Fundamentals of Quantum Chemistry Michael P. Mueller, 2007-05-08 As quantum theory enters its second century it is fitting to examine just how far it has come as a tool for the chemist Beginning with Max Planck's agonizing conclusion in 1900 that linked energy emission in discreet bundles to the resultant black body radiation curve a body of knowledge has developed with profound consequences in our ability to understand nature In the early years quantum theory was the providence of physicists and certain breeds of physical chemists While physicists honed and refined the theory and studied atoms and their component systems physical chemists began the foray into the study of larger molecular systems Quantum theory predictions of these systems were first verified through experimental spectroscopic studies in the electromagnetic spectrum microwave infrared and ultraviolet visible and later by nuclear magnetic resonance NMR spectroscopy Over two generations these studies were hampered by two major drawbacks lack of resolution of spectroscopic data and the complexity of calculations This powerful theory that promised understanding of the fundamental nature of molecules faced formidable challenges The following example may put things in perspective for today's chemistry faculty college seniors or graduate students As little as 40 years ago force field calculations on a molecule as simple as ketene was a four to five year dissertation project

MOLECULAR STRUCTURE AND SPECTROSCOPY, Second Edition ARULDHAS, G., 2007-06-09 Designed to serve as a textbook for postgraduate students of physics and chemistry this second edition improves the clarity of treatment extends the range of topics and includes more worked examples with a view to providing all the material needed for a course in molecular spectroscopy from first principles to the very useful spectral data that comprise figures charts and tables To improve the conceptual appreciation and to help students develop more positive and realistic impressions of spectroscopy there are two new chapters one on the spectra of atoms and the other on laser spectroscopy The chapter on the spectra of atoms is a detailed account of the basic principles involved in molecular spectroscopy The chapter on laser spectroscopy covers some new experimental techniques for the investigation of the structure of atoms and molecules Additional sections on interstellar molecules inversion vibration of ammonia molecule fibre coupled Raman spectrometer Raman microscope supersonic beams and jet cooling have also been included Besides worked out examples an abundance of review questions and end of chapter problems with answers are

included to aid students in testing their knowledge of the material contained in each chapter Solutions manual containing the complete worked out solutions to chapter end problems is available for instructors

The Calculation of Rotational Energy Levels and Rotational Line Intensities in Diatomic Molecules Jon T. Hougen,1970 Procedures are described in this pedagogical monograph for making quantum mechanical calculations of rotational energy levels and rotational line intensities in diatomic molecules The procedures are illustrated by sample calculations A familiarity with the material of this report should enable a practicing electronic spectroscopist to carry out though in a rather mechanical way his own theoretical calculations for molecules under experimental investigation The material of this report is aimed at electronic spectroscopists who have had the equivalent of one semester of graduate level quantum mechanics Author *Molecular Spectroscopy* R F Barrow,Derek A Long,D J Millen,2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
