canonical system of PDEs The study of the reduced equations provides insight into the bifurcations from simple to more complicated solutions and their stabilities
