Cosmology, Physics and Philosophy Benjamin Gal-Or, 2013-04-18 by Sir Karl Popper This is a great book and an exciting book I say so even though I happen to disagree with the author in many minor points and one or two major points Some of the minor points are merely terminological and therefore very minor I dislike the term dialectic because of its use since Hegel and Marx and I dislike the term gravitism perhaps without a good reason Thus I dislike the name which Professor Gal Or has given to his theory But the theory seems to me a great and a very beautiful theory so far as I can judge Other minor points of disagreement are connected with Gal Or's original and remarkable views of the great philosophers including Spinoza and Kant A major point of disagreement is that Gal Or following Einstein is a scientific determinist while I cannot but regard determinism as a modern superstition Of course he may be right and I may be completely mistaken I mention these critical points rather in order to emphasize how strongly I am impressed by Professor Gal Or's great book Even in the very unlikely case that wherever we disagree he should be in the wrong and I right even if that should be the case which is improbable in the extreme it would remain a great book readable worth reading and enlightening with a most fascinating cosmological story of time expansion and gravitation
