A Cultural History of the Senses in the Renaissance Herman Roodenburg, 2014-10-23 We know the Renaissance as a key period in the history of Europe It saw the development of court and urban cultures witnessed the first global voyages of discovery and gave rise to the Reformation and Counter Reformation It also started with the invention of oil painting linear perspective and moveable type all visual technologies Does that mean as has been suggested that the Renaissance stands for the ascendancy of the eye If so then what happened to the sensory extremes which the famous Dutch historian Johan Huizinga still perceived in the 15th century Did they simply disappear Or is there another history to be told a history of a surprising continuity not only of the sense of hearing but also of the lower senses those of taste smell and touch And was the Renaissance not first and foremost a time of deep sensory anxiety This volume assembling nine outstanding specialists seeks to answer these questions while offering a lively and sensational portrait of the period *A Cultural History of the Senses in the Renaissance* presents essays on the following topics the social life of the senses urban sensations the senses in the marketplace the senses in religion the senses in philosophy and science medicine and the senses the senses in literature art and the senses and sensory media

The Senses of Touch Mark Paterson, 2020-06-07 Touch is the first sense to develop in the womb yet often it is overlooked *The Senses of Touch* examines the role of touching and feeling as part of the fabric of everyday embodied experience How can we think about touch Problems of touch and tactility run as a continuous thread in philosophy psychology medical writing and representations in art from Ancient Greece to the present day Picking through some of these threads the book feels its way towards writing and thinking about touch as both sensory and affective

experience Taking a broadly phenomenological framework that traces tactility from Aristotle through the Enlightenment to the present day the book examines the role of touch across a range of experiences including aesthetics digital design visual impairment and touch therapies The Senses of Touch thereby demonstrates the varieties of sensory experience and explores the diverse range of our senses of touch Heinz Werner and Developmental Science Jaan Valsiner, 2005 Heinz Werner 1890 1964 was one of the three key developmental psychologists of the 20th century along with Jean Piaget and Lev Vygotsky This book is a new exploration of Werner's ideas and their social contexts in Vienna in his student years in Hamburg up to 1933 followed by the years of transit as an immigrant to America at times of economic depression finally culminating in his establishment of the prominent Clark tradition in American psychology in the 1950s The book offers an in depth analysis of Werner's ideas as they were originally formulated in Vienna and Hamburg and how they were changed by North American influences Werner's pivotal role between European and American intellectual traditions is illuminated through the use of rich memories of his former students unique documents from Werner's personal library at Clark and analyses of links with other European traditions in philosophy and biological sciences The European period prior to 1933 in Werner's academic life is found to be definitive for Werner's contributions to science The ideas developed in his early career continued in the form of a productive empirical research program in the 1950s at Clark An analysis of the social intellectual climate of the development of psychology in America in the 1950s is a special feature of this book that will further enhance an understanding of Werner's unique contribution This book will be of interest to developmental psychologists sociologists and historians of science philosophers practitioners working in special education and neuropsychology and for general readers interested in the history of ideas and life courses of scientists **Making Sense Of The Senses** Tobias Wibble, 2022-06-09 Making Sense of the Senses provides an easily understandable and engaging overview of the senses The book allows readers insights into how humans and other animals perceive the world reflecting a level of knowledge similar to that acquired by studying neuroscience at an undergraduate level In order to offer an accessible introduction to the science it uses relatable examples to uncover the history evolution and biological principles of the way we see smell hear taste touch and more Rather than only focusing on the five primary senses you can see on the cover Making Sense of the Senses dives deep into the various methods through which life across the planet surveys the world and guides the reader through the lesser known methods through which we humans interpret our surroundings In this way we come across some amazing abilities that we often forget we possess Humans are nevertheless rather average creatures compared to many sensory specialists So when we compare our relatively modest capabilities to those of other species across the animal kingdom we are forced to yield our anthropocentric sense of supremacy This book will introduce how biological life developed the capacity to detect magnetic fields radioactivity and many more phenomena that until recently were inaccessible to humans By contextualising and comparing how the senses operate this book covers the sensory systems in a way no popular science

book has previously done If you are starting your career in neuroscience or simply want to learn more about the ways our biology guides us through life Making Sense of the Senses will change the way you think about our perception of the world
