

This Book's Sources

The title mixes three powerful ideas. It mentions process improvement with agile methods and the reference model for software process improvement MIP-MPS-5M¹¹. Any three of these powerful ideas has merit to have its own book, so that writing only one, and in the short time frame we had as authors, necessarily requires constant choices. This is then a book about the activities that take place when one performs consulting in process improvement; even when the main character in the story that allows us to create a connecting thread is an internal employee, Marcella, who works in the company she has helped found, her activities are those of a first rate consultant.

Marcella is a little bit the heroine of the British novel of the XIX century, in that she is intelligent, knows what she wants, and how to get it. She is the example of leadership in this book, even when her partners and other fellow travelers are good managers and excellent professionals, such with his own techniques, it is Marcella who leads by example, who questions the status-quo, who, in the end, leads the Tattini-Tattini company to the highest levels of excellence. As we were writing the book, it was with Marcella with whom we liked to identify ourselves the most, because in the end hers was the character with the biggest success. Lessons that need to be learned from this book are all in Marcella's name.

This is not a book on consulting. There exist and are very good, written by consultants much better than us. Even there, it contains lots of guidance on how to perform the important tasks, those that lead to real change, packed into the movements of the characters. There is also a wealth of techniques that are usually innovative, one way or another, in our activities as consultants. Chapter 2 shows the way by presenting variants of continuous improvement methods, ending in Lean. We recommend extra readings to fully understand it and make better use of it.

It is not a book about the MPS, we will rather have the reader learn about this robust model in its golden and the authorial chains being offered. However, there is nothing in the book that has not been written with it in mind¹². The whole story of Tattini-Tattini, its comings and goings with the agile techniques, frequently presented for discussion before they have been profited from, illustrate our particular point of view about maturity models: it is necessary to have a global vision of your destination for the road to be covered with ease.

Neither is this a course on agile methods. The reader must understand that to introduce an agile method in any organization it is a requisite to have a consultant or mentor that guides you through the implementation on a daily basis. To produce an agile organization, starting from one that is not, requires experience and being able to adapt to the needs and culture of the organization.

And even when this is not a book about organizational change, we did take many concepts from this discipline. In any case, the literature about organizational change is so vast and rich that we would do it a disservice if we tried to compress it into a few pages.

The book intends to describe the consulting activities that take place in many organizations. We have chosen a presentation scheme that is midway between the technical book and the telling of a story,

¹¹ In this edition, consideration to MPS and the CMME-DEV, which is the model used as inspiration for the MPS, has been given.
