*Biorational Control of Arthropod Pests* Isaac Ishaaya, A. Rami Horowitz, 2009-08-28 For nearly 50 years pest control was mostly based on broad spectrum conventional insecticides such as organochlorines organophosphates carbamates and pyrethroids However the severe adverse effects of pesticides on the environment problems of resistance reaching crisis proportions and public protests led to stricter regulations and legislation aimed at reducing their use Ways to reduce the use of synthetic pesticides in plant protection and to use more alternative and novel methods for pest control or biorational control are the challenges of pest control for the twenty first century The term biorational biological rational pesticides can be defined as the use of specific and selective chemicals often with a unique modes of action that are compatible with natural enemies and the environment with minimal effect on n target organisms Biorational control is based on a diversity of chemical biological and physical approaches for controlling insect pests which results in minimum risk to man and the environment

*Handbook of Pest Management* John R. Ruberson, 1999-07-09 Provides a detailed summary of pest management principles and techniques outlining a broad selection of critical issues regarding current practice and future technology in this area Discusses the role of soils weather and surrounding habitats in regulating pest occurrence and severity
